World News Business Summary

## Guerrillas are asked to let the refugee Kurds return

Allied military commanders urged Kurdish guerrillas not to hinder civilians who wish to return to the Iraqi town of Zakho where a protected refugee camp has been set up.

President Turgut Ozal of Turkey said it was essential for the allies to remain in northern Iraq. Page 20

## Earthquake kills 24

A powerful earthquake hit the southern Soviet republic of Georgia, killing at least 24 people. There was a second tremor five hours later.

## France apologises

French prime minister Michel Rocard apologised to New Zealand in Wellington for the bombing of the Greenpeace flagship Rainbow Warrior but said nuclear testing in the South Pacific would continue.

## Ambassador resigns

An inquiry into alleged corruption in Western Australia claimed its first political victim when Mr Brian Burke, a former Labor premier of Western Australia, resigned as ambassador to Ireland. Page 4

## Mines peace hope

Russian leader Boris Yeltsin is expected to persuade coalminers in the Kuzbas today to end their strike, which is already showing signs of faltering. Page 3

## UN force for Sahara

The UN Security Council unanimously voted to set up a UN force to oversee a ceasefire in Western Sahara this year and a referendum early in 1992.

## Protest by fire

A South Korean student set himself on fire and riot police fired teargas when nearly 10,000 protesters marched in Seoul over the death of a student beaten by security forces.

## Siren that failed

A siren that would have warned residents of Andover, Kansas, of a tornado which killed 14 people last Friday failed to go off despite four attempts to activate it.

## Taiwan olive branch

The first formal Taiwanese delegation to visit the Chinese mainland in four decades arrived in Peking following Taiwan's National Assembly vote to end 48 years of emergency rule. Page 4

## Princess skips lunch

Britain's Princess Anne missed lunch and urged others to do the same - and donate the money to help 27 million Africans facing starvation.

## Bombs hit Turkey

Gunmen killed three Turkish provincial officials and seven bombs went off in Istanbul and the port of Adana.

## Town recaptured

Ethiopia says its troops recaptured the strategic town of Ambo, 55 miles west of Addis Ababa, after routing rebel forces which took it last week.

## US bases warning

The Philippines warned the US it would have to withdraw its forces if the two sides cannot bridge deep differences.

## Death sentences

China sentenced three men to death for looting an army arsenal in the Tibetan capital of Lhasa and killing a guard.

## Salvador reforms

El Salvador's National Assembly will go into emergency session over the next two days to adopt a package of constitutional reforms aimed at ending the bloody 11-year civil war.

## Nobel millionaires

This year's Nobel Prize winners will become instant dollar millionaires. The Nobel Foundation said it had raised the 1991 awards by 50 per cent.

## France calls for continued EC control on car imports

France's industry minister called on the European Commission to back EC carmakers' proposals for continuing controls on Japanese car sales in Europe.

Today, all 17 Commissioners will discuss Japanese car imports for the first time since October, with the aim of informing EC governments of their proposals by the middle of next month and restarting negotiations with the Japanese. Trade, Page 6

GALERIES Lafayette, owner of elegant Paris department store, appears likely to be forced to bid for rival Nordvilles Galeries after buying 18.4 per cent of its capital from Proventus, Swedish retailing group. Page 21

INTERNATIONAL Paper, world's biggest paper company, urged Japan to open its paper trade to help develop international trade and ally the mounting frustration of the US Congress. Page 6

# Washington talks fail to produce agreement on debt forgiveness

## G7 divided over official debts

By Stephen Fidler, Euromarkets Correspondent, in Washington

ATTEMPTS to find agreement among the Group of Seven industrialised countries at their Washington meeting over the limiting of official debt forgiveness have failed.

As a result, the customary reference to the international debt strategy was absent from the G7 communiqué agreed on Sunday.

Debate on the issue followed agreement by the Paris Club of creditor governments to write off at least 50 per cent of Poland's official debts. A similar deal is expected to be agreed for Egypt.

Mr Pierre Bérégovoy, French finance minister, said yesterday that he had "categorically refused" to agree to a proposed statement on international debt. The statement would have attempted to "ring fence" the deals for Poland and Egypt.

Forgiveness of government-to-government debt had previously only been available to the poorest countries, mainly in Africa. Poland and Egypt are both defined as lower middle-income debtors.

Mr Bérégovoy said he agreed there should be no generalised debt forgiveness, but that there were other lower middle-income countries - particularly those African countries aiming for more democracy - which might deserve debt forgiveness on a case-by-case basis. French officials are thought to have been pushing for such a deal in mind: Ivory Coast, Cameroon, Senegal and Gabon.

Some industrialised country governments, in particular Japan, are concerned that debt forgiveness for Poland might create an awkward precedent. Japanese officials have said that countries which get debt relief from Japan will find it hard to get new loans from the Japanese government.

The US, which has pressed

US treasury secretary Nicholas Brady yesterday expands on the communiqué which failed to mention debt strategy

for debt relief for both Poland and Egypt, has distinguished the two by pointing out that they carry the highest level of official debt per capita of any of the developing countries.

The issue of further official debt forgiveness is unlikely to go away. Britain and others are pressing for deeper and more sustained debt relief for the poorest countries, mainly in Africa. The so-called Trinidad Terms, suggested last autumn by Mr John Major, Britain's prime minister and

former chancellor of the exchequer, would relieve up to two-thirds of the debts of the poorest countries.

This proposal is expected to be backed by a meeting today of the Development Committee, the joint group of the International Monetary Fund and World Bank which addresses development issues.

The UK government would like to have agreement on the Trinidad Terms to announce in time for the London economic summit in July.

# UK economic recovery 'round the corner'

By Peter Norman, Economics Correspondent, in Washington

MR Norman Lamont, UK chancellor of the exchequer, said yesterday that economic recovery in Britain was "round the corner".

Britain was making "excellent progress" in cutting inflation, Mr Lamont told journalists after addressing the policy-making Interim Committee of the International Monetary Fund in Washington.

"The fact we are getting so far inflation down to 10 per cent so far removed from the strongest

countries in Europe within a very short period of time," he said, adding that that would result in a very significant strengthening of the UK position.

Mr Lamont said he could not be precise about the exact timing of the recovery, although he thought it would be around the end of the second quarter. In the UK, as elsewhere, lower inflation and lower interest rates would be powerful forces for recovery. The "key lesson

of the late 1980s" was that firm control over inflation was a precondition for sustained growth.

He repeated the government's position that it would cut interest rates as and when reduced inflation created the necessary flexibility for such action.

He dismissed as "imaginative" a Sunday newspaper report that interest rates would be cut again next month. "I have made no commitment on

cutting rates," he said. Mr Lamont's upbeat assessment of Britain's economic prospects came after a period in which economic news has been almost universally bad. He said that in the coming months, the official statistics - particularly those for lagging indicators such as employment and investment - would continue to provide evidence of the past weakness of the economy.

But he stressed the importance of distinguishing such

backward-looking indicators from forward-looking signs that were now emerging. These, he said, had begun to show a marked improvement in consumer and business confidence.

Mr Lamont admitted that unemployment would continue to rise during this year, although how much would depend on the level of wage settlements and on the effectiveness of labour market

# Savimbi signals end to Angola's civil war with ceasefire signing

By Michael Holman, Africa Editor, in London

AN END is in sight to the 15-year civil war in Angola, which has cost hundreds of thousands of lives and has devastated a country rich in oil, diamonds and coffee.

Mr Jonas Savimbi, leader of the Unita rebel movement, said in London yesterday that agreements leading to an internationally monitored ceasefire and multi-party elections were due to be finalised in Lisbon today.

A formal signing ceremony will take place at the end of May, probably in Lisbon, where officials from Unita and the Angolan government are currently meeting.

Western diplomats last night confirmed that an end was in sight to a conflict which, from the start, was fuelled by super-power rivalries.

The rapprochement between Washington and Moscow, the Namibian settlement, which ended South African military support for Unita, and saw the withdrawal of a 50,000 strong pro-government Cuban force from Angola, and war-weary

both parties to the negotiating table.

But the diplomats stressed that implementation of the agreement, which includes the integration of rival armies during an 18-month transition period before elections, would be fraught with difficulties.

The apparent breakthrough follows protracted talks co-ordinated by Portugal, the former colonial power, and attended by officials from the US, the main supporter of Unita, and the Soviet Union, once a staunch ally of President Jose Eduardo dos Santos of Angola's ruling MPLA party.

The Unita leader, speaking in London on the eve of a meeting with Mr Douglas Hurd, Britain's foreign secretary, said he expected Mr Javier Pérez de Cuellar, UN secretary general, Mr James Baker, US secretary of state, and Mr Alexander Bessmertnykh, Soviet foreign minister, would attend the formal signing.

In his outline of the agreements to journalists in London, Mr Savimbi said the US, the

Soviet Union and the UN would be helping to monitor the transition process.

During the transition, which would end with elections in September, October or November next year, the MPLA government "will continue to deal with normal affairs," said Mr Savimbi.

But a "joint political and military committee", comprising equal numbers of MPLA and Unita officials, will "deal with the whole process leading to the ceasefire, elections, stability, and internal security," said Mr Savimbi, adding that he expected to arrive in Luanda in early July.

Up to now he has been based in Jamba the rebel headquarters in southern Angola.

The commission will also oversee the creation "of one national army" preferably no larger than 50,000, in which Unita and MPLA would be equally represented.

The airforce and navy will remain in MPLA hands, under close independent monitoring. Angolan struggles for fresh start, Page 5

# BANK ON A BANK THAT'S DECISIVE.

The right decision at the right time. Our combination of competent personnel and an unbureaucratic organization has made us one of the largest banks in Germany, with a balance sheet total of over DM 124,5 billion. If you're looking for an international business partner, we have the decisiveness you can bank on.

## EUROPEAN NEWS

## Greece decides to swallow the EC medicine

By Kerin Hope in Athens

A BOATLOAD of Greek tourists on a trip to the island of Delos recently looked surprised to be charged for visiting the ruins of Apollo's sanctuary. But the murmurs of protest were few as they rummaged for thousand-drachma notes. One woman told her sons, with only a hint of irony: "You see, now you're real Europeans."

Threatened with a summons from the European Court of Justice for discriminating against other EC citizens, Greece has dropped its practice of making only foreigners pay at museums and ancient sites. The change was diplomatically timed to coincide with Easter, when the first wave of foreign tourists rolled in.

The conservative government is trying hard to uproot the prevailing image of Greece as an uncooperative Community partner, dependent on EC hand-outs because it is unwilling or unable to put its economy in order.

"It's true Greece was remiss about everything from applying for funds to answering letters. We didn't participate

fully. But that's changed. Now we want to make a real contribution," says Mr George Papastamkos, undersecretary for EC affairs.

However, Greece is now being criticised for its reluctance to lift a veto on Ecu600m (2414m) in economic aid for Turkey, even after being granted a special balance of payments loan earlier this year. The veto was imposed in the early 1980s in protest at the Turkish military presence in northern Cyprus.

Foreign Ministry officials in Athens are reluctant to comment on suggestions that the government may soon agree to the Turkish aid.

But the real test of Greece's future relationship with the Community will be the progress made on restructuring its economy under the terms of its Ecu600m loan.

Greece has undertaken to reduce inflation from 23.8 per cent at the end of last year to 9.5 per cent by 1993 and to cut government borrowing from 13.1 to 1.5 per cent of gross national product. The current account deficit must be cut

## Greece

Inflation (annual % change)

Central government borrowing as a % of GDP

Current account deficit as a % of GDP

Source: IMF, EU

from 6 to 3 per cent of GNP.

The three-year stabilisation programme is intended to prepare the drachma for entry to the exchange rate mechanism by the end of 1993, in time for Greece to join in the second phase of economic and monetary union.

Other conditions for the loan included an overhaul of the pension system, sweeping tax reforms and a 10 per cent cut in the civil service payroll. About one-third of spending goes to cover the public sector wage and pensions bill.

With another 40 per cent earmarked for servicing the public debt, now over 100 per cent of GDP, there is little scope for state investment.

The government intends to use the EC loan to help cover the Greek contribution to infrastructure projects included in the Community's regional programme, calculating that increased private capital inflow will cover the current account shortfall.

"We're on track with most projects, and in some cases the Commission has gone out of its way to find extra financing," says Mr Achilles Karamanlis, minister of public works.

As a result, a long-delayed project to help develop north-western Greece through construction of a \$400m bridge across the western end of the Corinth Gulf should go ahead later this year.

Still, Community surveillance of Greece's economic performance will be strict: the terms of a similar loan in the mid-1980s were largely ignored.

On the basis of first-quarter performance, Greek officials will be able to report progress on containing inflation - now likely to fall below this year's target of 17.5 per cent. However, there are problems with reducing the deficit as public sector corporations are still overspending, while the government's revenue forecast

now looks too ambitious.

Plans to raise at least Dr200bn from privatising 20 debt-plagued companies run by the state-controlled Industrial Reconstruction Organisation will be curtailed. Potential buyers have been slow to appear.

Issues of state land bonds, convertible into building plots, were expected to bring in another Dr150bn. They will be delayed until later this year because local authorities in several designated areas are raising objections.

But when it comes to tax evasion, the Finance Ministry is on the warpath. A new tax inspector has arrived on the island of Mykonos, opposite Delos, which attracts about 800,000 tourists every summer and still keeps up its reputation for riotous nightclubs.

"He seems like a tough character," says a bar owner, snuffing the night's takings before deciding how much to ring up on the cash register.

## Sweden tires of paying for social democracy

By Robert Taylor in Stockholm

SWEDEN IS one of the few countries that still seems to take May Day seriously. But tomorrow, as the red flags unfurl, thousands take to the streets and the faithful sing the Internationale, many Social Democrats must wonder whether the party that has dominated Sweden for nearly 60 years is not in terminal decline.

For Mr Ingvar Carlsson, the prime minister, in particular, tomorrow promises to be a bitter day. As he tries to rally the troops less than five months before the general election, support for his Social Democratic party has fallen to a record low of 28.7 per cent, according to a recent poll.

Among voters under the age of 30, the party has a mere 17.5 per cent support, only two points more than the three-month-old maverick right-wing New Democracy party. Even among blue-collar trade unionists, fewer than 40 per cent back the Social Democrats. And in the big cities the party faces annihilation.

The collapse of support has come fast. Only three years ago 48.2 per cent voted for them at the polls.

The party's troubles are not based on political indecisiveness or lack of firm action. The

Social Democrats have not fallen apart or drifted on to the rocks. Indeed, the under-estimated premier, who took over after Mr Olof Palme's assassination in February 1986, has shown patience and finesse in establishing cross-party agreements that have taken Sweden in a more liberalising, free market direction.

On issue after issue Mr Carlsson has been able to break through the policy impasse. After years of talk, the tax reform was implemented, shifting the burden from incomes on to goods and services. An earlier commitment to start phasing out the country's nuclear reactors from 1995 threatened to devastate industry, but Mr Carlsson achieved a compromise whereby nuclear power will not go until a credible alternative exists.

Two other lingering issues have been resolved. Far-reaching commercial television is coming to Sweden at last, and the much-debated road and rail bridge is to be built over the waters of the Öresund linking Sweden with Denmark.

Moreover, Mr Carlsson's government intends, after surprisingly little argument, to apply for Swedish membership of the European Community this summer.

Yet none of this has made any difference to the poll ratings. Perhaps some voters reason that if Sweden is becoming more liberal they might as well vote for the most liberal-oriented parties. Others are upset by what they see as the abandonment of cherished Social Democratic commitments to social justice and equality.

The party has also lost its reputation for competent economic management. The so-called Third Way economic strategy of the 1980s, between the free market and the Soviet-style command economy, has failed, with raging wage inflation, sluggish productivity, balance of payments deficits, worsening competitiveness, rising unemployment and stagnant living standards.

The recently published memoirs of the former finance minister, Mr Kjell-Olof Feldt, point to another important reason for the decline of the Social Democrats. Interest groups such as the powerful LO blue-collar union movement have exercised too great an influence over the party, demanding more resources for the huge welfare state, which Sweden could not afford.

Mr Carlsson can draw comfort from one thought: no coherent political alternative exists to the Social Democrats, who remain the largest party.

The opposition is split seven ways. Two of the parties - New Democracy and the Christian Democrats - look set to win seats in parliament for the first time this autumn. The other three non-Socialist parties - the Moderates, the Liberals and the Centre which worked together in government between 1976 and 1982 - are no longer united, though the Moderates and Liberals have reached a common economic strategy.

After the elections, therefore, Sweden may well have a non-Socialist coalition government that is not strong enough to take the necessary tough economic decisions.

## Finland has second thoughts on EC entry

By Robert Taylor

FINLAND IS reassessing whether to apply to join the European Community, amid signs of a collapse in the negotiations between the EC and European Free Trade Association on the creation of a European Economic Area (EEA).

The outgoing foreign minister, Mr Pertti Paasio, a Social Democrat, said at the weekend that Finland ought to be ready to seek EC membership. His party, which is now the country's main opposition following last month's general election, has not yet taken a view but is expected to line up behind the call for a Finnish application.

The new coalition government between the Centre party and the Conservatives is being more cautious. But in its programme, announced at the weekend, it uses a form of words which suggests it is also ready to drop the old resistance to the idea of Finnish membership of the EC.

It said the government would "strive for a solution which in the best possible way protects our national interests."

Mr Esko Aho, the new Centre party prime minister, said yesterday the government still hoped for a successful outcome to the EC-EFTA talks. But, with Switzerland threatening to

walk out and apply for EC membership alongside Sweden and Austria, Finland may change its mind. Finland's president, Mr Mauno Koivisto, is known to be concerned at the prospects of a break-up of the EEA talks.

## The best output at hand.

There really are only two ways to get top quality without leaving your desk.

The first is to get yourself promoted to Chairman so you can get a desk so huge it can comfortably house a medium sized print works. The other is fortunately much simpler: get yourself a personal printer from Hewlett-Packard.

They've just unveiled their most advanced 4 ppm model: the brand new HP LaserJet III. It uses HP advanced PCL5 printer language for font scaling and vector graphics to create high impact documents. And with Resolution Enhancement technology it produces the blackest blacks, the sharpest

letters and smoothest curves ever seen on such a compact laser printer.

On the other hand, the HP DeskJet 500 inkjet printer offers laser quality output at a dot matrix price. And yet

the HP DeskJet 500 is so quiet you can hear a pin drop while you produce superb documents at your desk.

In fact, as you can see, the letter, spreadsheets and graphics it turns out are so impressive you could find yourself behind the Chairmans desk anyway.

For full details ring us on (0344) 368369 and we'll put you in the picture.

THE POSSIBILITY MADE REALITY.

A BUSINESS INTERNATIONAL CONFERENCE  
RETAILING AND DISTRIBUTION IN THE USSR  
MAY 14-16, 1991, HOTEL MEZHDUNARODNAYA, MOSCOW

This conference will tell you everything you need to know about retailing and distributing your product in the USSR.

There will be a select panel of: SENIOR SOVIET GOVERNMENT OFFICIALS, EXPERIENCED WESTERN BUSINESS EXECUTIVES AND, B's OWN SOVIET EXPERTS. They will discuss the practical issues involved, including: THE TARIFF SYSTEM, THE IMPORT/EXPORT SYSTEM, THE PURCHASING SYSTEM, THE DISTRIBUTION SYSTEM, WAREHOUSING, THE TRANSPORT SYSTEM, THE RETAILING SYSTEM.

HOTEL ACCOMMODATION AND VISA SUPPORT - WE MAKE IT EASY FOR YOU.

When you have completed and returned the registration form all you have to do is make travel plans for your journey. Hotel accommodation and visa requirements will be arranged by us.

REGISTRATION FORM (to be filled in by Friday 12th May)

RETAILING AND DISTRIBUTION IN THE USSR, MAY 14-16, 1991, HOTEL MEZHDUNARODNAYA, MOSCOW.

Please register me for the conference. Please send me more information about the conference.

Name: \_\_\_\_\_

Position: \_\_\_\_\_

Address: \_\_\_\_\_

Postcode: \_\_\_\_\_

Telephone: \_\_\_\_\_

Please indicate the following information of the Hotel Mezhdunarodnaya, Moscow:

Single room ☐ Double room ☐ No reservation required

Arrival Date: \_\_\_\_\_

Not earlier than 12th May 1991

Not later than 20th May 1991

REGISTRATION FEE: £1,000 (plus 17.25% VAT for UK residents).

The registration fee includes reimbursement of all out-of-pocket expenses. It does not include hotel and travel expenses.

PAID BY: ☐ I enclose a cheque for £ \_\_\_\_\_ (cheque payable to Business International Ltd)

☐ Please charge to: ☐ my American Express ☐ Visa card

Signature: \_\_\_\_\_

Printed name: \_\_\_\_\_

Please return this form to: Geoffrey de Looze, Business International, Schwanenweg 8/7, A-1030 Vienna, Austria.

Telex: +43 1 72 81 81. Fax: +43 1 72 81 81. Tel: +43 1 72 81 81.

Business International Ltd is a member of the British Travel Association and is a member of the International Air Transport Association (IATA).

## Miners likely to yield to Yeltsin

By John Lloyd in Moscow

MR BORIS YELTSIN, the Russian leader, is expected to persuade coalminers in the Kuzbas today to end their strike, which is already showing signs of faltering.

As he began his visit to the most militant coalfield last night, his supporters took to the streets to collect the 100,000 signatures necessary for his presidency - and his radical allies tried to put their qualms aside and rally behind him.

A demonstration in support of Mr Yeltsin in central Moscow last night attracted about 30,000 people, a small number compared with other such rallies in recent months. This reflected both the bad weather, and, more importantly, the deflation of the radical movement after Mr Yeltsin's signing of a statement with President Mikhail Gorbachev and eight other republican leaders which committed him to end strikes and support the government's anti-crisis plan.

The congress of the Social Democratic Party, which begins today in Leningrad, is expected to follow the Democratic Russia movement's initiative at the weekend in endorsing Mr Yeltsin's candidacy.

However, deputies to the Russian parliament said yesterday they were seeking ways to restrain him from acting impulsively in the future.

Two other names are now being mooted among deputies

Soviet premier Valentin Pavlov (right) with his Belgian counterpart, Wilfried Martens (left), in Brussels yesterday to discuss EC food aid and technical help

as possible contenders for the Russian presidency on June 12. These are Mr Vadim Bakatin, the former interior minister and now a member of Mr Gorbachev's presidential council, who achieved a reputation as a liberal; and Mr Anatoly Sobchak, Leningrad's popular and high-profile mayor.

Neither, however, has been approached formally and it is thought unlikely at the

moment that either could be persuaded to attempt to stop Mr Yeltsin's handwagon.

Slogans and flags are already being put in place on Moscow's main streets in preparation for the May Day celebrations tomorrow.

The banners carry a leafy, springtime motif with brief, anodyne slogans like "Peace - Labour - May". The flags are sky blue, an evident effort to

break with the invariable red flag of communism.

The Democratic Russia group, which had been planning a demonstration in or near Red Square, said last night it would call it off.

However, Mr Lev Shumayev, a member of Democratic Russia's Co-ordinating Council, said a massive rally would be held on May 18 for, and with, Mr Yeltsin.

## Prague cuts taxes to boost output

By Leslie Collitt in Berlin

CZECHOSLOVAKIA is lowering company turnover taxes and relaxing credit controls in a supply-side attempt to stimulate flagging industrial production.

Output fell nearly 13 per cent in the first quarter of the year compared with the same period of 1990. The largest decline was in the building industry where output fell 35 per cent.

From May 1 the highest rate of turnover tax will drop from 22 to 20 per cent. The middle band falls from 23 to 20 per cent and the lowest from 13 to 11 per cent.

The government will also loosen bank lending restrictions to help stimulate investment, according to Mr Ivan Svitek, an advisor to Mr Václav Klaus, the finance minister, who advocates radical economic reforms.

An IMF team in Prague has told the Finance Ministry that it regards economic indicators other than output favourably.

The balance of payments deficit of \$260m in the first three months was considerably better than anticipated. The deficit fell to only \$29m in March. A current account deficit of \$3.5m had been expected for the entire year. The government has responded to the lower deficit by reducing a surcharge on imports from 20 per cent to 18 per cent, also starting tomorrow. Further reductions will follow and the surcharge, strongly criticised abroad, will be eliminated shortly.

Inflation, which soared to 87 per cent in the first quarter because of a sharp cut in subsidies and resulting higher prices in January, eased to 4.7 per cent in March, when food prices dropped 2 per cent as a result of greater competition. The inflation rate is expected to be even lower this month but will rise again in May when subsidies are removed on domestic electricity and heating, Mr Svitek said.

Subsidies on rents, which typically cover half the amount paid, are to be removed this summer.

## EUROPE IN BRIEF

### Soviet soldier shot near Berlin

A Soviet soldier was found shot dead yesterday near a military exercise zone in eastern Germany, local police said. Reuter reports from Potsdam.

A spokesman for Brandenburg state police said the body of the 18-year-old soldier was discovered outside the village of Schweinitz about 100 km northwest of Berlin.

The incident occurred 10 days after a Soviet sentry shot and wounded a German army officer taking photographs of a Soviet munitions depot near Magdeburg.

The German government protested, saying the officer had not been in a restricted zone. Moscow expressed regret but said the sentry was correct to open fire.

During a visit to Soviet forces headquarters on Friday, Mr Gerhard Stoltenberg, Germany's defence minister, was pressed to provide more protection for 350,000 troops and their families from growing rightist xenophobia in the once Communist east.

### Polish share sale date given

Poland's privatisation minister, Mr Janusz Lewandowski, has announced that the country's next public share offer would open around May 20 with the sale of the Swarzedz furniture factory, writes Christopher Robinson in Warsaw.

Five per cent of the shares in Swarzedz, near the western city of Poznan, are to be awarded to three former owners of workshops taken over after the Second World War to set up the factory.

The ministry is also expected to sign an agreement at the

same time selling a 51 per cent share of the Polkolor television works to the French Thomson defence and electronics group. The purchase will cost the French company \$35m, with Polkolor valued at \$68.6m.

### Publishing chief dies

Claude Gallimard, the former head of France's most prestigious publishing house, died yesterday aged 77, Reuter reports from Paris.

Gallimard publishing house said in a statement that he had suffered a "sudden

Claude Gallimard

illness" that forced him to retire two years ago.

In 1937, Mr Claude Gallimard joined his father Gaston, who founded the Parisian publishers. He took over control of the firm in 1975 after a 38-year apprenticeship.

With his father, he was responsible for publishing works by some of France's best-known writers, including Andre Gide and Paul Claudel, brother of Camille Claudel.

### German Greens to pull together

Germany's radical Greens, ousted from parliament in all-German elections last December, said they hoped to keep the party together despite a major split, Reuter reports from Bonn.

The unruly coalition of environmentalists, pacifists and feminists entered the West German parliament in 1983 on a surge of anti-nuclear protest.

Opposition to German unification last October and the fact that major parties adopted concern for the environment, their strongest card, cost the Greens dearly

in December's elections, when they won just 4.8 per cent of the vote in western Germany.

Mr Ludger Volmer, a spokesperson, told a news conference in Bonn: "We hope to consolidate the party in order...to have a realistic chance of making a comeback in parliament in four years."

He said Greens would seek to work closely with Alliance 90, a coalition of civil rights groups and Greens who won six per cent of the votes in eastern Germany, giving them eight deputies in the 603-seat Bonn parliament.

### Havel against treaty clause

Czechoslovakia's President Vaclav Havel said a clause in a friendship treaty with the Soviet Union that would prevent his country from joining a Western security alliance was unacceptable, Reuter reports from Prague.

Havel said a Soviet clause in the treaty would exclude the possibility of either party becoming a member of a security alliance that might be directed against the other party.

The treaty - due to include security, economic and cultural cooperation for the next 10 to 15 years - will shape future relations between the two countries.

### Stasi shipped out files

Former East Germany's Stasi security police moved more than 100,000 sensitive files to other East European states during the 1989-90 anti-communist upheaval, a senior investigator said, Reuter reports from Berlin.

Mr Joachim Gauck, head of the special Bonn government agency in charge of the files since German unification, said Stasi agents shipped out the dossiers before the state security apparatus was dissolved by pro-democracy reformers.

Gauck and Alfred Einwag, the federal watchdog for data protection, said they feared the missing files could be abused and the German government should seek their return to avoid violations of the strict privacy law.

The Stasi, employing 85,000 full-time staff and hundreds of thousands of part-time informers, infiltrated every aspect of life under East Germany's Stalinist regime.

## INTERNATIONAL NEWS

# Envoy resigns over 'W.A. Inc' affair

By Kevin Brown in Sydney

AN INQUIRY into alleged corruption in Western Australia claimed its first political victim yesterday when Mr Brian Burke, a leading figure in the governing Australian Labor Party, resigned as ambassador to Ireland and the Vatican.

Mr Burke, a former Labor premier of Western Australia, is a central figure in the inquiry into the so-called "W.A. Inc" affair concerning relations between the state government and local entrepreneurs such as Mr Laurie Connell and Mr Alan Bond. He is expected to begin giving evidence today to the inquiry, which is being carried out by a royal commission appointed by Western Australia's minority Labor government.

Senator Gareth Evans, foreign minister, said Mr Burke's decision to resign "was entirely his own, and not the subject of any request or direction by the government". However, the resignation followed Senator Evans' admission that Mr Burke's position was under review because of concern over public interest in Ireland and Italy in the royal commission proceedings.

Mr Burke's resignation represents a significant political victory for the conservative opposition parties, which

have campaigned for his dismissal since the royal commission was appointed in November. Dr John Hewson, leader of the Liberals, the main opposition party, said Mr Burke's resignation was a recognition that he could not continue as ambassador while he remains "the subject of serious allegations".

The royal commission is investigating business deals over a decade between Labor governments led by Mr Burke and Mr Peter Dowding, and Liberal administrations led by Sir Charles Court and Mr Ray O'Connor.

The most serious allegations, involving relationships between politicians and leading businessmen, relate to Mr Burke's premiership between 1983 and 1988. Witnesses have given evidence that business leaders were pressed to contribute to the campaign expenses of the Labor Party, and that secret bank accounts and cash reserves were maintained by party leaders.

Mr Burke has repeatedly denied any impropriety. "Not only have I been responsible for no illegality or impropriety, I am confident the royal commission will in the final analysis find that none of my actions even approach impropriety," he said.

Brian Burke tells the press in Perth of his resignation yesterday

## Australian docks employers reject Hawke wages deal

PROSPECTS of early agreement on Australian docks reform receded yesterday after employers declined to accept a wages deal drawn up between the trade unions and Mr Bob Hawke, the Labor prime minister, Kevin Brown writes.

The deal was rejected by Conaust, the largest stevedoring company, a subsidiary of

P&O, and strongly criticised by the Association of Waterfront Employers of Labour.

The deal followed intervention by Mr Hawke to defuse a moratorium on reform announced by the Australian Council of Trade Unions (ACTU) in protest against a 2.5 per cent wages award by the Industrial Relations Commission. The award conflicted

with an earlier wages agreement between the ACTU and the government, known as the Accord, under which workers in most industries were to receive A\$12 (\$5.40) per week from May 19, together with further productivity-based payments to be negotiated at company level. The commission's refusal to approve the award places the Accord in

jeopardy, and could lead to changes in industrial relations law if the government decides to bypass the court.

The docks employers' association said it was concerned about the legal implications of accepting the deal given that it was negotiated outside Australia's centralised wage-fixing system. The association is expected

to decide today to seek further talks with the government on how the deal would affect employers' legal protection from strikes called without the approval of the courts.

A special ACTU conference will decide tomorrow whether to back a campaign of industrial action for full payment of the Accord across all industries.

## China banks lose HK share

By John Elliott in Hong Kong

THE MARKET share of Hong Kong domestic banking loans provided by the Bank of China and its 12 sister banks declined last year for the second year in succession after China's Tiananmen Square crisis when there was a sudden withdrawal of deposits.

This is believed to reflect a realisation by the Bank of China group that it is politically vulnerable to local protests in Hong Kong and should therefore adopt a conservative lending approach. Its share of loans for use in Hong Kong fell from 14 per cent in 1989 to 13 per cent, compared with 16 per cent in 1988, although the total amount of loans

rose from HK\$68bn (\$6.62bn) in 1989 to HK\$102bn last year.

Total deposits with the banks also rose sharply from HK\$193bn in 1989 to HK\$254bn last year, according to the annual report of Hong Kong's banking commissioner published yesterday. This indicates that the strength of feeling that caused people to withdraw their money in June 1989 has evaporated.

The number of banks registered in Hong Kong rose to 188 last year, up from 166 in 1989. Restricted banking licences, introduced in February last year, were issued to 13 overseas banks. Observer, Page 30

## Taiwan team visits Peking

By Yvonne Preston in Peking

THE FIRST formal Taiwanese delegation to visit the Chinese mainland in four decades has arrived in Peking following Taiwan's National Assembly vote on April 22 to end 43 years of emergency rule and abrogate wartime provisions enacted in 1948 to deal with the "suppression of the communist rebellion".

The 14-member Taiwanese delegation, representing the recently formed Taipei Straits Exchange Foundation, yesterday met officials from the Office of Taiwan Affairs under China's State Council.

China has responded to the vote by Taiwanese MPs by ending propaganda

broadcasts by the People's Liberation Army to Taiwanese troops stationed on the islands lying between Taiwan and China's Fujian province.

The way is now open for talks between Taiwan and China on direct trade and eventually even on reunification. Trade between the two has been expanding rapidly but until now it is officially supposed to have been routed through Hong Kong.

Tang Shuhel, deputy director of China's Taiwan Affairs Office, told the visitors that China adhered to the one-China principle that Taiwan was an inalienable part of China's territory.

## Dirty tricks cast shadow over the Indian election

AS the most populous democracy in the world prepares to hold national elections for the 10th time since independence in 1947, the question of whether they will be free and fair is being raised with considerable unease because of the atmosphere of violence.

India's Election Commission, an autonomous constitutional body that has the responsibility for conducting the mammoth poll - the country has an electorate of 510m - argues that democracy has been an overwhelming success.

"The Indian voter watches silently until the last day and then acts decisively. After all, he has frequently changed governments through the ballot box," says a senior Election Commission official.

Yet he concedes that the last two decades have witnessed, with alarming frequency, the rigging of elections in some constituencies and the practice is spreading.

The phenomenon of what is known as "booth capturing" began 20 years ago in Bihar and has spread to other states like Uttar Pradesh and Haryana in the north and, more recently, to Andhra Pradesh in the south. In the 1989 parliamentary elections, the commission officially recorded 1,589 cases of "booth capturing" and took remedial measures, including ordering a new poll.

But officials concede that there could be hundreds, even thousands, of cases that will go undetected. In all fairness, though, there have been no complaints of rigging from many states (including, curiously, the insurgency-affected state of Punjab where "booth capturing" is unknown).

"Booth capturing" actually means massive stuffing of ballot boxes and is officially categorised as being either "silent" (when false ballot papers are literally stuffed in the boxes)

The phenomenon of 'booth capturing' is on the increase, writes K.K. Sharma

with the connivance of the supervisory staff or "violent". The latter involves actual intimidation of voters and polling staff, often at gunpoint.

There are many other dirty tricks, particularly during campaigns. Candidates frequently hire thugs for the purpose of disrupting meetings of rivals, or to battle against thugs owing allegiance to others.

In some states like Bihar, there are highly skilled and highly paid gangs who are experts in "booth capturing" and illegal practices. In the southern state of Karnataka, such gangs distribute lorryloads of arrack liquor on polling day.

Despite an elaborate code of conduct framed by the commission, such "corrupt practices" are growing. Thus, organising an election is no easy task. The commission has no field staff on the central and state governments to provide 3.5m workers to man the 600,000 polling booths.

The commission does not think that the coming elections will be unduly violent, but the Home Ministry thinks otherwise because of the heightened communal tension. It has drawn up a list of about 80 "hyper-sensitive" constituencies which are prone to communal violence, part of nearly 300 constituencies categorised as "sensitive".

Polling is to be held on three days spread over a week (May 20, 23 and 26) because security personnel have to be redeployed for the elections. In

addition to nearly 1.5m state police and home guards, the central government will provide 640 companies of troops, numbering about 1,000 each.

These are far less than are needed, but large numbers of paramilitary forces are already committed to fighting insurgencies in Kashmir and Punjab and cannot be spared for election duties. Hence the fears of increased violence - the death toll of 179 in the last elections in 1989 could be exceeded.

There are many more problems, most of them perennial. In such a diverse country, the weather is always a factor. In some Himalayan constituencies, polling will be held only when snow melts later in the summer. Demarcating constituencies is a massive pre-election exercise made more difficult because 25 per cent are reserved for lower castes.

Much of the electorate is illiterate and cannot read the names of candidates on ballot papers. The commission provides all the nine national parties and 38 state parties with permanent symbols (for instance, the Congress symbol is an open hand).

This does not always simplify matters as many constituencies have scores of candidates. In 1989, Belgaum, in Karnataka, had a record 301 candidates and the ballot paper was more than a metre in length. The cost of the national election in 1989 was Rs1.1bn (\$30m) and is expected to be at least 25 per cent more this time. This does not include the money spent on campaigning or funding dirty tricks.

The official limit for election expenses is Rs150,000 for each candidate, but this is invariably exceeded many times over by parties and candidates.

The commission describes the elaborate exercise, including the violence and the corrupt practices, as "a part of the pangs of democracy".

## Thailand expects growth rate fall

THAILAND forecasts annual growth in gross domestic product over the next five years of 8.2 per cent, down from 10.5 per cent during the past five years, a government planning agency said, Reuters reports from Bangkok.

Exports, which have been the main driving force of growth, are set to expand by 14.7 per cent a year in 1990-96, compared to the current rate of 24.6 per cent, the National Economic and Social Development Board said at the weekend.

Board planners are concerned that inflation will rise to 5.5 per cent in 1992-96 from the current 4.7 per cent a year, and the current account deficit will grow to 5.2 per cent of the gross domestic product in the same period from 4.5 per cent.

## Maybe you should start by spending a few minutes.

It is not a fad, or a vision of the future.

Client-server computing is real.

It's the fastest growing form of business computing since the PC.\* And its rewards are tempting: Tremendous power for the pound. Longer hardware lifecycles. Lower training costs. Less maintenance. Faster time-to-market. Better workgroup productivity.

So what exactly is client-server computing?

Ideally, it combines a PC's ease-of-use with the computing power of far larger systems. It lets people locate information on computers throughout the company — without having to know where to look, or how to get there. And it inspires workgroups to collaborate in entirely new ways.

These ideals are not just Sun's. They're shared by every vendor of client-server computing.

What makes Sun different is how we accomplish them:

- 1) We put the focus of computing power wherever it can do you the most good — on the desktop, on the server, or split between the two.
- 2) We build everything into our desktop workstations that's needed for true client-server computing (RISC processing, multitasking, Ethernet, e-mail, audio, a graphical user interface, and plenty of memory and storage).
- 3) We give you a simple, consistent way to work

within applications, access files, print, send mail, and manage network resources.

- 4) We offload processing from host computers to servers and workstations — your system can grow without limits, and in less costly increments.
- 5) We integrate all of your company's computers, so

you can draw upon the data, applications, and processing power of every computing resource on the network.

That's what we do.

Now here's how we did it.

*The luxury of nothing.*

Nine years ago, when Sun began to explore client-server computing, we had a huge advantage over other computer companies.

We had no proprietary technology to protect.

Our engineers were free to design a total client-

server environment. An environment that would, over time, embrace promising new concepts in computing, such as RISC processing, object management, and digital imaging.

All those years we were free to pick and choose only those technologies that made the most sense in a client-server environment. And when we did choose, we chose only one:

One operating system. One hardware platform. One networking system. One graphical interface.

That way, Sun was able to devote itself to perfecting a single, integrated client-server approach.

Which leads us to another advantage Sun had in its favour:

By starting out with a completely open mind, we ended up with completely open technology.

*Open to anything.*

From the beginning, we were determined that a Sun system should include the hardware, networks, and databases you already use.

Today, every Sun workstation and server is powered by the SPARC™ microprocessor, running the UNIX™ operating system, accessible by the OPEN LOOK™ graphical user interface, and linked together in the ONC™ networking environment.

Each of these technologies was designed on open

\*Independent analysis. AEC. Brown & Sun estimate that commercial and technical business workloads will reach \$122 billion or more this decade in the desktop computer and server that comprise client-server technology.

## INTERNATIONAL NEWS

## Iraq likely to resume oil exports

IRAQ'S State Oil Marketing Organisation has started notifying its traditional customers it will soon be ready to resume exporting oil and oil products, the Middle East Economic Survey reported yesterday, Reuters reports from Moscow.

But the authoritative oil industry newsletter noted that the United Nations Security Council had not yet approved an Iraqi request to export \$942.5m (£597.6m) worth of oil so that it can buy food and other emergency supplies.

Oil exports are Iraq's only

viable source of hard currency income following the severe damage suffered by its economy in the war. The Security Council's sanctions committee is scheduled to meet today to decide on the Iraqi request. Only humanitarian supplies are exempt from the trade embargo.

But much also depends on Turkey and Saudi Arabia, countries through which the bulk of Iraqi oil exports must pass. Turkey has said it would help Iraq export oil through pipelines on its territory after

approval by the UN. Saudi Arabia's position remains unclear.

Iraq's northern oil fields still have a production capacity of 800,000 barrels per day (bpd) with output around 200,000 bpd, which is processed at the local Daura and Baiji refineries, the Cyprus-based newsletter said. Iraq's southern fields remain out of action due to war damage, it added.

● The newsletter also reported that Iran has concluded two oil deals with US

buyers as part of a strategy to revive direct sales to the American market. Neither contract delivers Iranian oil to the US so they avoid Washington restrictions requiring special payments.

The National Iranian Oil Company (NIOC) has made a 110,000 bpd term contract with Coastal Corp for delivery to the US firm's Aruba refinery in the Caribbean, and a term contract of nearly 20,000 bpd has been concluded with Mobil Corp to deliver to the Far East, it said.

## Angola struggles for a fresh start

Julian Ozanne looks at how old problems could spoil the new peace

SCRAWLED on the rusty corrugated iron walls on one of Luanda's many squalid shanty homes is a slogan which for most people sums up the political dilemma facing Angolans: "MPLA Robs, Unita Kills."

Yesterday's announcement by Mr Jonas Savimbi, leader of the rightist rebel Unita movement that a peace deal has been worked out with the leftist MPLA government will be greeted with joy by the long-suffering civilians of Angola. But it will not reduce the discontent with the two main political forces which have shaped the country's bitter history since independence from Portugal in 1975: the Soviet and Cuban backed MPLA which has ruled the country with an ideological iron fist and the US backed Unita rebels, who have waged a ruthless 16 year civil war against the government.

The peace deal, which will be initiated in Lisbon today, offers the first real prospects for realising Angola's tremendous economic potential in oil, diamonds and agriculture and for rehabilitating the devastated infrastructure. But the transition to peace and democracy in what could be one of Africa's richest countries is fraught with risk.

Sixteen years of corrupt and oppressive one party rule, inefficient central planning and a war which has been waged indiscriminately against civilians has cast a shadow over the credibility of both the MPLA and Unita.

"Most people in Angola want a fresh start with a third political force which is neither the MPLA nor Unita," said Mr Joaquim Pinto de Andrade, president of the recently formed Angolan Civic Association. "We want people whose hands are not stained with blood, death and destruction and whose pockets are not full with state money."

The fact that such statements are now possible marks the rapid pace of political reform since last year, when it was almost inconceivable that the MPLA would relinquish its monopoly of political power.

Last week the MPLA Congress met to abandon Marxist-Leninism and prepare itself for the country's first multi-party elections. But reforming Angola's distorted economy and implementing austerity measures while campaigning for elections in 1992 will be a trying task for the MPLA.

After hesitating, he said that the MPLA in an election would be that "in spite of foreign invasion by South Africa and the war against Unita the Angolan nation did not disappear. It has survived because of the MPLA."

Such an appeal is unlikely to win many votes when the huge debt side of MPLA rule is considered. Much more likely the MPLA's chances of winning any seats in a democratically elected parliament and in managing a peaceful transition will depend on whether they can deliver a higher standard of living.

So far, however, long-over-

due economic reforms proposed by a new team of technocratic ministers, including price, trade and exchange rate liberalisation, has been obstructed by MPLA stalwarts.

Unita's chances of political success are generally rated higher than the MPLA's but, but while there have been atrocities committed by both sides many Angolans blame the rebels for the worst excesses of war.

Unita could also threaten national reconciliation by raising the spectre of tribalism which has plagued Angola since Portuguese colonial rule. Ethnicity remains a source of division and Unita has been successful in building a movement out of the Ovimbundu people, the largest single group in Angola.

Mr Andrade, the leading opposition figure to emerge so far, says that unless the government brings together the diverse political forces and associations into a civic forum with real deliberative powers, like in Czechoslovakia last year, the transition will degenerate into political conflict.

"Without a national consensus and a shared sense of responsibility for the transition a collapse into anarchy and conflict is inevitable," he said.

Whether the government or Unita would accept power sharing in the run up to elections remains questionable. But clearly the measures taken so far are merely the first steps in a difficult process of change which could easily degenerate into killing and robbing.

## Japanese moved by plight of Kurds

By Stefan Wagstyl in Tokyo

INTERNATIONAL charities have often found Japan hard going. Japanese will make great sacrifices for the sake of family and close friends but are less easily moved by the plight of strangers.

There have always been exceptions, but Japan lacks a single international charity of the scale of Oxfam in the UK, Medecins sans Frontieres in France or Care in the US.

While the Japanese government is the world's largest provider of assistance to developing countries, contributions by private organisations are small in comparison with the west.

Japan is a relative newcomer to the club of rich nations; its self-consciously insular people have little experience of involvement in international affairs; their religious traditions lack the missionary spirit of Christianity. When the Japanese government last year asked for volunteers for medical missions to the Gulf, only about 20 people responded.

But there are signs that things are changing. The graphic television coverage of the destruction of Kuwait, the bombing of Iraq, and the sufferings of the Kurdish refugees has made Japanese more aware of the world around them. The appointment of Mrs Sadako Ogata, a tough-minded university professor, as United Nations High Commissioner for Refugees, has made people realise that they have a role to play beyond their shores.

Government has led the way, with \$128m being given from

the public purse for refugees and other victims of the war. Of this, \$100m is going for the Kurds, fully one quarter of the \$400m worldwide appeal launched by the United Nations Disaster Relief Organisation. Japanese business has followed with a ¥1.4m appeal fund, to which Sony, the electronics group has contributed around ¥400m.

People also seemed to have been moved by the refugee crisis as never before. Miss Chikako Saito, an official of the UNHCR in Tokyo, says it has collected ¥400m in the past few weeks, less than the ¥500m donated for famine relief in the 1980s but money is still pouring in. "The difference this time is that people want to know about the refugees. At the time of Ethiopia they just felt a vague sympathy. Now they want to know where the victims are and how they are suffering," said Miss Saito.

The Japan Red Cross says it collected 7,000 gifts worth ¥800m in the first week after the war broke out in January.

However, an official of the Non-Government Organisation for International Co-operation, an umbrella group for 13 volunteer groups, says it is too early to say whether Japanese attitudes have changed or not. "Buddhists are passive, accepting things as they are and not trying to change them. So Japanese tend to feel sympathy but not to act. We need to establish organisations to make sure people can express their sympathies."

A Kuwaiti soldier stops an Iraqi at the Abidjan refugee camp on the border with Iraq from boarding a bus on the journey to Iran. Iran will take 2,000 such refugees and many were left behind.

## Egypt condemns Israel

By Max Rodenbeck in Cairo

IN ITS MOST harshly-worded attack since the end of the Gulf war, Egypt yesterday accused Israel of blocking Middle East peace efforts.

The policy of building settlements in occupied territories was "aimed at trying to abort ... efforts to promote a peace settlement," said an Egyptian Foreign Ministry spokesman.

Separately, Mr Boutros Ghali, minister of state for foreign affairs, said Israel was creating obstacles over the composition of the Palestinian delegation to a peace conference proposed by Mr James

Baker, US secretary of state.

The double-barrelled criticism reflected growing concern in Cairo that the government of Mr Yitzhak Shamir is not serious about achieving a compromise on the Palestinian issue, viewed by Egypt as the key to future regional stability. The Foreign Ministry statement said that Egypt regarded Israel's recent settlement activity "with much repulsion".

Hinting that a halt to settlement would draw a favourable Arab response, Mr Ghali said that confidence-building measures "must be reciprocal".

## Pretoria cuts oil stocks

By Patti Waldmeir in Johannesburg

SOUTH Africa is to raise R2bn (\$455.6m) by reducing strategic stockpiles of oil built up as a result of the international oil embargo, and will spend the money on development programmes including projects aimed at ending township violence, President FW de Klerk said yesterday.

However, officials said some R2bn of the total did not represent new funding, as it had already been allocated in the 1987-88 budget announced last month. The balance of up to R2bn might not be available for some years.

Mr de Klerk said the government must first finance energy projects to which it was already committed, apparently including the R2bn Mossesburg oil-from-gas project, and noted that normalisation of relations with the international community was a prerequisite for the release of further funds.

The R2bn available during the current budget year would be used to fund projects that would further social stability, he said, noting that township violence had hurt business confidence and put off investors.

industry standards; or, where no existing standards were to be found, we made our available to the rest of the computing world.

Consequently, Sun client-server systems can give users uncomplicated access to all of your existing computers — even those running proprietary operating systems such as Ultrix, AIX, OS/2, VMS, and Macintosh.

Still, we weren't satisfied just to make our systems compatible with your equipment.

We also wanted them to be compatible with your people.

*What you don't see is what you get.*

Long ago, we asked ourselves:

Could people exploit the full power of UNIX, without seeing strange messages like `ldcvfd,ba onl nmt: Invalid argument?`

Could a systems administrator manage an integrated, multivendor network, without seeing its underlying complexities?

Could a software developer design around a graphical user interface, without seeing a line of its code?

The answers are yes, yes, and yes.

We've made client-server computing simple for users by giving them a graphical interface that's as intuitive as Macintosh or Windows 3.0.

We've made system administration simpler with SunNet™ Manager. It's a powerful set of tools that actually uses the network to manage itself.

We've made life simpler for software developers, too.

With more than 400 Sun and third-party CASE tools.

*Is it really worth it?*

The Wall Street Journal, Mitsubishi Bank, New Zealand Inland Revenue, Northwest Airlines, Xerox, Shell Oil, NYNEX, and hundreds of other respected businesses around the world are using Sun client-server systems today.

This is what they report:

"We get more computing for the money." Companies find that a network of Sun servers and workstations accomplish more work in less time than the costlier host systems they had previously used.

"We're cutting costs and raising profits." For example, a Canadian insurance company's Sun system reduced overhead expenses by 55%, and boosted profits by 30%.

"We not only protected our investment, we improved it." Existing host systems and PCs can be put to more efficient use as network servers and clients. Offload some of a mainframe's tasks to other servers, and you

could even prolong its life expectancy.

"We're no vendor's prisoner." The open technologies of SPARC, UNIX, OPEN LOOK, and ONC give companies the freedom to choose amongst vendors for the price and performance that suits their needs.

*The next investment is ours.*

As much as we appreciate the time you've just invested with us, the fact is there's much more to know about client-server computing.

So now we'd like to make a small investment in you.

Simply return this coupon, or call Sun U.K. Marketing on 0276-416482. We'll send you a complete package of useful information.

After reading this ad, you already know more about client-server computing than most of your competitors.

Call us, and we'll tell you the rest.

## Tell me more.

- ☐ Send me your client-server overview.

## WORLD TRADE NEWS

# France urges EC to keep Japanese car import curbs

By Andrew Hill in Brussels and David Buchan in Luxembourg

FRANCE'S industry minister yesterday called on the European Commission to back EC car-makers' proposals for continuing controls on Japanese car sales in Europe.

Today, all 17 Commissioners will discuss the vexed question of Japanese car imports for the first time since October, with the aim of informing EC governments of their proposals by the middle of next month and restarting negotiations with the Japanese.

"I hope the Commission will agree on a proposal not much different from what the European car producers have put forward," said Mr Roger Fauroux, the French minister.

The European industry seems to have moved closer to the Commission's line on Japanese car imports recently, principally because Mr Jacques Calvet, the hardline chairman of Peugeot, has distanced the group from fellow-producers.

Last month, ACEA, the new industry lobby group, which excludes the French car manufacturer, called for continuing controls until the end 1999, saying the Japanese share of the market should not exceed 15 per cent until then.

The Commission would now

like to end months of squabbling between EC member states and manufacturers on the timetable, terms and conditions for opening up the European market to Japanese car imports, but the potential for disagreement is still great.

Today's meeting will consider again outline principles for opening the EC market which were first put forward at the beginning of last year. They include the ending of national restrictions on Japanese imports by the beginning of 1993, Japanese monitoring of its own car exports to the EC for a transitional period to end in 1993, according to first Commission plans, and improved access to the Japanese market.

Commission officials stressed that only imports would be monitored and not "transplants" - Japanese cars assembled in Europe - which they estimate could grow from 250,000 a year at present to perhaps 1.2m by the end of 1993.

The absolute level of imports is expected to rise to a similar level before the EC market is completely open, but commissioners will also consider how far the level of imports should be adjusted if market conditions change.

# Mixed credits dispute muddles UK trade outlook

Industry says some export contracts are endangered by official indifference, writes Peter Montagnon

BRITISH capital goods exporters, already alarmed by what they see as government's efforts to undermine the Export Credits Guarantee Department (ECGD), are facing a new worry which has widened the gulf between them and a once supportive government.

The £27m allocated to mixed credits - export credits sweetened by aid - in 1991/2 has been fully committed less than a month into the government's financial year. As a result the Overseas Development Administration has closed the window for new deals till April 1992.

Top executives of companies such as GEC, NEL, Balfour Beatty and Trafalgar House have fulminated privately about the cover restrictions and premium increases imposed by the ECGD. Now they point to the news on mixed credits as confirmation of their worst fears about the government's indifference to their fate.

Without the mixed credit facility - commonly known by the initials ATP, which stand for "aid and trade provision" - they say they will be unable to sign up new orders in important markets such as China, Indonesia, Malaysia, India and Thailand where such financing is regarded as normal.

To save deals now in the

pipeline for these markets, they must try and delay signing the contract, which makes pricing difficult at a time of high inflation at home. Or they must arrange expensive bridging finance for their customers, or transfer the procurement abroad to a country which is not so stingy about its aid budget.

Government officials are at pains to point out that the closure of the ATP window for the remainder of the financial year does not constitute a change of policy. It has happened simply because the UK's recent remarkable run of success in winning orders with ATP money.

Foremost among these is the £400m order recently won by Cementation International and Balfour Beatty to build a hydro-electric power station in the Malaysian state of Kelantan.

But there have been other deals - for rural communications, railway signalling and track rehabilitation in Indonesia, for the Ankara metro and truck supplies to Zimbabwe - which have awoken the total.

There is, however, little doubt that the lack of much official sympathy for the exporters' plight reflects the fact that large parts of the government have always viewed ATP with scepticism.

Though it was originally

Lynda Chalker: no more money this year for the ATP

conceived as a political device to justify an increase in the overall aid budget, the Overseas Development Administration has worried about the real developmental value of money spent in this way.

The Treasury is concerned that ATP constitutes another unjustified subsidy to exporters on top of those they already receive through payment of claims by ECGD and routine interest subsidies on export credits.

ATP credits account for some 15 per cent of the ECGD book, officials argue, and the facility adds to the concentration of its business in a limited number of markets.

Exporters say that one reason why there has been a bunching of ATP deals in the current year is that some contracts were delayed last year, particularly in Indonesia, because of uncertainty over the availability of ECGD cover. Now ECGD cover is available, but suddenly there is no aid money.

A look at the figures suggests this smacks a little too much of conspiracy.

The ATP budget was under-spent last year, but only by £4.5m out of a total of £28m. This suggests that it would have been difficult to fund some of this year's projects had they gone ahead earlier.

Part of the problem relates to the funding of concessional loans. The government built up a large volume of lending commitments in the first three years of its concessional loan programme which ended in March. The result is that part of the ATP budget is automatically taken up with subsidies on loans agreed some years ago.

From this financial year, the system of accounting for such loans is being changed. The government will pay lending banks a sum equivalent to its total grant commitment during the drawdown period of the loan rather than making a series of "pay-as-you-go" subsidies each year until the loan matures. The banks must then devise a technique to spread the subsidy through the life of the loan.

Though the details are still under negotiation between the banks and the City, this will mean that fewer concessional loans can be agreed in future, though it will also obviate the problem of a ballooning ATP budget as more commitments are added to the books.

The simple answer would be to increase the ATP budget. But Mrs Lynda Chalker, the aid minister, told parliament yesterday that additional resources were not available for the ATP in the current year.

Britain has supported efforts in the Organisation for Economic Co-operation and Development to reach a new international agreement limiting the use of mixed credits. With these talks about to climax it would look odd for the government to raise its ATP budget.

In fact, government officials say, they regard the OECD discussions as the best way of dealing with the problem.

Envisaged in the OECD is a tough agreement that will severely limit mixed credits for otherwise commercially viable projects as well as those to richer countries and for large projects.

This is little comfort for exporters who say they do not believe the agreement will be enforceable.

Japan will continue to offer large amounts of "untied" mixed credits which will end up supporting its own exports, they say. Only Britain will end up playing by the new rules.

In the old days, said one executive, the Department of Trade and Industry would have lobbied hard for an increase in the ATP budget.

But Mr Peter Lilley, the secretary of state, is said to be economically dry and unsympathetic. "We haven't had a positive secretary of state in a very long time," ECGD had dropped, Page 11

# Tokyo urged to open paper trade to competition

By John Thornhill

MR John Georges, chairman and chief executive officer of International Paper, the world's biggest paper company, yesterday urged Japan to open its paper trade to foreign competition, to help develop international trade and avert the mounting frustration of the US Congress.

"The paper and wood products industry is one of those areas where Japanese industry has to open up. Consumers will benefit from the removal of barriers," he said.

Addressing a conference on the world pulp and paper industry organised by the

Financial Times and the European Paper Institute, Mr Georges said the world paper industry was suffering from a cyclical downturn and general slowdown in the global economy. But "when I look to 1993 and beyond, I am very bullish about the industry's future."

● The Polish Ministry of Ownership Transformation has appointed Hambros Bank to advise it on the restructuring and privatisation of the country's pulp and paper industry. Hambros will help draw up a sector-wide strategy for developing Poland's 40 paper companies.

# Trade-distorting rules 'still holding Indonesia back'

SUCCESSIVE trade policy reforms since the mid-1980s have made Indonesia more competitive on world markets, but a range of trade-distorting measures remain in force, with the most difficult areas still to be tackled, Peter Montagnon, World Trade Editor, writes.

This is the broad conclusion of Gatt's first review of Indonesian trade policy, as part of its series of country reports. It shows the extent of the challenge facing a typical developing country opting for trade reform, but urges it to persist, as trade is the key to its economic growth.

Indonesia began a series of trade reforms after the debt shock and the oil price fall of the mid-1980s. Successive trade reforms since then have reduced impediments to struc-

tural change. But Gatt suggests the changes have been too gradual and selective, concentrating on manufacturing activities with the least resistance to reform.

Competitive pressures led to reversal of reform in some areas. Some industries such as steel, clothing and transportation remain sheltered from international competition. "A more uniform assistance structure would reduce distortions, induce more efficient allocation of resources and help combat inflation by making the economy more flexible and encouraging greater price competition."

Many policy instruments criticised by Gatt are common to the developing world. They include import licensing, import surcharges, local con-

tent requirements, counter-trade obligations and increasing curbs on exports of unprocessed primary materials, it says.

Indonesia's trade suffers from substantial "tariff escalation", where tariffs on consumer goods are on average over double those applied to capital and intermediate goods. Import surcharges of up to 40 per cent accentuate this problem, so that consumer goods account for less than 5 per cent of total imports.

Gatt notes "bound" or fixed tariff rates apply to under 10 per cent of import items. Sometimes the bound tariff level is exceeded by imposition of an import surcharge. But Indonesia pledges a large rise in tariff bindings, especially on textiles in the context of the

Uruguay Round. Import surcharges to protect domestic industries from fluctuating world prices are common, but are "largely informal, lack public scrutiny, and have no legal procedures available to grievous parties," it says.

Indonesia is considering limiting all import surcharges to one year and has announced plans to scrap about 75 per cent of them this September. Meanwhile Gatt says the close relations between the government and licensed importers creates uncertainty for suppliers and "promotes a system that may be vulnerable to manipulation."

State-trading enterprises dominate several designated strategic manufacturing industries, such as shipbuilding, steel, aerospace, cement, fertil-

isers and aluminium. Certain of these sectors are subject to local content requirements, with rules on government procurement requiring foreign suppliers to offer counter-purchase arrangements.

Gatt questions the curbs on Indonesia's exports of natural-resource based products such as logs, raw hides and cement. These depress domestic prices by an estimated 30 per cent in the case of logs brought by local plywood producers, and have a similar effect to a subsidy, it adds.

"Whether Indonesia benefits in the long term from such policies depends on its ability to develop export-competitive processing industries not dependent on continued support through depressed input prices."

# Polish telecoms cable link-up

CO-OPERATION between Poland's state railways and its post and telegraph service (PTT) will speed installation of an optical-fibre telecommunication cable linking the north and south of the country.

This is stated by Mr Ole Steen Andersen, group director of NKT, the Danish electro-technical group providing the cable under a DKK110m (£18.4m) deal, Hilary Barnes reports from Copenhagen.

Twelve cables, one for PTT and one for the railways, will be laid alongside the Polish rail network. Talks are taking place with the Czechoslovak and Hungarian authorities to extend the cable southwards, starting a radical modernisation of eastern Europe's telecommunication network.

# ENCORE!

1989 was Skipton Building Society's best year ever and a hard act to follow. However, 1990 saw the Society grow twice as fast as the industry average and break our record yet again.

In 1990 we grew by over 30% for the second year in succession against an industry backdrop that averaged out around 15%.

Profits also increased by 32%. A decidedly healthy figure in a somewhat ailing market, with our subsidiary companies also performing ahead of expectations.

More importantly, the Society's Management Expense Ratio dropped by no less than 6.3% producing a figure of 80.9p per £100 of assets.

On the investment front we experienced a 73% increase in net receipts over the year.

Conclusive proof that the savings schemes we introduced have been very attractive to investors.

Our mortgage balances also increased by 31% to more than £1.8 billion during the year.

In such a difficult marketplace this clearly demonstrates our ability to offer better value to those who are looking to buy their own home.

1990 RESULTS	£000s
PRE-TAX PROFITS	32,075
ASSETS	2,223,463
MORTGAGES	1,802,313
GROSS CAPITAL	103,697
MANAGEMENT EXPENSES (PER £100 MEAN ASSETS)	80.9p

# THE FACTS. AT £38.73, IT FIGURES.

At last there's a unique system to manage your life that combines a personal agenda with the specific needs of business people everywhere, by combining a diary with meticulously researched information that makes day-to-day planning simpler and more efficient.

It's called the FT Personal Organiser and its price represents outstanding value. Just £38.73, in fact.

# THE FT PERSONAL ORGANISER - ALL THE FACTS TO HAND

In a superbly crafted black or burgundy leather binder, the FT Personal Organiser - unlike many systems - comes complete and ready to use. There are five sections divided by FT-pink tabs.

● A fortnight to view Diary Section comes with a handy Foldout Planner to help you keep track of your comings and goings.

An Information Section provides you with: ● A UK Route Planner ● Colour maps of the City and London's West End ● Underground/Inter-City Routes ● Hotels/Restaurants nationwide ● Theatres, concert halls, cinemas, exhibition centres, car hire, airports and British Rail ● Details of major World Business Centres ● A guide to FT Statistics ● World Time, UK and International Dialling Codes ● Conversion Factors.

There is also a fully tabbed A-Z Address/Telephone Section to record details of clients, colleagues, friends and restaurants.

A Notes Section provides ample room for jotting down ideas, addresses and phone numbers.

An Expenses Section keeps tab of your income and expenditure: ● Business expenses ● Motor running expenses ● Credit card records.

Complete refill packs and a range of additional sections are also available. Ring 071-799 2274 for details.

# FT COLLECTION - A QUALITY PROPOSITION

What we've shown here is but a small sample of the FT Collection, so why not send for the FT Collection colour brochure and see for yourself? It is packed with many invaluable business essentials from diaries to document cases. Contact us now on 071-799 2002, or write to FT Collection, FT Business Information Ltd., 50-64 Broadway, London SW1H 0DB, or send your business card.

# FIRST IMPRESSIONS THAT LAST

All items will be doubly welcome if they are personalised with initials and/or surname in high quality gold blocking. This kind of personal touch enhances the pleasure and worth to the user.

# THE WORLD'S MOST APPRECIATED BUSINESS GIFTS

Our business gift services include: ● Gold blocking of your logo ● Up to eight publicity pages in the diaries and personal organisers ● Direct despatch to the recipients together with your compliments slips or greetings cards ● Samples.

We will even reserve your choice of FT Collection gifts if you are unable to finalise your gift list early in the year.

# LARGE ORDER DISCOUNTS

Order 25 items or more from the FT Collection and you will qualify for discounts of up to 25%.

# DISTINCTIVE GIFTS THAT MAKE GREAT COMMERCIAL SENSE

Contact us now on 071-799 2002 for more details on our business gift services, or write to FT Collection, FT Business Information Ltd., 50-64 Broadway, London SW1H 0DB.

# ORDER FORM

Please send me the FT Collection Brochure and Order Form.  
☐ I am interested in using the FT Collection as business gifts, please send me details.  
☐ I wish to place a firm order as detailed below.

# Fair Prices at Heathrow. And That's Guaranteed.

## Duty Free Shopping\*

You can make substantial savings at Heathrow's Duty Free shops. All cigarettes and over two dozen leading brands of spirits, including Smirnoff Blue Label, Bells Scotch Whisky, The Famous Grouse, Johnnie Walker Red Label and Gordon's Dry Gin are at least 40% cheaper than the average High Street price, detailed in Nielsen's quarterly survey of off-licences, supermarkets and wine specialists†. These products are clearly identifiable in the specially marked sections. Furthermore, the same survey shows you'll save at least 20% on wines and other spirits.

## Restaurants & Bars

Heathrow offers an excellent choice of places to eat, from elegant waiter service restaurants to quality fast food outlets. If the outlet is part of a national chain, you will find prices are in exact accord with their national pricing policy. In self-service restaurants and bars a number of key items, such as coffee, tea, orange juice, a draught bitter and a selection of sandwiches, are priced in line with those established by Nielsen's quarterly survey of outlets offering similar food and service†.

## Bureaux de Change

What could be more convenient than facilities in every terminal that guarantee the availability of at least 26 currencies on demand? Especially as exchange rates for currency notes are kept within 1% of those quoted by a major High Street clearing bank (the name of which will be on display). Minimum commission charges offer even better value than those banks.

The bureaux will also cash personal Sterling cheques (upon presentation, and to the limit, of your cheque guarantee card), Sterling traveller's cheques and Eurocheques in Sterling, as well as accepting Giro credits to pay your bills — all absolutely free.

When you come to Heathrow Airport you'll find over 60 shops, where well known names such as WH Smith, Our Price and Body Shop offer the value you'd expect from these High Street stores.

Similarly, in over 40 restaurants and bars, you'll find favourites such as Burger King and Carluccio's. You'll not just find fair prices, but also excellent service and quality. All this in a unique

environment means we can guarantee you'll find these

prices at Heathrow. And if you're not satisfied, we'll refund your money, upon return of purchase where applicable.

## Tax Free Shopping\*

It's hard to beat the savings at Heathrow's Tax Free shops, with every item priced exclusive of VAT, and perfumes offer particularly good value, with all prices at least 21% cheaper than their RRP, as detailed in Chemist and Druggist.

## Car Rental

You'll find all the major names at Heathrow — Avis, Budget, Europcar and Hertz, soon to be joined by Alamo, British Car Rental, Eurodollar and Kenning, providing a choice of at least 6 national companies in every terminal. Each guarantees that prices will not exceed their own national tariff, and often you'll find them even lower.

## Airport Shopping

There's something for everyone at Heathrow, and throughout our many famous stores, such as Tie Rack, Olympus Sport and Bally, you'll find prices in exact accord with their national pricing policy. There are also a number of specialist airport retailers, such as the Drugstore, Caviar House and Teddys where prices are in line with the RRP where available, or with the average High Street price, according to Nielsen's quarterly survey of retail outlets†. Where no authoritative price comparison is available, we believe we still offer you great value, and if you have reason to be dissatisfied, we will refund your money, upon return of purchase where applicable.

## Hotel Reservations

A Hotel Reservations Plus service desk is conveniently situated in the Arrivals concourse of each terminal. We will check room availability in any UK hotel and offer you a wide choice of accommodation, including a selection of hotels recommended and approved by our quality assurance representatives. For these services, and reassurance, there is a nominal booking fee.

And so throughout the airport you will now find the Heathrow Value Guarantee on display. You'll see it in all our shops, restaurants and bars, and at every car rental and hotel reservations desk. Because now at the world's premier international airport, we want you to be confident we offer you excellent value — and that's guaranteed.

## World War Two Spitfire unsold as auction bids reach £720,000

Auctioneers Christie's yesterday offered the finely restored Mark IX Spitfire pictured above as part of an auction of historic aircraft, engines and aviation memorabilia at the Science Museum, near Swindon, southern England. Built in 1943 and one of only a score of so survivors likely to appear on the market, it saw active service in Italy, where it shot down two enemy aircraft on one day in May 1944.

It had less luck yesterday and was unsold when the bidding reached £720,000.

## BRITAIN IN BRIEF

## Airports to offer refunds on purchases

Passengers travelling through Heathrow and Gatwick airports near London are to be guaranteed refunds if they are dissatisfied with purchases at the airport, according to a new plan.

Airport authorities are working with retailers to underwrite the scheme, which will soon apply at all the British Airports Authority's airports. It is intended that the new scheme will improve the image of airport shopping.

"Although there are costs involved for us, we hope to make this up by increasing sales to more satisfied customers," said BAA chief executive Sir John Egan.

Refunds will apply to shops, catering outlets, exchange bureaux and car rental offices. Customers will be allowed to return goods even if they have taken them home and are dissatisfied on grounds of price or quality.

## Labour plans training revamp

Plans to overhaul post-16 education and training, including abolition of the A-level, have been announced by the opposition Labour party.

Mr Jack Straw, Labour's education spokesman, said in

Jack Straw: urged end to qualifications "jungle" launching the proposal: "It is now a national imperative that we end the present jungle of more than 200 qualifications and replace it with a single coherent framework of 16-19 qualifications combining the academic and the vocational."

Labour plans to create a single post-16-year-old qualification for academic and vocational studies, to be called the Advanced Certificate for Education and Training. It will eventually replace the A-level, the Business and Technician Education Council courses, and the host of other existing vocational qualifications.

## Britain's crisps in Euro-crunch

British snack-makers face a battle to keep exotic crisps on sale in shops and public houses as European Community officials vowed to press ahead with plans to ban artificial sweeteners used in flavourings.

Sweeteners used in flavourings such as prawn cocktail, tandoori chicken, tomato sauce and other crisp varieties were a risk to children's health, Brussels said.

The EC proposals would ban snack-makers from using common sweeteners such as aspartame and saccharin in crisp flavourings after 1992. Snack-makers want their products exempted from the ban.

## Kuwait contract likely for UK

A British consortium is in line to win a major contract in helping to tackle the blazing oilfields of Kuwait, Energy Secretary John Wakeham has said.

The Kuwait-British Fire Group was asked to carry out a damage survey in one of the oilfields, which could lead to a bigger deal later.

The group is made up of three large firms - Amec, Taylor Woodrow and Whimpey - as well as a number of specialised sub-contractors.

John Wakeham: optimistic on Kuwait contracts

Mr Wakeham was speaking after returning from a three-day visit to Kuwait with a dozen leading oil experts and businessmen aimed at winning contracts for British firms.

## Rifkind urges BR sell-off

Transport Secretary Malcolm Rifkind said he wanted to see "a substantial part" of British Rail privatised during the lifetime of the next Parliament.

But he pledged that any break-up of British Rail's monopoly - a key demand among Tory right-wingers - would involve safeguards to rail users on unprofitable routes.

Mr Rifkind said the Government was considering opening up the use of the existing rail networks to new operators to encourage maximum use.

## Rover cars for Siberian police

Police in Siberia will soon be on the trail of criminals in British-made Montego cars.

The Rover Group has broken into the market in the Soviet Union with an initial order worth £1m for 144 Montegos. The 1.6 litre cars will be supplied to the Siberian city of Tobolsk and 20 will be used by the regional police force.

One Montego will become the official chauffeur-driven car of the city's Bishop Dmitry, and the others will go on sale to companies and Russians with enough rubles.

## Nigel Judah

Nigel Judah, who died on April 28, aged 66, was responsible for Reuters' finances during the news agency's spectacular growth over the past three decades.

Nigel Judah: presided over Reuters' financial success

Mr Judah joined Reuters as an accountant in 1955. When he became secretary and chief accountant in 1960, Reuters' revenues were £2.4m, and it was making a loss of £10,000. When he handed over his financial responsibilities in 1980, revenues were nearly £1.4bn and company profits £230m.

## Further blow to export credit privatisation

By Peter Montagnon, World Trade Editor

SUN ALLIANCE, the UK's biggest household insurer, has pulled out of the bidding for the short-term credit insurance business of the Export Credits Guarantee Department (ECGD).

The move leaves only three of the original six potential bidders still in contention. Analysts say that Assicurazioni Generali of Italy and NCM of Holland now appear to be the strongest candidates.

Sun Alliance, long conspicuous for its lack of aggression as a bidder, said prospects for

premium income, estimated at £22m, did not justify the considerable resources required to integrate ECGD into its other operations.

It was also concerned that the reinsurance arrangements being negotiated by the government with the private sector might lack "robustness" in the longer term.

As a result it had decided that the acquisition of the business would not fit in with its domestic activities or its expansion plans for Europe.

Its decision will come as a

further blow to the government which has been struggling to push the sale through against vehement opposition from the export industry. Eagle Star, the insurance subsidiary of BAT Industries, and Belgium's Cobac have already pulled out.

Bids must be submitted by noon today. Trade Indemnity, the UK company which dominates the domestic market for credit insurance, NCM of the Netherlands and Assicurazioni Generali of Italy are expected to bid.

Insurance market specialists say the chances of the Italian company winning the race have improved recently. It lacks the direct experience of credit insurance of the other two contenders, but has a strong balance sheet and the overall size of its operations give it considerable clout in the vital reinsurance market.

Trade Indemnity's image was tarnished by its announcement of a £25m loss last year as the UK recession brought a string of claims on bankrupt companies. Brokers say it

would need to persuade its reluctant shareholders - mostly other insurance and reinsurance companies - to subscribe to a rights issue to create the resources for a bid. The company declined to comment yesterday.

NCM, which also acts as the Dutch government's official export credit insurer, is recently announced net profits for 1990 up 19 per cent to Fl.5.8m. It said last week it believed it had a substantial chance of winning the battle.

## UK companies urged to help communities

By Alan Pike

COMPANIES are being urged to support a Community Investment Charter pledging commitment to partnership between business, government, local authorities and voluntary organisations in urban and rural regeneration.

The charter, launched in London yesterday with the support of Mr Kenneth Baker, the home secretary, is being run by the Community Development Foundation, a charity involved in supporting regeneration. Founder signatories include Barclays Bank, British Gas, BP, British Telecom, IBM, Laine, Peat Marwick Mainwaring, J Sainsbury and Whitbread. The initiative is supported by the CBI, Institute of Directors and Business in the Community.

Divided, disrupted and unhappy communities were not good for business, said Mr Baker. There was a need for a "series of partnerships right across our society" involving business, public and voluntary bodies.

Companies signing the charter will undertake to invest in local people's efforts to improve their own communities as part of their corporate giving programmes. The charter declares its support for "the development of public policies that enhance the quality of life of Britain's urban and rural communities."

# Use it to increase your productivity

The Resource of British Gas can directly affect manufacturers' ability to improve productivity, by increasing efficiency and product quality while at the same time reducing running costs.

It represents two inseparable qualities, the proven benefits of the fuel itself combined with the unrivalled experience of British Gas as a company. A unique combination offering an unequalled nationwide service, staffed by specialists in every aspect of natural gas and its applications in industry. The technical and practical support of our Research and Technology Division helps companies improve the performance of their plant and lower unit costs.

At your request, we will assess your needs and recommend or design a specific solution to meet your requirements. We can then arrange for installation, commissioning and maintenance of the system.

We can also help arrange finance, and even train your staff in the most efficient use of gas.

Whether you buy gas from us or not, the Resource of British Gas is a vast bank of knowledge for you to draw on. Put it to work for you and start increasing your productivity.

To: Mr J.G. Williams, Room 537, British Gas plc, 326 High Holborn, London WC1V 7PL. Send me a copy of your Resource brochure. ☐ Arrange for me to be contacted by a member of the Resource team. ☐

## UK NEWS

## Jobs cut at top retailing group

By John Thornhill

MARKS and Spencer, the international retailing group which for decades has been seen as a model of paternalism, is to shed 850 jobs in the next few days in the face of the most severe retailing conditions in a decade.

The decision follows a six-month review of the company's head office functions under the direction of Mr David Sieff, director for corporate affairs, and a separate reappraisal of its store management requirements.

Mr Sieff said the job cuts would "create a more efficient and effective head office that does not burden the business with excessive costs", would simplify decision making and would provide greater job satisfaction among the company's staff.

The cuts fall into two distinct areas. About 300 of the

company's 4,750 head office staff are to be made compulsory redundant and an additional 250 posts are to be phased out by means of natural staff turnover, early retirement and voluntary redundancy. But 300 of the company's 1,100 junior managers will also be made redundant as a

result of a low turnover of staff.

A spokesman for M and S explained: "When you set targets for recruitment you assume a certain percentage will leave at some time during their training period. What has happened over the past 18 months is that turnover has dropped dramatically. We have far more people at this level than we expected."

The company said it would be making generous redundancy payments, based on length of service and seniority, which would be well above statutory entitlements.

But the central London headquarters was gripped by gloom and confusion after M and S management decided they wanted to speak individually to all 300 employees who were being made redundant compulsorily.

## Swedes test propeller design for possible QE2 successor

By Andrew Baxter

The QE2 pictured leaving New York harbour: the latest in Cunard's world-famous line

A SWEDISH subsidiary of Vickers, the UK engineering group, is testing propeller designs for a possible Cunard ocean liner that may become the successor to the 23-year old QE2.

Cunard Lines, owned by Trafalgar House, said it was always looking at a variety of possible ways forward for Cunard, but otherwise had no comment on the report.

If the project were to go ahead, UK shipyards would face strong competition for the order from yards in continental Europe that have specialised in cruise ships.

It is understood that the liner would not be bigger than the QE2, thus allowing it to pass through the Panama Canal.

Trafalgar House described the report as longer on imagination than hard fact.

KaMeWa is the world's biggest manufacturer of controllable pitch propellers. The blades' pitch can be altered, changing the speed or direction of the ship, whereas conventional propellers are turned by a shaft of varying speed.

## Uproar over health service reforms

By Alan Pike and Emma Tucker

THE GOVERNMENT sought to calm the uproar over its health service reforms yesterday with Mr William Waldegrave, health secretary, accusing the opposition Labour party of stirring up a "bogus pre-election row ahead of Thursday's local government polls."

There were clashes in the Commons after the Labour Party had produced a leaked document which, it said, showed that managers at Guy's Hospital, London, knew they faced serious financial problems two months before the hospital became a self-governing trust.

The document indicated that managers of the Guy's and Lewisham trust realised that it faced "very serious financial problems in relation to maintaining the volume and present

range of services provided". It went on to say that the management had been trying to establish the most equitable distribution of cuts necessary to "minimise the inevitable reductions in Direct Patient Care Services".

When the health reforms came into effect on April 1, 57 hospitals and other services became self-governing trusts, running their own day-to-day affairs. Within a month Guy's has announced that it is seeking 600 redundancies and the Bradford Hospitals Trust, West Yorkshire, 300.

About 120 more hospitals and services are considering becoming trusts next April. Mr Robin Cook, shadow health secretary, yesterday called on Mr Waldegrave not to approve any further applications until

after a general election. "He cannot press ahead with the second wave of opt-outs while hospitals are already foundering in the first wave," he said. During angry Commons exchanges Mr Waldegrave defended the reforms, saying the government should not interfere in the management of hospitals. "In a service that employs over a million people, it would be ludicrous if ministers or civil servants attempted to run the service from Whitehall." He denied that the trusts had "secret" business plans.

Mr Simon Hughes, the Liberal Democrat MP whose constituency includes Guy's, met Mr Peter Griffiths, the hospital's chief executive, yesterday. He said afterwards he was far from satisfied that cutbacks could be made without serious

consequences for patient care.

Mr Hughes said he had been told during the meeting that it was likely there would be fewer than 150 redundancies at Guy's, with the remaining job cuts being achieved by unfilled vacancies. When hospital managers announced their plans to staff last week they said that they would "attempt to avoid compulsory redundancies."

"It was known that there was going to be a deficit at the end of the last financial year when the plans were put up to the Secretary of State, although the amount was not specified," said Mr Hughes.

The British Medical Association council meets tomorrow to consider a refusal by Mr John Major, prime minister, to meet the BMA to discuss NHS funding.

Most laser printers offer you a year's on-site warranty.

With Panasonic, the tranquility continues.

Most laser printer manufacturers provide a year's free warranty. But at Panasonic, total confidence in our product means we provide twice the cover - a full two year on-site warranty - free of charge.

Knowing for certain that you can depend

on the all-embracing, longer lasting support of Panasonic makes for genuine peace of mind. And significant savings: why pay for maintenance cover when it comes free from Panasonic?

And when it comes to running costs, you can save even more, because, unlike some other popular

laser printers, consumables can be replaced as and when they're needed, totally independently of each other.

Add the superb print quality and graphics resolution that you get from a printer using the finest high grade toner and we believe you'll see the difference. The Panasonic difference is quality plus peace of mind.

Discover more about Panasonic laser printers with a two year on-site warranty. Simply dial 100 and ask the operator for Freephone Panasonic or fax your enquiry to (0344) 853707.

A Panasonic Printer. A Computer's Perfect Partner.

## British Gas yields to price code

By Deborah Hargreaves

BRITISH Gas yesterday agreed to proposals that will impose tough new controls on the prices it charges 17m households for gas. The company also agreed to meet new targets on service standards, accepting that failure to do so could result in new price cuts.

The proposals, which were drawn up by the Office of Gas Supply (Ofgas), the gas industry regulator, limit the amount by which prices to domestic customers can rise in line with inflation for 5 years starting next April. If inflation is low, consumers could even see a cut in gas prices.

But the new regime will put severe pressure on British Gas to cut costs internally and could result in a round of job cuts.

The new formula means that British Gas can raise prices by 5 percentage points less than the annual rate of inflation as opposed to 2 percentage points below inflation under its current formula. The new price regime also puts a ceiling for the first time on the cost of North Sea gas price rises that it can pass on to consumers.

This is intended to give the company an incentive for negotiating cheaper gas supplies and for running its own fields as efficiently as possible. The ceiling indexes the cost of gas using 1990-91 costs as a base year and takes off an efficiency factor of 1 per cent which is cumulative.

British Gas has agonised over whether to accept the new proposals and the company said yesterday the targets would be tough to meet. "It was not an easy decision," said Mr Bob Evans, British Gas chairman, "but we are confident we can continue to generate a satisfactory rate of return and profitability." The alternative to accepting the proposals would have been an embarrassing clash with the regulator and an inquiry by the Monopolies and Mergers Commission.

For the first time, the new price formula links efficiency targets to public standards of service in response to consumers' concerns that cost cuts not be achieved by a reduction in the quality of service. Ofgas will monitor British Gas's response time, for example to gas leaks, and if it consistently fails to meet the standards set, it can be turned over to the MMC which could impose further price cuts as a penalty.

In a bid to encourage energy efficiency, the new formula allows British Gas to add on the cost of energy saving measures to consumer prices. This will offset the cost of helping consumers to put conservation measures into place.

Mr James McKinnon, the director general of Ofgas, called the package fair and reasonable. He said it would mean "better value for money with tougher price controls, guaranteed standards of service and pressure on British Gas to perform more efficiently than ever before."

## Brooke opens talks on political future of Northern Ireland

By Our Northern Ireland Correspondent

MR PETER Brooke, secretary of state for Northern Ireland, opens talks on the political future of the province today, with all parties pledging to do their utmost to reach an historic agreement.

Speaking in Belfast yesterday Mr Brooke said he had been impressed by the way all sides were approaching the dialogue. He said: "I have the same feeling I had when I announced the talks a month ago - that it is a good thing for constitutional politicians and the two governments to have agreed a basis to sit down and talk."

But I hope we can make more of that and use the opportunity to make successful agreements on a wide range of issues."

Today he will open bilateral talks with Northern Ireland's main constitutional party leaders, starting with the nationalist Social Democratic Labour party and moving on to the moderate Alliance party this afternoon.

Unionist leaders are expected to meet Mr Brooke on Friday.

The four constitutional parties involved have been preparing their position papers for the talks, which start with the internal government of the province.

Dublin will join in the talks when they broaden to cover relations between north and south Ireland and between London and Dublin.

Today's meetings are expected to concentrate on the agendas for plenary sessions due to get under way next week.

Mr Brooke said the acid test would come at the end rather than the start of the process.

At the weekend Mr Brooke said that those taking part in the talks "will see off the terrorists". Mr Brooke made his prediction after a meeting of the 1995 Anglo-Irish Agreement, meeting of which have been suspended until July 18.

Building People - Building Business

HENLEY, the foundation for SUCCESS

Management roles are changing. Organisations of all sizes have to be more flexible and able to respond rapidly to the competitive demands of the international marketplace. The role of the individual manager has never been more important for organisational growth.

The successful manager of the 90s needs to possess the key skills of leadership, team development and strategic integration together with greater attention to personal development - the cornerstones of the 'Henley Experience'. An experience we share with over 8000 managers from over 90 countries each year.

We offer some of the most comprehensive and innovative programmes in the world which can be structured to meet the objectives of the individual and their organisation. Formats range from residential Henley based programmes to the renowned distance learning courses and include full-time, part-time and modular structures. Through a unique partnership with industry and commerce we can be sure that every programme fulfils the needs of business today and tomorrow.

## TECHNOLOGY

## Science and the economy

An increase in science and technology teaching at all levels of the education system is essential if Britain is to flourish economically, according to a report published yesterday by the Advisory Council on Science and Technology (Acost).

In spite of efforts to improve the image of science and technology in schools, the study reports that many young people give up studying science as soon as they can. Acost, which advises the UK government on education and science policy, has come up with seven proposals which it believes could help improve Britain's economic growth:

- The number of qualified science and technology teachers should be increased, if necessary by paying them more than their counterparts in other subjects.
- Education from the age of 10 upwards should be broadened to encourage subjects to be incorporated in arts or social science courses.
- Degree courses should be made more useful to employers and relevant to employment.
- An optional fourth year of study should be introduced for science or engineering students who want to go into research.
- There should be more opportunities for mature students to return to studying science and technology subjects.
- New learning technologies, such as video, should be used in higher education to help make lectures more productive and so expand the number of students.

Employment practices should be improved to provide career development which is on a par with those in other professions. On the last point Andrew Bain, chairman of the working group that investigated the employment of scientists in industry and business, said that in terms of pay the worst employer for experienced scientists is the government.

\*Science and Technology: Education and Employment, HMSO Publications Centre, PO Box 276, London SW8 5DT. Price £2.95.

Imagine that your word processor had all the writing scripts of the world at its beck and call. Your invoices to Moscow would be written in Cyrillic characters, your orders to Tokyo would sport beautiful strings of Kanji, and even your personal letters to Paris would have the proper accents.

Unfortunately for linguists, today's computers are not up to the task: an Indian computer cannot handle Hebrew any more than a Greek one can master hieroglyphics. Even an American computer is liable to charge a British customer in dollars when it really means pounds - the same coding represents both currencies.

For many years now, official standards bodies have agreed that there should be an international system enabling all computers to handle the entire range of graphic characters in use around the world, even if the keyboard was used to access only a small proportion of the characters. Computer suppliers would like this because it could offer them a new market.

Until now, such a global system has seemed out of reach. This summer, however, sees the emergence of not one, but two, solutions to the problem. Either system on its own could provide the lead, but if the world ends up with both of them the computer industry could continue in a state of linguistic chaos well into the next century.

The work of the International Standards Organisation. Draft international standard 10646 is the culmination of seven years' work by ISO in encoding all the graphic characters of the world. It comes of age in June when 22 countries will finish voting on whether to convert it into an actual standard.

But just as 10646 has started its final lap, a rival has run on to the track. Unicode, a consortium of companies that have worked on 10646, has simultaneously been taking part in another project to develop a simpler alternative which they believe is more commercially acceptable. This system, called Unicode, has already been sent out for evaluation to some 500 computer companies.

With the code due to be published in loose-leaf form next month and as a book later in the year, it could soon build up commercial momentum.

ISO is therefore in a quandary. If its own standard goes through, Unicode would end up with two standards. On the other hand,

Ian Holdsworth reports on the struggle to devise a computer standard to cover the world's languages

## The script with double meaning

If 10646 fails to win approval, then by the time it comes round in revised form for another vote, Unicode may be far enough out in front to make 10646 seem meaningless.

In an extraordinary move just two weeks ago, the ISO committee that developed 10646 recommended a negative vote in the forthcoming international ballot. Significantly about half of the committee members responsible for the decision were also members of the Unicode consortium. The committee's advice, which will form the basis of the ISO vote, seems to express a determination not to permit the existence of two standards.

However 21 other countries are also voting in June, and many are likely to vote yes. Japan is one of these, because 10646 contains the official Japanese system for classifying characters, unlike Unicode which unified similar characters from different languages such as Japanese, Chinese and

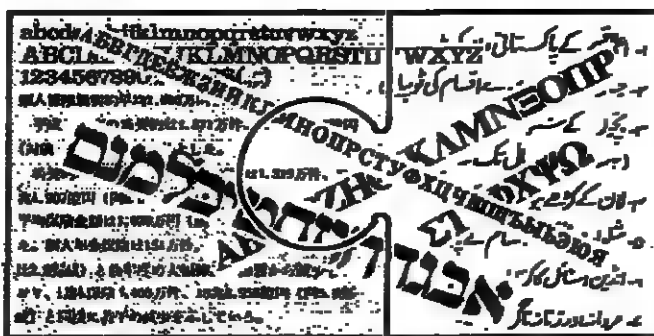

An impressive array of companies has been involved in developing both 10646 and Unicode. 10646 is the work of a committee comprising representatives from many of the world's leading computer companies including IBM, Xerox, Unisys, Apple, Digital Equipment, AT&T, Hewlett-Packard

## Unicode

It holds each character as a 16-bit chunk - a series of ones and zeroes 16 units long. There are about 65,000 ways of arranging the ones and zeroes and this means 65,000 characters can be represented using the code - many times more than with present 8-bit codes such as ASCII.

It has condensed or unified Chinese, Japanese and Korean symbols into a core of characters from which all the Asian languages can be generated. Two thirds of Unicode's 27,000 listed characters are Asian.

It ignores existing conventions for the coding of "control" characters such as "carriage return". It uses "floating" accents which can be applied to any letter.

and Microsoft. Unicode, meanwhile, sprang from a consortium of 23 US companies, again including IBM, Digital, Apple, Microsoft and Xerox. The Unicode companies, restless with the long wait for 10646, started work on their code about two and a half years ago.

With the two systems on collision course, both camps are now under intense pressure to compromise, so that the codes could perhaps be merged. At the moment this is seen as almost impossible - technically and practically - yet circumstances are already dictating the need for an extraordinary effort.

One of Unicode's strongest advocates is Mike Kernaghan, vice-president of the Unicode consortium. He is critical of the ISO code because he believes ISO is not responding

## 10646

It goes beyond Unicode's 16-bit structure to encode data in chunks as big as 32 bits wide. This means that 10646 can potentially store up to 1.3bn characters - far more than it would ever need to.

Each Asian language is coded independently using the Japanese standard in an early proposal to unify similar "ideographs" - ancient Chinese characters.

It is more concerned than Unicode about compatibility with existing computers. It avoids codes already used by computers for "control" instructions. This cuts the available space for graphic characters to 1.3bn from about 4bn.

It has separate codes to represent letter in accented and unaccented forms.

standard, pointing to one character, for example.

The 10646 committee would be unlikely to open up with this sentiment because it needs Unicode's co-operation and does not want to be inflammatory. Yet its members suggest ISO would probably find it unacceptable to dismiss seven years' hard graft on the code. Its work has been based on a set of firmly held principles - technical and cultural - and at the moment it cannot see its way to giving them up.

Jerry Anderson, IBM's representative on the ISO committee, confirms that the overriding concern must be to avoid having two world standards. Recently, he met informally with other ISO representatives in Paris to discuss tentatively how the two codes might be merged. They hoped, said Anderson, to find a way to make some "significant concessions and modifications" that would improve the standard and move it closer to Unicode.

At worst we wanted to accommodate some of the requirements to at least make interworking [between the two codes] possible, and at best to induce a similar flexibility in Unicode's side.

Since that meeting, the 10646 committee has stuck to its principles on which it and Unicode differ. Certain codings which were previously reserved for "control" instructions will be made available for holding graphic characters, as is the case with Unicode.

Unicode, on the other hand, could realistically spread around the world, he says. With enough commercial support it could even become an international standard retroactively, like the current American standard, ASCII.

But such optimism may be misplaced. Unicode has a "snowball's chance in hell" of becoming an international

## HDTV standard is overrated

By Michael Skapinker

Filippo Maria Pandolfi, the European Community research commissioner, is close to concluding a new directive on satellite TV. The directive has the support of the European electronics industry and broadcasters. It also has the backing of Lord Chapple.

Frank Chapple, the redoubtable general secretary of the UK's electrical and electronics union. Now, ennobled, he is president of Britain's television manufacturers' association. Earlier this month he endorsed Pandolfi's efforts to create a single European satellite broadcasting standard, based on the Mac system.

His backing for Mac was not altogether surprising. Mac, based as the European route to high definition television, is a British invention. Far more surprising is that Britain has a television manufacturers' association. The last significant British-owned television manufacturer, Ferguson, was acquired by Thomson of France in 1987.

Who does the British Radio and Electronic Equipment Manufacturers' Association (Rema) represent? Ferguson is still a member, as is the UK branch of Philips of the Netherlands. But of Rema's 15 members, 10 are Japanese. Japanese television manufacturers have been busily building factories in the UK since 1974.

The worrying question for the champions of Mac, such as Thomson and Philips, is why Japanese companies are packing the system. Mac was to be a home-grown European answer to Japan's high definition television.

A 1986 EC directive required all satellite broadcasters to use the European system. They would begin with either D-Mac in Britain or with D2-Mac in the rest of Europe. D-Mac and D2-Mac are not high definition systems, but they do provide better images than those currently seen on European screens. The next step would be for broadcasters to move on to HD-Mac, Europe's own high definition system, giving local companies an advantage over Japanese competitors.

## TECHNICALLY SPEAKING

The directive expires at the end of the year and the Commission hopes to present a new one to telecommunications ministers on June 3. The accord will result in all satellite broadcasters using D2-Mac. So why are Japanese companies supporting a system devised to exclude them? Any one who talks to Japanese electronics executives soon learns the answer. They would have liked the Europeans to adopt Muse. But failing that, the Japanese say they do not really mind what standard the Europeans choose for high definition television, provided they have one. Whatever the broadcasting system is, they say, they will manufacture the equipment to receive it.

The UK-based Japanese set makers proved themselves formidable exporters to the rest of Europe. Sony, which has a factory in South Wales, has won three Queen's Awards for Export. So successful have British-based Japanese companies' exports been that the UK last year had a £271m trade surplus in television sets.

The D2-Mac patent is held by European companies and organisations. They could make life difficult for Japanese companies which request manufacturing licences. Japanese say they will fight any attempt to deny them access to the European high definition industry. It is unlikely that they can be excluded forever.

If D2-Mac does become widely accepted in Europe, Thomson and Philips will have won one battle. The war, however, will not have started. Its weapons will not be directives or government subsidies, but design, price and reliability. Weapons that Lord Chapple's insurers have learned to wield with devastating effect.

## Nedlloyd can give you a logistic headstart.

In transport, storage and distribution there is an increasing emphasis on logistic services. Nedlloyd can give you a logistic headstart in these areas. Our service focuses on managing the physical flow of goods on land, sea and air plus the flow of information.

The Nedlloyd Flowmasters concept is especially developed for this purpose. Thanks to our experience and expertise of 25,000 employees all over the world, our networks in container logistics, road transport, warehousing and distribution are seamless.

We also provide logistic services for specialty goods, such as garments and chemicals. However, we are not limited to the transport of goods alone. We provide stock management, picking/packing, invoicing and other value added services.

Interested in how Nedlloyd can give your business a logistic headstart? Just ask for our comprehensive brochure.

# FT LAW REPORTS

## Rent review issue can be re-litigated

ARNOLD AND OTHERS v NATIONAL WESTMINSTER BANK PLC  
House of Lords (Lord Keith of Kinkel, Lord Griffiths, Lord Oliver of Aylmerton, Lord Jauncey of Tullichettle and Lord Lowry)  
April 25 1991

A LESSEE is not barred from seeking judicial construction, for the second time, of a rent review clause, if there are special circumstances justifying re-litigation of the issue, in that there has been a change in the law since the earlier proceedings and the decision, which was plainly wrong, leads to injustice.

The House of Lords so held when dismissing an appeal by the defendant landlord, National Westminster Bank plc, from a Court of Appeal decision on a preliminary issue, that the plaintiff lessees, Mr Michael John Arnold and others, were not barred from re-litigating the construction of a rent review clause.

LORD KEITH said that National Westminster was the landlord of premises in Fetter Lane let to a firm of chartered accountants. The lease was for 32 years, expiring June 24 2008. It provided for an initial yearly rent of £800,000 subject to review on June 24 1963, 1968, 1973, 1978 and 2004.

The rent from each review was whichever was the greater of the preceding rent and the "fair market rent" at review date.

The "fair market rent" was defined as meaning "such amount as might reasonably be expected to be let at the relevant review date in the open market".

When the first review date came up in 1963 it was referred to an arbitrator. There was a dispute as to whether, under the definition of "fair market rent", the rent for the hypothetical lease for the residue of the unexpired term was to be fixed on the basis (a) that it contained the same rent review provisions as the actual lease, or (b) that it contained no review provisions.

The arbitrator decided that the hypothetical lease should contain the same rent review provisions, and fixed the rent at £1m per annum. In case he was wrong, he decided that if the hypothetical lease contained no review provision, the rent would be £0.2m.

The landlord appealed. Mr Justice Walton held that the arbitrator was wrong and that the hypothetical lease should be treated as not containing any provision for rent review, so that the rent payable was £1.2m.

He refused leave to appeal, and refused to certify a question of law of general public importance to be considered by the Court of Appeal. The lessees then sought to appeal against the refusal to grant a certificate, but the Court of Appeal held it had no jurisdiction to entertain such an appeal.

In the subsequent case of *British Gas v Universities Superannuation Scheme* [1991] 1 WLR 1291, Lord Browne-Wilkinson, vice-chancellor, had to consider the same rent review clause.

He took the same approach as that, in the earlier case, of clear words requiring the rent review provisions to be disregarded, and in the absence of special circumstances, the hypothetical lease should be treated as if it contained no review provision, but in its underlying commercial purpose by requiring the rent reviews to be taken into account.

That approach had been approved by the Court of Appeal (see *Watts v Morrow* [1987] 1 EGLR 129, *Basingstoke v Eastern* [1988] 1 WLR 348).

There were therefore powerful grounds for the view that Mr Justice Walton wrongly construed the rent review clause.

In 1988 the lessees sought to re-open the question of construction. They brought an action for rectification of the lease, and a declaration as to the true construction of the clause. National Westminster applied to strike out the construction claim, on the ground that the lessees were barred by issue estoppel from re-litigating the point.

The matter came before the vice-chancellor. He took the view that special circumstances could prevent an issue estoppel from arising, that such special circumstances included the situation where relevant new material, not available at the time of the decision, had since come to light; and that such new material might include not only the discovery of facts, but also a change in the law.

He said "the question is whether, given subsequent change in the law indicating that the earlier decision was wrong, the injustice of holding the plaintiff in the action bound by the erroneous decision in law in the first action, outweighs the hardship to the other party in having to re-litigate the matter, and the public interest in the finality of legal proceedings".

He had no doubt that justice did require the matter to be re-litigated.

The relevant factors were: (i) there was a continuing contractual relationship of landlord and tenant which would regulate four further rent reviews; (ii) unlike the ordinary case of prior decision by a judge, Mr Justice Walton's decision was not subject to appeal because of the peculiarities of procedure applicable to appeals from arbitrators; (iii) the decision whether or not to permit an appeal was the decision of Mr Justice Walton himself; (iv) subsequent decisions such as *Equity and Law Life* made it strongly arguable that Mr Justice Walton's decision was wrong.

The Court of Appeal affirmed his judgment on substantially the same grounds. National Westminster now appealed.

There was a distinction between cause of action estoppel and issue estoppel.

Cause of action estoppel arose where the cause of action in later proceedings was identical to that in earlier proceedings between the same parties involving the same subject matter. In such a case the bar was absolute in relation to all points decided, unless fraud or collusion was alleged.

Issue estoppel might arise where an issue forming a necessary ingredient in a cause of action had been decided and, in subsequent proceedings between the same parties on a different cause of action, one party sought to re-open that issue.

In *Henderson (1862) 3 Hare 100*, a case of cause of action estoppel, vice-chancellor Wigram, in a statement which had been held to be applicable also to issue estoppel (see *Edwards (1979) AC 411, 430*), observed that there might be "special circumstances" where estoppel did not operate.

The present case was concerned with the nature of such special circumstances.

There appeared to be no decided case where issue estoppel had been held not to apply by reason that in later proceedings a party had brought forward further relevant material which he could not by reasonable diligence have adduced in the earlier proceedings. There was however, an impressive array of dicta of high authority in favour of that possibility.

The House should affirm that there might be special circumstances where further material became available which could not by reasonable diligence have been adduced in earlier proceedings.

The question was whether the further relevant material was confined to fact, or included change in the law.

There was no right of appeal against Mr Justice Walton's judgment because he refused to grant a certificate that the case included a question of law of general public importance. There could be little doubt that he was wrong in that refusal, as was shown in the large volume of litigation on construction of rent review clauses and decisions in that field.

Anyone not possessed of a strictly legalistic turn of mind would think it most unjust that a tenant should be faced with a succession of rent reviews over 20 years, all proceeding on a construction of his lease which was highly unfavourable to him and was generally regarded as onerous.

Estoppel per rem judicatum (by previous judicial decision), whether cause of action estoppel or issue estoppel, was essentially concerned with preventing abuse of process.

In the present case abuse of process would be favoured rather than prevented by refusing the lessees permission to reopen the disputed issue.

The vice-chancellor was right when he said that a change in the law subsequent to the first decision was capable of bringing the case within the exception to issue estoppel.

Special circumstances required the lessees to be allowed to re-open the question of construction decided against them by Mr Justice Walton, his decision being plainly wrong.

The appeal was dismissed. Their Lordships agreed.

For National Westminster: Terence Cullen QC and Hazel Williamson QC (Stephenson Harwood).  
For the lessees: James Munby QC and Jonathan Gaim QC (Freshfields).

Rachel Davies

## SIEMENS

# The doctor can see you now.

The better the diagnosis, the better the prognosis. Which is why scanners play a vital role in modern medicine.

Now a new clinical centre for St Thomas's and Guy's hospitals in London will provide doctors with a different dimension.

Unlike other established scanning techniques, which indicate anatomy, the Siemens Positron Emission Tomography (PET) scanner shows how an organ is functioning. It will therefore make a significant contribution to the diagnosis and treatment of cancer, heart disease and brain disorders such as epilepsy.

Siemens is Europe's leading electronics and electrical engineering company, with over 12,000 employees in the UK. Our business activities range from microchips to power stations: all with one common objective - technology to bring a better quality to life.

Innovation · Technology · Quality : Siemens

For more information please contact Siemens plc on 0832 785891.

## MANAGEMENT: The Growing Business

## New funds launched

Three new UK venture capital funds have been launched despite forecasts that the scale of venture investment will fall by around a quarter over the next two years. All three funds have been set up by established venture capital groups. One is targeted at the small business in inner city areas while the other two are intended to finance larger, development capital stage deals.

The three funds are: **A £20m Inner City Fund** established by 31, the largest UK venture capital group, to back start-ups and established small companies in city centres throughout the UK. Finances for the new fund will come from its own resources. It's first Inner City Fund, set up in February 1988, has provided a total of £15m to inner city companies.

The aim of both funds is to invest small amounts of equity - usually of between £20,000 and £50,000 - in inner city companies. The funds are managed by the government-funded City Action Teams or Task Forces whose brief is to revitalise enterprise and employment.

A £21.5m fund created by Granville & Co, a private investment bank. The Third Granville Modern Management Trust fund will finance management buy-outs and buy-ins, debt restructurings and acquisitions. Granville's first fund, launched in 1985, has fully invested £10m, while a second fund, created in 1988, has invested 70 per cent of its £21m.

A planned £140m European Acquisition Capital Fund launched by Enskilda Ventures, part of the Scandinavian banking group. The fund managers have raised the first £20m towards the fund which will complement Enskilda's existing Scandinavian Acquisition Capital Fund.

Venture capital in the UK faces a difficult few years according to a survey carried out for the Venture Capital Association last year. The scale of investment by the industry is expected to fall by 20-30 per cent over the next two years from the 1989 level of £1.65bn. The difficulties which provide finance to the venture capitalists are demanding better performance from funds they back.

Charles Batchelor

**T**he 30 acres of Welsh hill pasture which drop steeply away from Tony and Pam Craske's hill-top cottage above Pontypool could, in return for a lot of hard work, produce an annual income of £5,000.

But the Crasokes have rejected sheep as a means of boosting Tony Craske's retirement pension, opting instead to produce a variety of goats' and cows' milk cheeses in the farm buildings alongside their home.

Abergavenny Fine Foods now combines cheese-making with a distribution business used by other farmers to bring their cheese to market. In the space of nine years the Crasokes have created a company which employs eight people and has annual sales of nearly £500,000. "None of the other farms around here employs anyone outside the farmer's family," says Tony Craske.

Although the Crasokes are not of farming stock - they bought the Pant-Ysgawn Farm after Tony retired from an engineering career with ICI - they illustrate an important shift taking place in the farming sector.

Pressure on agricultural incomes is concentrating the minds of those who run farm-based businesses on attempts to add more value to products at source, instead of shipping raw materials to processing plants which will take the larger share of profits.

Tony and Pam Craske came into the business making cheese when they wanted to use up surplus milk from the small herd of goats they had bought to meet their own needs. They made their first sales in nearby Abergavenny market but began supplying Sainsbury's and other large supermarket chains as the result of a cheese promotion campaign run by the Welsh Development Agency (WDA).

It soon became apparent that the Crasokes had insufficient space in their farm buildings both to keep goats and to make the cheese so the goat-keeping was subcontracted out to a farmer in west Wales. The milk is now frozen on the farm and brought to Pant-Ysgawn once a week for processing.

The help which the Crasokes received from the WDA came under a programme known as the Welsh Food Initiative, established in 1985 to help food producers diversify and add value. This programme has in recent years become part of the recently created Welsh Food Promotions campaign set up to

## Rural enterprise

## Why Welsh farmers are saying 'cheese'

Charles Batchelor reports on adding value at source

market local produce.

Foodstuffs might appear a relatively simple product group compared with say, high technology electronics, but the growing complexity of hygiene legislation means that a high degree of sophistication is required. Tim Lacy-Halbot, food development executive for the WDA and Gwent County Council.

One of the main problems facing the rural food producer is that of scale. Few farmers are in a position to produce enough to be able to afford to market their product professionally or to create a business of any worthwhile size.

In an attempt to overcome this problem Tony Craske is involved in a WDA-backed initiative to process and market a cow's milk cheese called 'David's'. The idea is for selected farmers to supply "blanks" of raw cheese to a central processing plant where they will be matured, packed and distributed.

At Pant-Ysgawn local farmer is providing the raw cheese for processing at Pant-Ysgawn but this operation will be moved to a larger unit in Abergavenny within a few weeks and more farmers are being lined up to supply the cheese. Craske hopes to sell £130,000 worth of St David's in the first year, rising to £200,000 within three years.

A similar leap in scale has been made by David Morgan (right), founder of the Welsh Venison Centre at Bryn near Brecon. Morgan began rearing deer six years ago for sale as breeding stock and three years ago moved into producing his own venison.

Limited to just 20 acres on his father's farm, Morgan found that demand for venison had outstripped his own ability to supply. Morgan still rears his own deer and he hopes to double the acreage available but he buys in three-quarters of his requirements from other breeders. The rest of the farm acreage is taken up by sheep, pigs and daffodils.

He sees great potential in venison, a low fat meat which has been growing in popular-

David Morgan: escaping from the farmer's weak position in the commercial hierarchy

ity. Deer are more efficient at converting grass into meat than cattle and the gross profit margin per acre from deer is nearly twice as high.

All present breeding and selling deer accounts for about half of the Welsh Venison Centre's £200,000 annual turnover but venison is due to increase its 30 per cent share. The remainder of sales are accounted for by the manufacture and installation of fences, gates and other equipment for handling deer.

But Morgan is motivated not just by a desire to increase the income of the farm, which must support his father, his wife and himself. Equally important are a wish to escape from what he sees as the farmer's weak position in the commercial hierarchy and a desire for a more varied life than on an ordinary farm.

graphic examples of how clever marketing has turned a low-value commodity into a premium product.

Geoff and Gwenllian Lockwood decided to diversify their business activities in 1984 by bottling for sale the water which bubbled out of a spring by their hillside cottage some 13 miles from Lampeter. Initially the water was put into plastic bottles and sold locally.

The growth in the public's demand for bottled water convinced the Lockwoods that they could build a bigger business so they teamed up with local investors, one of whom had a background in the hotel and catering industry. He persuaded them that there was an unmet demand for an upmarket bottled water. "We felt there was a gap in the market for a fine looking bottle to sit on the table alongside a bottle of wine," says Gwenllian Lockwood.

The Lockwoods dropped the clear plastic bottle they had been using in favour of a specially designed glass bottle in brilliant blue. Production moved from the hillside down to a small industrial estate in Lampeter in 1989 and sales took off. Lockwood expects European legislation will require all waters to be bottled at source - Tynant is brought by tanker - Lampeter - so they are planning to build the bottling plant back to the spring.

When the new bottling plant is up Tynant will double its present workforce to 60 with a further increase to more than 80 expected shortly after. A preliminary meeting with the local planning authority is favourable so they are hopeful of getting planning permission.

Tony Craske has been less successful in his attempts to expand. He has been unable to gain permission to expand the buildings on his land because he is in the Brecon Beacons National Park. "If I wanted to expand I could put the building up but I can't get permission for cheese-making," he says.

The result is that his business will shortly be moving to Abergavenny into one of a cluster of units specially built to house food companies. The units which have been drawn up to protect the rural landscape sometimes run counter to attempts to breathe new economic life into the country.

## In brief...

Small businesses spend an average of £9,000 a year on external financial advice, of which 64 per cent goes to accountants' fees, according to a survey by KPMG Peat Marwick. The accountants questioned 150 companies with turnover of up to £5m and based in the south-east.

The bank manager is the most popular source of advice on raising finance and is used by 58 per cent of companies, compared with 46 per cent which consult accountants. However, 10 per cent of firms polled turn to their accountant for seeking advice on corporation tax and accounts preparation.

A programme to inject the techniques for teaching enterprise into schools in Hungary has received a further £32,000 of finance from the UK government's Know How Fund. The extra money will allow Durham University Business School (DUBS), which has been responsible for the programme, to evaluate progress and to revise its manual of enterprise teaching practice.

The Hungarian ministry of works plans to extend the project to 250 schools from the present eight.

Contact DUBS: Mail Hill Lane, Durham DH1 3JB. Tel 091 374 2211.

Evidence of the extent to which recession has hit the liquidity of small businesses appears in the level of savings they have at their bank or building society. Net savings by small businesses have remained static at around £27bn since October 1990 compared with average monthly increases of £350m in the earlier part of the year, according to a survey by National Westminster Bank.

The picture varies according to sector with service companies having more surplus funds available than manufacturing and construction companies. Savings of retail businesses are very low.

Businesses in the south-east have more funds on deposit than those elsewhere in the country while liquidity also improves as businesses increase in size. Twenty five per cent of firms with one or two employees have surplus funds on deposit. Of businesses with five to nine employees 34 per cent have surplus cash while nearly 40

per cent of those employing 10-49 people have business savings.

A do-it-yourself kit to help small firms cut the cost of crime is to be devised by the Confederation of British Industry (CBI) and Crime Concern, a government-backed consultancy. Fraud, theft, "shrinkage" and arson cost small businesses an estimated £28m a year.

The crime audit pack - a series of self-study units to enable the small business owner to carry out an assessment of exposure to the risk of crime - is to be drawn up and tested over the next few months. Crime Concern will consult the pack on the basis of discussions with owner managers of retailing and construction firms in London, manufacturing companies in Liverpool and hotels in Brighton.

The businesses chosen will receive surveys of their physical security, their financial and stock control systems and management and employee attitudes.

Contact CBI Tel 071-379 7400 or Crime Concern Tel 071-933 2222, ext 2180.

A series of two-hour workshops to explain the workings of new legislation on the taxation of benefits in kind to directors and employees is to be held in London. Staff penalties apply to businesses which fail correctly to complete Inland Revenue form P11D.

Contact CPE Courses, Aldine House, Aldine Place, 140/144 Uxbridge Road, London W12 8AT. Tel 081-749 7467. £70 plus VAT. Course dates May 1, 2, 7, 20 and 21.

A guide to the issues which confront small and medium-sized businesses which plan to export to continental Europe has been prepared by National Westminster Bank and accountants Ernst & Young.

Europe: Your Next Step provides illustrative case histories of three companies expanding for the first time and looks at questions such as standards, repatriating profits, border delays and product liability.

## Jackie Wulschlager

as the Fire, and Helen Field (though  
ideal purity is not a pot-

that cannot reach the knee it rests on.  
So to the landscapes, to trees reduced to a spidery formula, shrouded in mist that hides the sheer difficulty of setting objects together in a coherent pictorial world. His solution to his difficulty was simple, direct and as we now see, necessary. By "going abstract" he simply accepted that for him image, form and space were to be simplified, flattened, schematised, brought to the surface: that was all he could manage, all he could do. And so he has continued, more or less, these 40 years.

solists all made their marks; the mezzo Susan Bickley with lovely tone in the later movements, the tenor Kim Begley in ringing style, David Wilson-Johnson soberly moving in the Qui tollis. Amidst this whole exuberant reading, the famous irruption of warning trumpets made no great shock; more typical was the joyful, dancing close, which Davis plainly liked.

Soprano and bass lent their wordless voices to the slow movement of Nielsen's Symphony no. 3, "Stimfonsens pænsia", which Davis addressed with lively purpose. Clean formal lines, precise attention to Nielsen's original color contrasts, terrific energy: the Allegretto and Finale, indeed, were enthusiastic to the point of violence.

to have any *cliff-hanger* effect, even at any one time. But *that* was great fun. If heard at suitably rare intervals, it is film-music for a documentary with aspirations; it goes on for a long time, deploys enormous forces with sovereign ingenuity, is pictorially dazzling and symbolically quite inert.

Mehta ~~played~~ its episodes with so professional a hand as to keep one's ears pinned back, and the LPO played up splendidly. (The horns ran into some bed luck, but earlier the solo-horn postlude of the song "September" far outweighed those lapses.) He stretched the "Alpine Festival" hard to extract every expressive drop, and still more the *Barbirolli* epilogue: I remembered a late *Busch* performance that milked it to the end of *Ein Heldenleben* in just such a way, moving my father to tears.

This time, no tears were prompted: the post-climb peroration was ~~musically~~ imposing, but nothing more. That might have been *Mehta's first* - but ~~more~~ likely, the music ~~had~~ nothing more to offer. ~~Mehta~~ knew well enough when a vein was exhausted, and in the Alpine Symphony the ritual runs out.

■

Andrew Davis and the BBC Symphony may have ~~been~~ a new speed ~~music~~ in Haydn's "Nelson" Mass on Friday at the Festival Hall, but it was a tonic to hear. There were no signs of complaint from the players, despite the violins being revved up to escape-velocity in

It would be some compensation in report that despite everything else, the Opera casts triumph. But there is nothing to sustain the identity of the ballet when it is so cursorily exposed and so isolated upon the stage, and the dancers like to appear lost. There is also little refinement to the production. Certain vital moments are ignored or skimmed: since the interior of Albrecht's cottage is open for all to see, the hiding of his sword is futile, while the wailing of the Gipsies urging the cross on her grave in Act 2 is never made clear.

What can be, in a production such as that at the Kirov, work so beautiful which emerges as light from its interpreters here? It was a frosty one in technique and ill-justified smothering. I was lastest with the Loidiers with the customary skill, her dramatic talents need their support (and the restraints) of a sounder staging to be seen as their best. For Anna, it was Patrick Dupond whom I found less than convincing. Fournier Clerc made something exquisite at the second with Charles Jude, since both artists have a clarity of technical style and a rational precision, and summoned up the spirit of the real Saint. The supporting

**A**s Taiwan's ruling Kuomintang (Chinese Nationalist party) prepares to end a 42-year state of 'war' with the communists in Peking, it is bracing for the first time to fight for its own survival.

Tomorrow, President Lee Teng-hui will announce the end of the 'period of communist rebellion', declared by Chiang Kai-shek's Nationalist government in 1949, one year before being driven off the mainland by Mao Zedong's communist forces in 1949.

In one stroke, Mr Lee will set Taiwan rolling towards relative democracy under a representative government, and also open the door to a new relationship with Peking.

To bolster their claim to be the real government of China, the Nationalists suspended the constitution and the president assumed extensive emergency powers during the 'rebellion'. They also froze in office indefinitely all mainland-elected members of both the National Assembly, which itself amends the constitution and elects the president, and the legislative Yuan, or parliament.

Four decades on, still represented in these two bodies by a minority of Taiwan-elected members among a sea of ancient, war-torn and doddering mainlanders, the general public rose up in mass protest last year, demanding rapid and thorough electoral reform.

After more than 200 meetings involving thousands of people, the KMT came up with a constitutional reform plan that the old cadres in the assembly reluctantly passed in exchange for party cash. When President Lee tomorrow ends the state of war with China, the old guard's tenure will be ended. Then the Taiwanese will elect a new parliament and National Assembly.

The new assembly, to be elected at the end of this year, will go on to debate further reforms such as direct presidential elections, whether to opt for a presidential or cabinet system, and the restructuring of electoral and administrative areas.

The KMT regime will now have to prove its legitimacy at the ballot box, and in theory it is laying itself open to a fair fight. However, to KMT conservatives who dream of reconquering China, and to the younger Taiwan-born cadres who have vested interests in the maintenance of the status quo, defeat by another party is unthinkable.

Thus one of the most controversial parts of the KMT's reform plan is that the president will retain his emergency powers. He will also remain directly in charge of the power-

## Taiwan's bridge to the mainland

As Taipei prepares to end its 42-year-old state of 'war' with China, Peter Wickenden reports on the challenges facing the tiny island state

ful National Security Council, which co-ordinates intelligence and anti-subversion activities. Mr James Chen, deputy secretary-general of the opposition Democratic Progressive party, says: "The president will still have dictator-like powers. The National Security Council has outside legislative control." The DPP fears that the council, and two related bodies, will direct their activities against the still-outlawed Taiwan independence movement as 'the threat from China's communist regime diminishes'.

President Lee assured the nation in a speech last week that he would use his powers prudently.

The new National Assembly and parliament will also uphold the government's most enduring shibboleth - that it is the sole legitimate government of all China. About a quarter of the seats in the two bodies will be reserved for nominal 'mainland' representatives, who will be elected in Taiwan but have no constituency. This arrangement serves to convince Peking that the island is not claiming to form a truly independent government, because it retains an imagined link with the mainland.

The KMT's plan also includes a few seats for representatives of Chinese communities overseas. The KMT believes ethnic Chinese worldwide should have a say in the future of their homeland, and that some of them are rich and powerful enough to lobby foreign governments on Taiwan's behalf. The DPP wants these seats scrapped, arguing that the loyalty of anyone who holds two passports and rarely visits Taiwan is questionable. The DPP's Mr Chen thinks the KMT's continued monopoly of television and radio will prevent his party getting more than a quarter of the votes in the new National Assembly, and that this will enable the KMT to dictate the course of future reforms.

But even with the dice heavily loaded in the KMT's favour, the DPP won a fifth of the contested seats at a general

President Lee Teng-hui: new relationship with Peking

election in December 1990, held to fill seats vacated by mainlanders who expired in office.

Under the KMT's scheme, the new legislature will not be elected until late 1992, and although the new National Assembly is to be elected this year, it will not elect a new president until Mr Lee Teng-hui's six-year term is up in 1996.

That gives the KMT a breathing space in which to shore up its image in the public policy areas where it has fared badly: corruption, law and order, a seriously overloaded infrastructure, appalling pollution, and squalid urban living conditions.

Conservative KMT premier Mr Hau Pei-tsun has thus conceived a Six-Year Plan costing \$2 trillion New Taiwan dollars (more than \$300bn), which requires bond issues on an unprecedented scale. It also includes a new north-south motorway, a high-speed railway, several urban rapid transit systems, a fourth nuclear power plant, airports, industrial zones, parks, leisure facilities, and shopping centres.

Starting just weeks after the end of the 'war', the Six-Year Plan is already helping Taiwan break out of diplomatic isolation, which the citizens have often meant embarrassment and inconvenience in foreign

travel and business. Anxious to get a slice of the public works pie, France, Germany and Italy have all recently broken diplomatic taboos by sending senior officials to Taipei, while Australia, New Zealand and Canada have ignored Peking's protests about violation of its 'sovereignty', and negotiated direct air links. European countries are likely to follow.

From a weak point a year ago when it was ravaged by factionalism and forced to bend to public pressure, the KMT is beginning to pull itself together. In gradually strengthening and legitimising its rule by reform, it also hopes to weaken and supplant growing support for the Taiwan independence movement.

Opinion polls suggest that rather than outright independence, the Taiwanese want two things that are contradictory, and are pushing the KMT towards pursuing them: international recognition and the maintenance of their de facto independence; and an open policy toward China that gives the Taiwanese freedom to go there and make money.

Taking this into account, the KMT's long-term goal, with no timetable attached, seems to be a kind of superficial unification with the mainland that would leave Taiwan with its government, its system and its own international connections intact. Anything remotely similar to the Hong Kong arrangement, where Peking ultimately acquires control, would be regarded as an unacceptable sell out, which the KMT would not risk attempting.

Jumping the gun that ends the war with a confidence born of investment dollars and economic clout, the government on Sunday sent a second official delegation to talk to Peking for the first time in 40 years.

Nominally private but mainly government funded, the Straits Exchange Foundation is headed by top KMT politicians and takes its orders directly from the cabinet's Mainland Affairs Commission.

Top KMT mainland policy architect Ma Ying-jiu says that unification, and even direct trade and transport across the Taiwan Straits, are a long way off. The SEF's first job is to facilitate 'people-to-people contacts', in order to eliminate hostility and build up mutual trust and recognition.

When the SEF group returns from its week-long 'courtesy visit' to Peking, Taiwan will have recognised the existence, though not the legitimacy, of the enemy regime. How fast Taiwan continues to open up will depend on the warmth or otherwise of Peking's reaction.

## Joe Rogaly Cardboard citizens

Most Londoners squirm when they encounter a street beggar in the centre of the city. Is this someone in genuine need? A threat, a potential mugger? A lazybones who prefers to collect both the dole and coins from passers-by rather than take an unappealing manual job? It is impossible to tell. The result is that every decision to proffer or withhold one of the coins that jangle in your purse or pocket is taken on *ad hoc* grounds. The temptation to walk on by is strong, and not easily or often overcome. Sometimes there is an especially plain-looking young face, out comes the silver. Sometimes a larger youngster looks menacing enough to be worth buying off. Pay again.

This is absurd. You expect beggars in Bombay or Calcutta, India is a Third World country within which a First World middle-class is rapidly emerging. The rise of the tide of street people in New York over the past decade has been striking, but here again there is no surprise. The failure of the United States to raise the standard of living of most of its black and many of its Hispanic citizens is well-known. In France the steady inward flow of indigent North Africans accounts for at least some of the unfortunate ones seen on the streets.

London is supposed to be different. The British welfare state was designed to eliminate the need for begging among all sections of the population. It is self-evidently not doing so. The reason why is plain. What we are witnessing is a spin-off of the Thatcher years. That this is so is suggested by an intriguing set of statistical tables in the latest issue of *Economic Trends*, published by the Central Statistical Office (prospectus: H.M. Treasury).

The CSO's annual analysis of the effects on household income of taxes and benefits has been reworked for earlier years, mainly to adjust the numbers to take account of family size and composition. This makes comparisons as close to reality as possible. A freshly-adjusted 1979-80 series is therefore available. "The

main conclusion," says Economic Trends, "is that the distribution of income has become more unequal over the 11 years".

Yes, yes, I am aware that "more unequal" does not mean that the poorest are necessarily worse off in absolute terms; it may be that their incomes have simply not grown as fast as those of the rich. But consider the implications of what Economic Trends has to say. The official statisticians try to get to the heart of the matter. Taking raw material from the continuous family expenditure survey, they record all cash income after tax. This includes pay, dividends, and state benefits. They then subtract indirect taxation such as VAT, and in some tables add a figure for assumed benefits in kind, such as state education and health services.

The bottom line tells the story. In 1979 the poorest fifth of all households accounted for 9.5 per cent of post-tax

assumed benefits in kind, but not very much.

There is little doubt that the relative living standards of the lower income groups have deteriorated since these figures were compiled. The 1988 budget was a bonanza for the rich. The hard-nosed social security reforms of Mr (now Sir) Norman Fowler, introduced in the same year, were hardly a bonanza for the poor. The first full year effect of these regressive measures was felt in 1989. Even after rebates the poll tax, introduced last year, almost certainly cost the lowest fifth of households more than the special increase in social security payments given to them to offset it. This year, to offset the cut in local taxation, VAT is up again, to 17½ per cent. We have seen how that hits the worst off.

We are talking here about state pensioners, single mothers, families with large numbers of children whose head is unemployed and unlikely to return to work, and so on - some 11m individuals in all. Many of these are people who are unlikely to own their own homes, as some 70 per cent of the English do. Their children often cannot afford either to rent in the shrinking private market or to buy. It is hardly surprising that such an "underclass" should throw off a few beggars.

It is not that the Tories are unconcerned. Last Friday Sir George Young, the housing minister, opened a 45-person shelter for ex-residents of cardboard city, London's mini-shantytown. He was pushing his department's "rough sleepers" initiative. The new shelter, in the financial centre itself, is run by the St Mungo association as a joint undertaking with the government, Business in the Community, and Islington council. It is a worthy initiative: St Mungo sets out to rehabilitate its guests, with the aim of helping them find jobs and places to rent.

I do not know what better there is to do: a Labour government would spend a bit more, and I guess a Tory government might further increase VAT to finance public sector services. But neither is proposing a return to 1979 tax structures. Yet in Britain, in 1981, there should be no reason to beg.

### The British welfare state has self-evidently failed to eliminate the need for begging

income (before benefits in kind); in 1988 the figure was 6.9 per cent. The share of the second lowest fifth fell slightly. The middle bands remained more or less level. The share of the top fifth rose from 37 per cent to 44 per cent, no doubt adding to the ranks of people whose feelings of guilt may make it pay to beg. All this is after the redistributive effect of the welfare state.

The explanation lies partly in the severing of the connection between benefit increases and average earnings, and partly in the shift from direct to indirect taxation. Raising VAT from 10 per cent to 15 per cent in 1979, plus other indirect tax increases, hurt the very poor. They paid 21 per cent of their gross income in indirect taxes in 1979 and 39 per cent in 1988. The top band enjoyed a slight fall - from 21 to 30 per cent. The disparity is somewhat less when you take into account

## LETTERS

### Shades of economic development

From Dr Bob Mason.  
Sir, Stanley Katz made a number of interesting points in his article "East Europe should learn from Asia" (April 29) about the problems inherent in eastern Europe's adopting the "liberal" free market approach to entry into the world economy. Proposing the state-interventionist or "corporatist" strategy of Japan and the newly industrialised countries (NICs), Katz's solution certainly appears viable in the light of the NICs' experience from the 1950s to 1980s.

However, two points are worth making. First, although there are signs that Czechoslovakia and Hungary are beginning to adopt a "corporatist" approach (in contrast to Poland's liberal free market policies), because of a short-sighted economic focus, it is doubtful whether the OECD states and international banking institutions would offer political or economic support to countries adopting such a long-term export substituting strategy (a core element in the success of NICs). The debt problem in eastern Europe in particular would need to be radically reduced for this approach to get off the ground;

but witness the current political row over the 50 per cent write-off of Polish debt to western governments.  
This raises the second point in that any strategy adopted in eastern Europe, as Katz rightly concludes, will need public support. However, the social problems of the NICs have often been played down in the west (even in Japan last year this was manifested in urban unrest in Osaka). In particular, the often appalling conditions of female industrial workers in NICs demonstrates the social price paid for "success" in the world economy.

These problems may well be repeated in eastern Europe unless greater forms of political and industrial democracy are developed, whereby the populations achieve a genuine involvement in changes in their societies. This is not utopianism, but a political necessity. It is in the interest of neither east nor west to see social unrest pushing countries such as Poland into authoritarian solutions in relation to free market reforms.  
Bob Mason,  
Lecturer in industrial relations,  
University of Strathclyde,  
50 Richmond Street, Glasgow

### Cutting the thrust of competition

From Mr David Blunkett.  
Sir, Your editorial "Steel: crisis, what crisis?" (April 29) raises some interesting questions about how Britain obtains fair competition while retaining what is left of its own industry. It was Britain, after

all, which suffered 50 per cent of the cutback in European steel production in the 1980s, clearly shown in the following statistics.  
David Blunkett,  
MP for Sheffield Brightside,  
House of Commons, SW1

High speed steel bar imports (tonnes) 1990	
From EEC	2,228
From EFTA	1,095

Import penetration 1970 %	6

Tool steel bar imports (tonnes) 1990	
From EEC	7,660
From EFTA	3,422
From others	4,448
UK producers deliveries	15,694
Total deliveries	72
Import penetration 1990 %	72
Import penetration 1970 %	4

### An anomaly in the constitution

From Mr Julian Rowe.  
Sir, What welcome relief to read your leader "Challenging the constitution" (April 29). Electoral reform and especially fixed term parliaments are vital.

There was however one major omission - the removal of the Monarch's constitutional powers. There continues to be an anomaly in that the fair society we strive to create is one based on advancement through merit and yet at the same time the head of state is a hereditary position. Which political party will grasp this thorny issue?  
Julian Rowe,  
299 West 10th St, New York

### Fax service

### Pensions: the unacceptable wait

From Mr Bryn Davies.  
Sir, Mr Brian MacMahon, chairman of the National Association of Pension Funds, tells us that rather than having a compulsory equalisation of pension benefits for men and women it would be better "made up a voluntary and planned basis within an acceptable timescale". (Letters, April 26). What he is mainly against is compulsory retrospective, which he says is "...both impractical and expensive".

He does not explain why retrospective is impractical, and I suspect that his use of the word, except in relation to a limited number of schemes which have kept inadequate records, is simply rhetorical. What is more understandable is the pensions industry's opposition on the grounds of cost. But even here most of the figures I have seen quoted as for the overall cost have been unreasonably high and in some cases absurd. They seem to have been put forward more as part of a propaganda war than as a serious actuarial assessment.

Pension costs are notoriously difficult to pin down. But the impact of the additional costs of equalisation will be much lower than often suggested, for the following reasons.

a significant number of schemes have already equalised benefits (see the NAFP's own survey);

many of the schemes which have not equalised benefits in theory have done so in practice, for example allowing men to retire early on unreduced benefits;

for many schemes, lowering the retirement age for men means significant savings on the cost of death benefits and ill-health pensions;

costs can be spread over a long period and do not all have to be met "up-front".

Mr MacMahon showed no understanding of unequal benefits now clearly being against the law of the land. He seems to be aligning himself with the protesters against the poll-tax who campaigned under the slogan "can't pay - won't pay".

When the NAFP say that there should not be any element of compulsory retrospective, it means that it will take 40 years or more before all discrimination in pension schemes is eliminated. This is clearly unacceptable. We can only hope that a more constructive response is forthcoming from the pensions industry.  
Bryn Davies,  
director and secretary,  
Union Pension Services,  
50 Trinity Gardens, SW9

**W**HEN you first handle a Patek Philippe, you become aware that this watch has the presence of an object of rare perfection.

We know the feeling well. We experience it every time a Patek Philippe leaves the hands of our craftsmen. You can call it pride. For us it lasts a moment; for you, a lifetime.

We made this watch for you - to be part of your life - simply because this is the way we've always made watches.

And if we may draw a conclusion from five generations of experience, it will be this: choose once but choose well.

A Patek Philippe - because it's for a lifetime.

FINANCIAL TIMES SURVEY

SINGAPORE

Tuesday April 30 1991

ECONOMY: government  
signals optimism as gloom  
begins to lift, Page 4

Tower of Raffles City rises above the old colonial buildings

Singapore's success  
as an entrepôt  
trading nation has  
given it a standard of  
living that is second

only to Japan in Asia. However,  
many sections of the island  
republic's multi-racial society are  
seeking changes. Paul Taylor  
and Peter Montagnon report

Preparing for  
the next lap

ONE of the hottest selling items in Singapore's book shops this year is a hardback called *The Next Lap*. For just \$89 the government-sponsored book offers Singaporeans a glimpse of the future that Singapore's government and intellectual elite has mapped out for them into the next century. The book's title and content are significant. Last year saw the tiny island republic celebrate its first 25 years as a sovereign independent nation. Then at the end of November Singapore witnessed its first change of prime minister in 31 years as Mr Lee Kuan Yew stepped aside for a second generation of groomed leaders led by Mr Goh Chok Tong.

Prime Minister Goh and his team have inherited responsibility for a multi-racial country of just under 2.7m mainly ethnic Chinese people whose success, as an entrepôt trading nation, has given them a standard of living, measured by a \$12,000 per capita gross national product, second only to Japan in Asia and ahead of many European nations. However, they are increasingly demanding change.

Singapore, and its leaders including Mr Lee Kuan Yew, who remains a powerful figure

as senior minister and secretary-general of the ruling People's Action Party, can be proud of most of what has been achieved. Even though, as government critics suggest, it has been at the cost of creating an antiseptic and dull society which leaves little room for individual creativity or imagination and no room for real political opposition - as those who have dared stick their heads above the political parapet have discovered.

Even some of the PAP's younger backbenchers such as outspoken Mr Davinder Singh, a lawyer who probably speaks for many who are dissatisfied with the style of government, complain in parliament that "government runs virtually every aspect of our lives."

Singapore is a meritocracy run by a hand-picked, well-paid elite who feel that the rights of the individual must be subservient to the perceived greater good of the community. Singaporean-style parliamentary democracy has been tailored to this end.

Such concerns have their roots in Singapore's relatively recent birth as a nation. After surviving the trauma of Japanese occupation, Singapore won independence from

Britain only to be thrown out of the newly-created Malaysian federation a few years later. Since then, Singapore's older generation of leaders have mostly succeeded in channeling this sense of isolation and vulnerability into a powerful driving force for economic advancement. This is in spite of the substantial number of part-time, elderly and other poorly paid hourly workers who have not fairly shared in Singapore's economic rise.

Nevertheless, a panoramic view of the city reveals a bustling port, the busiest in the world, skyscraper office blocks rivaling those in Tokyo, New York or London, and smart, clean, streets and highways. There are hefty fines for littering, smoking in public places, jay-walking and many other misdemeanours. The mass transit underground system is almost as good, and much less crowded than Tokyo's, Changi airport, with its new second terminal, is a symbol of national pride and efficiency.

These achievements, particularly in the field of telecommunications and information technology, have a longer-term aim. Singapore sees itself as the Switzerland of Asia, a communications, business and economic hub for the region.

The list of multinational companies with manufacturing facilities and/or regional headquarters in Singapore proves the policy has worked. As big neighbours such as Indonesia, Malaysia and Thailand get on the fast track of development, and Indochina opens up, there will be competitors but, as Prime Minister Goh says: "We believe we have many years of head start."

Singapore's economy, in spite of a few hiccups, including the recession of the mid-1980s, has thrived. Last year exports rose by almost 10 per cent to a record \$48.2m - almost half as much again as the country's GNP, while its foreign exchange reserves, believed to be understated, grew by \$4.9m to \$48.5m.

This year, the government is forecasting GNP growth of between 3 and 6 per cent, down from 8.3 per cent last year. Based on an impressive first quarter performance, growth is likely to be at the top end of this range or above. This wor-

ries the country's cautious economic planners who are always alert to the risk of overheating and who believe the maximum sustainable non-inflationary annual growth rate is about 6 per cent.

Singapore is short of land, but an even more critical constraint is labour. Government planners reckon that the country could accommodate 4m people and has set a target birth rate of 50,000 a year, but in spite of an active campaign to encourage a higher fertility rate, birth rates are falling to match the population replacement rate. There are political constraints on expanding the substantial percentage of imported labour.

To offset these weaknesses the government is encouraging labour intensive manufacturing industry to move offshore, particularly to its lower wage cost "growth triangle" partners, Indonesia's Riau islands, and Malaysia's Johor state.

However, Singapore recognises that it must maintain a cost competitive manufacturing base, even if the service sector, and financial services in particular, continue to account for a growing proportion of GNP. Therefore it is attempting to move local manufacturing further up the capital intensive technology ladder identifying and promoting niche high technology industries such as bio-technology.

Continued economic success is important for political reasons. As Prime Minister Goh says: "So long as the economy is growing, there is plenty for everybody, I don't think people will fight over small things. But if the pie is shrinking, that will be the real test of whether we are cohesive, solid or whether we are fragile."

Singapore's new prime minister accepts that gradual changes, to make Singapore a more gentle, gracious, compassionate and entrepreneurial society with less government intervention and more privatisation are necessary.

In spite of some immediate changes, there is still some scepticism among some Singaporeans that Mr Goh will, or can, deliver on all his promises. Critics point out that many of the most restrictive laws, including the internal security act, are still on the

statute books, and likely to remain so for some time.

This is probably because while Singapore's new leaders accept that some changes are inevitable they worry about speed and direction. While it is said the people trust the government more than their stockbrokers it is apparent that the government does not believe Singaporeans are mature enough to make all their own decisions - for example on how they spend or save their money.

Rapid change in Singapore is therefore unlikely. The government is trying to foster a Singaporean identity, defined in terms of shared or common values - most of which would have been readily accepted in the Victorian West - while emphasising the importance of preserving ethnic roots, be they Chinese, Malay or Indian.

Perhaps the greatest dilemma Mr Goh's team faces is how to pace the next lap. If Singapore's rules and regulations are eased too quickly the government risks losing some central controls. If change is too slow, or fails to materialise, the expectations Mr Goh has built up among Singapore's younger citizens in particular, could result in another setback in popular support for the PAP at the ballot box in general elections due by the end of 1993. The wrong pace might risk Singapore slipping in the economic sweepstakes of the fast-growing region in the world.

## SINGAPORE

■ POLITICS: critics argue the nation has a stage-managed parliamentary democracy

## Quiet grumbles among the partners

POLITICS, Singaporean style. Most of the time, a well-organised gentlemanly affair, based upon consensus and a tried and tested partnership between government, private sector and unions where meritocracy usually triumphs.

Critics argue that Singapore is a stable, stage-managed parliamentary democracy. Although elections are held at least once every five years and there are more than 20 registered political parties, the near total dominance of the ruling People's Action Party and its cadre of carefully screened and selected MPs provides little room for real opposition.

It is, in its critics' effectively, a one-party state and likely to remain so until the next elections, by the end of 1993, provides an unexpected upset.

With a growing economy, full employment and relatively harmonious race relations, there is little open evidence of discontent, although opposition figures claim there is much quiet grumbling - quiet because of fear of speaking out openly against the PAP. The PAP or its supporters are concerned about controls, rules and regulations and the Singaporean government's paternalistic attitude towards its citizens, but for the most part criticism is muted.

Mr Goh Chok Tong, who succeeded Mr Lee Kuan Yew as prime minister last November in a clockwork-like transition which epitomises Singaporean political efficiency. He knows the next elections and his government's performance at them, will be a crucial test for him and the PAP.

"My primary focus in the next two years is domestic politics. I want to win the next elections as prime minister. If I don't, that's right, it's not my fault," he says.

"I can only do so by showing

Lee Kuan Yew: was prime minister for 21 years

Singaporeans that I have made a difference to their lives, I've made their lives better."

Only at the ballot box will it be possible to see how successful his promised style of more "gentle" government has been.

Mr Goh has been some formidable challenges. Although his transitional term has been in place since the mid-1980s, he has inherited a party and political structure still largely controlled by Mr Lee Kuan Yew who, aside from being prime minister, led the PAP cabinet, remains secretary-general of the PAP. This is a party formed and moulded by an older generation of leaders steeped in the battles of the 1950s and 1960s against colo-

onialism and the threat of communism. Even today, with nism in throughout the region, PAP leaders still paint a picture of a precariously vulnerable Singapore, a Singapore which is "fighting for survival and trying to be a nation".

In the early days, Mr Goh Likens Singapore to "refugees on a small sampan". He has called it "a strong captain".

As a Singaporean, he is "more like perhaps a trawler or a boatman going at high speed. There's some room for the people to move around on board. At the same time, the captain can capsize if you don't control their movements because if there are fights on board, the boat can still capsize."

Such moves are largely dismissed by the Government's critics such as Mr Chiam See Tong, a member of the Singapore Democratic Party and the one elected opposition member

of parliament, who says that parliamentary debate still resembles a boring theatrical puppet show.

He argues the changes made so far are cosmetic rather than real.

Mr Goh said his new team recognise that most Singaporeans are increasingly concerned about travel and they are totally insulated from outside, often western, influences. He also appears to have taken on board that Singapore, chronically short of labour, must attract in those mostly well-qualified academics, professionals and others who vote with their feet each year and leave Singapore for new lives in Australia, Canada and elsewhere.

As a recent Singapore Straits Times investigation showed, the current political atmosphere. More fundamental political and social changes may therefore eventually be necessary. Singapore is however unlikely to become a western-style open democracy.

Other factors mitigate against any rapid change. As the prime minister acknowledges, the PAP, as a mass party is relatively small.

Nevertheless, in the last general elections in 1988 almost 40 per cent of the electorate did not vote for the PAP. Prime Minister Goh and others accept this was a protest vote to some extent by people who were unhappy with some of the government's more contentious decisions.

Although the swing against the PAP in the last elections was much smaller than the

Goh Chok Tong: faces a crucial test at the elections

11.6 per cent swing against the party in the 1984 elections, PAP leaders, including Mr Goh, recognise the slide in the popular vote. The PAP's popular vote was down below 55 per cent Mr Goh said in the Singaporean poll.

The PAP's general election produced a narrow victory over opposition MP in the island parliament, and two co-opted non-constituency members, both from the PAP. Mr Goh, Dr Lee Kuan Yew and Dr Lee Siew-Choh are disqualified from standing.

There is no real opposition in parliament, Mr Chiam, who has been elected as a member of the popular vote in each constituency, has contested, naturally, the PAP leadership which

his party's past electoral performances. In the next general elections he is hoping, probably, to win five or 10 seats.

That he says would give the opposition in parliament "a viable base." Mr Lee Siew-Choh is a fierce critic of the PAP.

The opposition is not really given a fighting chance. In Singapore, anyone who runs for the PAP is expected to be a member of the PAP government apparatus.

Such changes are needed by the PAP leadership which

argues instead that the opposition parties lack any real viable alternative programmes. "We don't think there will be a big role, for an opposition party," says Mr Goh. "The fact they want to be outside, they want to question the government, that's all right. That is their role. We allow it. We are not trying to eliminate them entirely."

Some believe a more vigorous opposition may one day emerge within the PAP. Suggestions of a potential split are played down by Mr Goh and other PAP stalwarts.

Even opposition MP Mr Chiam See Tong, however, there is unlikely to be a PAP split while Mr Lee Kuan Yew, still seen even by his most ardent critics as the "father of the nation" is "on the scene."

Mr Lee Kuan Yew retains a powerful political voice - a voice that could be enhanced should he decide to stand for the newly created post of elected president, something he has only ruled out for the first elections.

Asked whether the former prime minister is still pulling the real power strings Mr Goh replies: "No he is an influential figure. To say that he pulls the strings would be unfair to me and to my colleagues. But to say he is an influential figure in the team, I would not deny it."

He is also more than willing to tackle the potentially equally thorny question of his succession. He makes no secret of his desire to step aside after 10 years, and that Mr BG Lee Hsien Loong, the former prime minister's son and now first deputy prime minister is one obvious successor.

"We are already looking for them [the new team now] I am trying to prepare a team that can take Singapore into the next century."

Paul Taylor

■ FOREIGN POLICY: pragmatism born out of vulnerability to changes in world economy

## A series of overlapping relationships

FOR the small multi-racial island state of Singapore, foreign policy has inevitably been primarily determined by domestic economic and security considerations. It is wedged between the Muslim-dominated countries of Malaysia and Indonesia.

"We must make a living," says Mr George Yeo, minister of state for foreign affairs. "We must look after our security so that we can continue to make a living. I think our entire foreign policy turns on these two modalities. The smaller you

Singapore is, not about to let its guard down

are the more acutely you feel these two modalities."

Singapore's low key, pragmatic foreign policy stance, like many other important decisions, stems not only from the fact that in global terms Singapore's voice is still just a whisper in spite of the country's obvious wealth, but also from the widely held view among Singaporeans that they are fragile and vulnerable in both economic and strategic terms.

"Singapore's total trade is about three times the size of its gross national product,

which means we are very vulnerable to changes in world trade and world economic growth and we are particularly linked to the state of the US economy," says Mr Goh Chok Tong, the prime minister.

"Fragile in the sense that we are three different communities located on a very small island. So long as the economy is growing, there is plenty for everybody. I don't think people will fight over small things. But if the pie is shrinking, that will be the real test whether we are cohesive, solid or whether we are fragile," he says.

The prime minister has made it clear that his priorities over the next two years are domestic rather than foreign and that in the foreign policy arena in particular he will lean heavily on the advice of former prime minister Mr Lee Kuan Yew.

Singapore's former prime minister is the architect of much of the country's foreign policy, and while there may now be small changes they are unlikely to be radical. It was

Mr Lee who established close links with both Japan and China which eventually led to Singapore's relations with Peking last year - but typically only after Indonesia had moved first.

It was Mr Lee who, in spite of the receding communist threat in Indochina, insisted that Singapore should stand behind the Vietnam withdrawal from Cambodia and it was the former prime minister who, in what some have described as a parting gift delivered a water supply agreement with Malaysia late last year.

Mr Lee, a veteran analyst of the region, also saw the danger of a vacuum in the region should the US, which by Mr Yeo as the most benign superpower be, for domestic budgetary reasons, to withdraw from the region.

In November 1989, in the chevron of Malaysia in particular, signed an agreement with the US to allow greater

American use of Singapore's military facilities and in spite of some misgivings among some Japanese military build up, he encouraged Tokyo to "help strengthen the [US] pillar and not to build an alternative."

In fact, Singapore's foreign policy is based upon a series of

In the foreign policy arena the prime minister will lean heavily on the advice of Mr Lee Kuan Yew

overlapping relationships - "the more the better, rather than columns the safer our space," says Mr Yeo. "We are very close to the United States and Japan. They are old and crumbly, we leave them there."

As a small country Singapore is a fierce advocate of the upholding of international law, particularly by the UN. It sent a small contingent to the Namibia peace keeping force and a medical team to the Gulf. It is particularly it is simultaneously a member of the UN Security Council

Arrangement along with Malaysia, Australia, New Zealand and the UK. It is an increasingly active participant in the Association of South East Asian Nations (Asean) whose summit it will host, probably early next year.

The agenda, according to Prime Minister Goh, is likely

to focus on Asean's political future now that tensions in the region, particularly Indonesia, are easing.

However, Mr Lee Hsien Loong, first deputy prime minister and Mr Lee Kuan Yew's son notes: "One of the reasons Asean has been successful is that we do not try and cohabit close together, we are friends and we have generally the same views on issues that affect us... we work on areas where we can agree and where we see eye to eye, where there are disagreements or differences we just put

these aside for a moment."

Singapore has supported the fledgling Asia Pacific Economic Co-operation forum and, some suspect as much for political as economic reasons, Malaysia's proposal for an East Asian Economic Group.

Perhaps most significantly and in spite of some criticism that Singapore's foreign policy is still too reactive, it is gradually and very cautiously beginning to parlay its economic power into political influence, at least within the region.

Although Singapore generally resists giving aid, preferring instead to provide technical assistance and training, the so-called growth triangle concept, embracing Singapore, Malaysia's southern state of Johor and Indonesia's Riau Islands, with Singaporean determination, becoming a reality.

"Singapore is like the power house," says Prime Minister Goh, "and they are trying to plug into this power house in order to let the guard down. Singapore is like a power house in Batam and Johor."

Aside from eventually providing a separate source of

water for Singapore, the growth triangle concept will almost certainly bring about closer economic and political co-operation between the three nations.

So far, Singapore has signed a memorandum of understanding with Indonesia, although Johor is said to be keen to do the same. As Mr Lee Hsien Loong says, "eventually there will probably be a trilateral piece of paper but there is no great hurry."

In spite of occasional hiccups, relations between Singapore and its immediate neighbours "have never been as good as they are now," says Mr Yeo.

Singapore exists and prospers by being of use to others. Today there is considerably more economic co-operation and more joint defence exercises between Singapore and its neighbours, in spite of some lingering differences.

However, that does not mean that Singapore is content to let its guard down. Singapore, with its efficient and powerful, albeit small, military machine, has been lik-

ened to a brightly coloured poison puffer while Mr Goh has described the country as being like a porcupine. Neither is to be trifled with.

Either way the intention is to deter aggression through a combination of plugging the island state into as many multilateral agreements as possible (a small fish is safer swimming in a shoal), careful diplomacy, and as a last resort, by maintaining a well equipped and trained defence force.

"We must be prepared to explore multiple approaches for regional security which

There is far more economic co-operation

will accommodate big and small regional countries in a constructive framework that will minimise conflict and encourage dialogue, confidence and co-operation," Mr Wong, the foreign minister said in a recent Parliamentary session.

The long term security of the region, he said, was "best served by having an engagement of all powers, large and small, if necessary in overlapping and multiple security and political frameworks."

Paul Taylor

■ SHIPPING: port prospers from its strategic location

## Efficiency gives a keen edge

Singapore last year topped Hong Kong to become the world's largest container port

In the last 20 years has compelled the port to move in the direction of computerised automation. Computers now decide where containers should be stacked and in what order they should be loaded and unloaded.

This in turn has allowed the port to shed some 3,000 workers over the last decade, leaving a total of 7,115 workers last year. Most of those that remain are expected to be computer-literate even if their job is simply driving a crane. All are expected to undergo at least six days training a year.

To cope with what has become a serious shortage of capacity, the PSA is investing some \$8.1 billion in a new container terminal. The first berth should be ready by 1992 and, when the terminal is finished in 1996, the port's container handling capacity will have doubled to 10m TEUs.

So confident is Mr Goon of continued productivity growth, that he says this large expansion will be accompanied by only a slight increase in the labour force. It may not be possible to improve much on the speed of turnaround.

With a net surplus last year of some \$459m last year and over \$920m invested in fixed deposits in the bank, the money needed to pay for this investment is also scarcely a problem. Indeed, if anything, shareholders are more frequently raised at the way in which the PSA, like other utilities in Singapore and in spite of its heavy investment programme, has accumulated large cash reserves. "The disposition of this surplus may turn out to be a much bigger headache than growing the business."

Peter Montagnon

For over 40 years, Overseas Union Bank has been working with individuals and businesses throughout the Asia Pacific to help meet a wide range of banking and investment needs.

Headquartered in Singapore, we are connected internationally via offices in 14 countries and correspondents in almost every major city around the world.

Our team of experienced bankers can help you maximise business and investment opportunities.

Overseas Union Bank, together with its wholly-owned banking subsidiaries, International Bank of Singapore, Overseas Union Bank of Singapore (Overseas) and OUB Australia Ltd offer you a network of 50 offices worldwide in Singapore, Malaysia, Brunei, Jakarta, Manila, Hong Kong, Taipei, Tokyo, Seoul, Beijing, Shanghai, San Francisco, Los Angeles, New York, Toronto, London and others.

Correspondents in all the principal cities of the world.

LIKE Hong Kong, Singapore is blessed with a deep water harbour as its only significant natural asset. Unlike the British colony, however, it cannot rely on the aid of a large immediate neighbour such as China to help ensure that its port facilities thrive.

Singapore has thus been thrown back on its regional connections and strategic location on the main shipping routes between Europe, Japan and the rest of the Asia-Pacific region to develop a port which generates half its business offshore and claims to be a world cargo hub.

Singapore is not only the world's busiest port in terms of shipping tonnage handled, it also last year topped Hong Kong at the post to become the world's largest container port. Containers handled rose 20 per cent to 5.2m 20 ft equivalent units (TEUs) compared with 5.1m in Hong Kong. The story of the port is typical of Singapore's approach to economic development, right down to a present serious struggle with capacity limits. It owes its success to a classic local combination of government-mandated entrepreneurialism and investment in high technology that has brought about a keen edge in efficiency and productivity.

Through a public board responsible to the government, the Port of Singapore Authority (PSA), is expected to do without subsidies and pay its share of tax in the form of a 10 per cent levy on turnover and a further 20 per cent on operating profit. It is expected to finance its capital investment internally.

Thus it has been forced into an intensely commercial approach. The PSA markets itself actively around the world and prides itself on customer service. According to Mr Goon Kok Loon, deputy executive director, important selling points include predictability of berth availability and speed of turn round. Mr Goon says the average turnaround can now

be turned round in 10 hours. The port is not only an integral part of Singapore's concept of itself as a regional transport and communications hub, it helps underpin other service industries such as banking and brings in a wide range of ancillary business.

Thus demand for warehouse space has risen through Singapore's position as a designated delivery point for contracts written on the London Metals Exchange. It has become an accepted handover centre for ships which are sold in the second-hand market, and this has helped the ship surveying business, Mr Goon says.

Singapore enjoys a significant niche in ship repair and maintenance. In spite of high local wages, this sector has been buoyed up by the high

level of technology, which means repairs can be done quickly and in sophisticated ways.

It has thus managed to stay cost-effective in comparison with rival centres such as Hong Kong, and now, according to brokers Smith New Court, is looking to an increase in business maintaining tankers built in the active years of the early 1970s and which are coming up for special survey and repair.

By contrast Singaporeans play a less dominant role as shipowners. Though it is home to Neptune Orient Lines, which has a modern fleet and an aggressive expansion policy, the country's shipowners are reluctant to take on the risks of large fleet ownership, shipping ranks only 13th in the world.

The government has taken steps to boost this by extending local tax benefits to ships registered outside Singapore. Industry estimates say part of the aim is to encourage ship owners to transfer their business to help ship-management business, which is seen as an important ancillary service.

"Singapore has become a new option as a base for operations," says Mr Chung Chee Kit, executive director of Steamers Maritime. However, there has been no immediate rush to set up shop in Singapore and other executives say they are still uncertain about the impact of the move.

Back at the port, Mr Goon is unphased by Singapore's well-documented labour shortage. The large increase in volume

30 April 1991

THANKS largely to a strong stock market in the early part of last year, Singapore's financial services industry put in a spectacular performance in 1990, with a growth rate of 22 per cent making it the mainstay of the overall economy.

That performance is unlikely to be repeated in 1991, at least by the banking sector. The economy is growing more slowly; domestic loan demand is less robust; and the interest margins of domestic banks are narrowing as more surplus deposits are directed towards the interbank market.

All these factors are likely to temper the profits of domestic banks this year, but continuing strong activity in the foreign exchange market and buoyant regional loan activity means the financial sector should still be underpinned by a solid contribution from the offshore Asia currency banking market.

According to Mr Lee Ek Tieng, managing director of the Monetary Authority of Singapore, the growth rate posted by the financial services sector will still be in double digits. As far as the domestic banks are concerned, it is a forecast which masks a period of turbulence going beyond the merely cyclical.

It is generally admitted that Singapore's local market of

2.7m consumers is over banked with 23 full foreign banks, 14 restricted ones and 13 local banks. Bankers and stockbrokers say the authorities have begun to push the idea of rationalising the domestic banks with a view to creating institutions large enough to acquire international status.

Singapore banks need to follow their manufacturing clients who are investing overseas, says Mr Richard Hu, finance minister. "If they want to consolidate, we'll be happy. Size is an advantage, clearly."

"We are over banked," adds Mr Wee Cho Yaw, chairman of United Overseas Bank. "Even local banks have to go outside Singapore." UOB, which is Singapore's second largest bank, opened a joint-venture bank in Indonesia last year. Mr Wee says it would like to expand into Thailand and Taiwan. The details of this banking consolidation are still a matter of speculation, but the common belief in the financial community is that the so-called "big four" will eventually be reduced from four to no more than three.

One much-discussed possibility might be for the government-owned DBS Bank to absorb Overseas Union Bank, currently the smallest of the four. But the situation was

## BANKING SECTOR: a period of turbulence is expected

complicated last year by the acquisition of Asia Commercial Bank by Keppel, the state-linked group whose activities range from finance to ship repair. Keppel's entry into the market and its desire for more domestic banking services, they face limits both on the number of branches and automatic teller machines. This has restricted their access to the retail deposit market and forced them to find themselves on the more expensive inter-

bank market. They say they have also been hampered by their inability to join the debt cards fund transfer network.

Foreign bankers say they expect Singapore to remain under pressure to end this discrimination in the talks on liberalising trade in services in the Uruguay Round of the General Agreement on Tariffs and Trade. Now that they need to expand abroad, domestic banks have discovered that protection has come at a price. They

have neither the size nor the skills and efficiency to compete easily in the global market place.

The government last year raised the permitted foreign stake in local banks to 40 per cent from 20 per cent, a level which has since been reached only at OCBC Bank, which ranks number three of the big four. Now, it sees no need for further liberalisation.

One of the MAS's main concerns is to ensure sound banking in Singapore's small market. The domestic banks are required to be highly capitalised by international standards; the MAS is proud of its record as a regulator and vet would-be newcomers closely.

As a result the domestic industry has been first insulated from and then dwarfed by the large international players to whom Singapore plays host. In keeping with its wider policy of trying to be a service centre for multinationals, Singapore sees itself as primarily a provider of infrastructure and

related services to international banks rather than a player in its own right.

Much to the satisfaction of the MAS, activity in the offshore banking market has continued to grow space. Average daily turnover in foreign exchange last year was nearly \$800m, up 30 per cent on the 1989 level. Offshore banking assets rose 18 per cent to \$390m, and fund management business is growing as the region becomes more wealthy.

According to government figures, offshore loans to non-bank customers grew at a record 45 per cent, reflecting the rapid growth of the regional economy. Assets channelled into the interbank market grew much more slowly, at a rate of just 4.5 per cent.

The interbank slowdown was marked in the second half of the year as both Japanese and US banks reined in their international business. However, there are as yet no signs that this is spilling over into regional lending to non-banks which remains buoyant.

Insurance is an example of a domestic industry whose initial development was impeded by conditions on the local market.

The reason in this case was the stranglehold of the Central Provident Fund over the local

savings market. Private sector economists say this hampered the development of the life insurance industry in Singapore. The affluence of recent years has changed this and life insurance business began to grow rapidly, helping the private sector to develop new savings industry skills.

The MAS, which moved last year to subject insurance brokers to stricter regulations and capped their commissions, is keeping a strict regulatory eye on the industry.

The aim is to foster a sound reputation which will help attract large players in the regional business in Singapore. The authorities have long sought to complement the services offered by international banks with an offshore insurance market. A series of tax breaks is available on reinsurance and captive insurance business.

Offshore reinsurance premiums last year grew by 36 per cent to a total premium income of some \$480m, but captive insurance business declined by some 2.6 per cent. Today there are still only some 44 captive insurance companies active in Singapore, way short of the critical mass needed for this particular sector.

## PROPERTY

# Indicators that point all ways

THE pent-up demand caused by fears during the Gulf War crisis erupted in the case of The Waterside condominium project, with 100 eager home-buyers and speculators camping overnight outside the sales office.

Within nine hours, the more fortunate of the 400 people who turned up to buy the 160 apartments, had snapped up 98 per cent of the units worth up to \$81.1m.

Within days, some were being advertised at a 32 per cent mark-up. However, that scenario was not repeated for the office, retail, hotel and factory sectors. Only the supply of quality warehouse space has been tight in the past few years due to a lack of development.

Office rents rose 35 per cent in the first 8 months of 1990, stabilised, and then fell; retail

Rents of \$512 per sq ft have dipped to about \$38

rents along the main Orchard Road shopping belt diverged during the Gulf crisis before levelling off and pulling upwards and no one is building hotels.

In spite of The Waterside's success, property experts generally agree on several trends: rental periods will be of longer duration; rents and prices for all sectors are going down; and buildings are going to be decentralised.

Several crucial factors impact the property sector: the supply coming onstream, the projected slowdown in the economy, government plans to make landed property more affordable to Singaporeans while influencing market prices through land sales.

The Japanese are enlarging their impact on the property scene, while there is the Hong Kong factor to consider.

Residences will be more affordable when the government eases planning guidelines to make landed properties more affordable to Singaporeans by allowing smaller semi-detached houses to be built, new type terrace houses closer to the road, and bigger built-in areas for bungalows.

Meanwhile, property consultants Jones Lang Wootton forecasts 4,115 apartments and condominiums being marketed this year, and 4,553 more over the next two.

Forecasting a substantial increase in the supply of office space, landlords have been offering six-year leases instead of the traditional three years. This appeals to tenants, particularly multinational corporations used to longer-term agreements to help fix rentals and increases.

The office sector reached historical levels in rentals, values per sq foot and yields in 1990, notes Richard Ellis, property consultant. However, the Gulf War uncertainties and weakening economies of Singapore's trading partners caused rents to stabilise and capital values to drop about 10 per cent.

Rents of \$512 per sq ft have dipped to \$38, leading landlords to offer perks such as four-month rent holidays to woo tenants. There will also be more diversification in the quality, price and location of office space, predicts Richard Ellis, adding that the stock of private quality office space will almost double by 1994. There should be 12m sq ft available by 1995.

This is welcome news to Singapore. In January 1990, it was the 10th most costly city to be located in, in terms of commercial rents, points out

Mr Christopher Fossick, a Richard Ellis director.

Halfway through 1990, Singapore had risen to 6th place just behind Tokyo, London's West End, and Hong Kong, making it more expensive than Milan, Toronto and Los Angeles.

There were only three large commercial buildings opened in 1991, with 3.3m sq ft of office space available in 1991. There is also a long list of properties on sale.

The listed property companies mostly met analysts' forecasts of their rental and development income but some lost money on equities trading. To ease their debt burden incurred on acquiring property, the large companies such as City Development, DBS Land and Wing Tai Holdings are expected to make cash calls.

In spite of record tourist numbers to Singapore, retailers once too eager to jump on board the brand name bandwagon are faced with falling sales and increasing operating costs.

They had been banking on the purchasing power of Japanese tourists but, with the removal of commodity taxes on retail goods in Japan, including branded items, Japanese tourists are less keen to buy brand name items overseas, especially with a weaker yen.

Richard Ellis sees another trend emerging: regional shopping centres. As more women join the workforce, household incomes have more than doubled while leisure time has decreased.

Regional shopping centres have been established to meet the changing shopping needs of the increasingly cash-rich but busy consumers.

Decentralisation has also spread to other properties. Retail outlets can be found outside Orchard Road at Scotts or Beach Road; residential projects are being built outside the choice locations; offices are relocating in the Alexandra corridor and business parks; even the central bank is over-seeding the development of a 30-hectare hi-tech park for the financial sector at Tampines.

The tenants who are not dealing directly with the public and could include the stock exchange financial regulatory bodies and back-room services of banks.

Singapore wants to be a regional base for large financial houses such as Chemical Bank. "Like the UK and US, these parks allow multi-functions under one roof with operations such as research and development and light manufacturing," says Mr Fossick.

The added allure is a back-up power supply to ensure uninterrupted trading in case of a power failure.

The Japanese are concentrating only on what they consider prime properties. Having invested more than \$81m of real estate or 22 per cent of total investments in 1989, their share shrank to 17 per cent or \$844m in an overall smaller market in 1990.

Hong Kong-based buyers accounted for \$335.4m or 13 per cent of overall investments in 1989 and \$208m or 4 per cent last year. Some 200,000 - 300,000 sq ft of property was taken up by companies relocating from Hong Kong in 1990.

They are taking up more space, more time with what they would have taken up in the colony. There is no sense of panic in the republic as many people believe that rents and capital values will eventually reach reasonable values in the medium-term.

Joyce Quek

## SIMEX: faces tough choice over financial futures trading

# A revolution in the wings

CME chairman. If Simex opts to join Globex, CME still has a problem juggling its membership in both systems.

Simex is sanguine about Globex. "With technology, the whole trading system may be different - there could be a mix of automated trading and open outcry [where buyers and sellers trade in person with shouting and hand signals]. I don't think you could launch a new contract with automated trading," says Mr Francis Yeo, its chairman.

Of the four contracts under mutual offset, the CME says the Eurodollar interest contract has worked well, but not currency futures contracts in yen, D-Mark, and sterling. Mutual offset trades have dropped to 10,000 contracts a day, some 25 per cent of Simex's overall volume, against 35 per cent in early years.

Meanwhile, there are other worries such as trading volume falling for the first time since futures trading started in 1984. The 5.72m contracts recorded in 1990 was 5.5 per cent lower than 1989's 6.57m contracts, a victim of lower price volatility in the first half-year.

The falling volume was a global phenomenon, notes Mr Yeo, who points to a 9.1 per cent jump in the first quarter of 1991 of 1.4m contracts against 1.2m in 1990.

The lift in trading was due to extended trading hours from the end of January after the Gulf War bomb-

Trading floor of the Singapore International Monetary Exchange (Simex)

ing began. This move was made to capture the European business, one of Simex's targets, and it appears to have succeeded.

An extra 30 to 70 minutes of trading began on January 25 and March 2 raised trading volume by one-third. The increase came from contracts in Eurodollar and Euroyen interest rates and High Sulphur Fuel Oil (HSFO),

which account for some 87 per cent of Simex's volume.

Europe interests Simex because the market still has a lot of "paper" contracts and it will be the centre of more financial products with European demand. The exchange introduced a 3-month interest rate futures Eurodollar contract, its second in D-Mark, and identical to the one

offered by the London International Financial Futures Exchange.

On the plus side for Simex are an increase in its global share in trading volume. Its Eurodollar dollar futures accounts for 8.3 per cent of the world volume against 2.9 per cent in 1989, says Mr Yeo.

The exchange will introduce contracts to diversify and to compensate for its less popular products. Currency contracts did not do well. Simex's core products because of a very efficient cash market; the moribund gold contract stayed that way as the local London market was very efficient and quite entrenched; the Dubai crude contract did not take off due to fear of volatility and because liquidity had not been fully developed, particularly as it was the first cash-settled energy contract in Asia Pacific.

New contracts to augment its successful High Sulphur Fuel Oil contract are most likely in gas oil and Brent crude. In the pipeline are long-term interest rate contracts, 48-year bonds, US Treasury bonds, the longer-term, an Asian stock market index futures contract.

The local stockmarket index is a non-starter until all outstanding matters have been resolved. The main challenge to Simex will be the application of technology to futures trading which will change trading globally.

Globally, most exchanges are successful in domestic contracts but in Singapore's case, Simex had to take a quantum leap because the domestic market was small. However, it has the advantage of being an international financial centre, an Asian-dollar base, and the CME link-up.

## AEROSPACE: mixed forecasts for 1991

## Civil work increases thrust

MORE than 60 of the world's leading aerospace groups can be found in Singapore.

Companies such as France's Aerospatiale are competing alongside GE Aviation Services, Sunstrand, and United Technologies for a piece of the Asia-Pacific action, a market expected to provide the most business in the next 20 years. The industry in Singapore is projected to hit the \$2.5bn mark by 1995 after expanding 20 per cent to \$3.12bn last year. However, there are mixed forecasts for 1991.

The Economic Development Board, which garners investments for Singapore, attributed the 1990 performance (which does not include military production) of the aerospace

help it to register the high growth rates. Airbus should know - its new orders are entirely from Asia from clients such as Cathay Pacific and Malaysian Airlines.

It adds that, for the first time in history, Asia-Pacific airlines, not European or US carriers, will have enough clout to become the main thrust for a completely new commercial aircraft type, more likely to be wide-bodied and capable of carrying 600-800 passengers for long hauls.

Such forecasts could not have come at a better time for Singapore, which aspires to become a leading component centre for multinationals, a service support centre for American and European aerospace and aircraft-related companies and a leading manufacturing and business centre for aviation-related activities.

Less than 15 companies are certified by the Federal Aviation Authority to carry out third party Section 41 modifications. Two are from Singapore Airlines and Singapore Aerospace (SAS). Such work, one of the fastest-growing activities as more stringent safety requirements are set, is on the area from a jet's nose to the edge of the tubular section.

SAS has a competitive advantage over most rivals with its quality work (90 per cent of its 2,000 staff are skilled) and fast turnaround time of 31 days to carry out Section 41 repairs against Hong Kong-based Haeco's 38 days. The lack of hangars large enough to accommodate 747s prevents SAS accepting more orders. This is a problem that will be resolved by next year when a double bay hangar is completed. Turnover has risen 17 per cent above its projected \$220m for last year, lifting operating profit 33 per cent higher than 1989 to \$18.6m.

SAS agrees with an ICAO forecast that passenger traffic and cargo will rise in the Asia-Pacific region to outstrip Europe.

Singapore is too small a country to design, manufacture and sell its own aircraft but it does development work on prototypes. Using its skills honed

over the past 15 years, it has a 16 per cent stake in a \$800m tripartite venture to build and market a light five-seater helicopter for the Asia-Pacific region called the F120L.

Its partners are Aerospatiale (54 per cent) and the China National Aero-Technology Import & Export Corporation (Catic), with 30 per cent. New composite materials will be used for the body of the plane, seen as a successor to the Gazelle and Lama and complementing the Ecureuil.

The F120L prototype will be ready in 1993, with 1,500 to 1,800 units being produced over 10 years. SAS is involved in the conceptual phase, the making of the prototype, producing certain parts, and marketing.

## Its focus, following industry trends, is towards civilian work

while production will be carried out in China, which is expected to be one of the biggest markets with a shopping list for 200 helicopters.

SAS has long had a joint venture with Aerospatiale in Sembrano, which is responsible for its helicopters flying in Asia.

The company will continue its thrust into the commercial wide-bodied aircraft maintenance market with its new facility in Alabama, US, and joint ventures in the UK and Ireland.

Defence-related work, mostly from its mainstay, the republic's air force, will still be important, but SAS's increasing commercial activities (contributing 30 per cent of the business) is expected to fuel growth. Its customers include the US force, Kuwait Airways and the Nigerian Air Force.

Sembawang, another state-controlled company, is looking at aviation as the next core business to diversify from its main shipbuilding and repairing business so as not to have its earnings cycle dictated by the fortunes of primarily one industry.

Sembawang is in a joint venture with Catic, using its mar-

keting and sales capability to sell Chinese aircraft in the Asia-Pacific. Catic produces a competitive aircraft - the Y12, which was certified by the British Civil Aviation Authority. Sembawang's other aviation joint ventures are in Sembawang Hainan Airlines Tour and Aviation Services, and Harbin Aircraft Manufacturing.

## SINGAPORE ANNUAL REPORTS

OCBC Bank, one of the Big Four local banks in Singapore, offers a comprehensive range of banking and financial services. With total assets of US\$18 billion and total shareholders' funds of US\$1.4 billion, the bank achieved a profit of US\$129.4 million in 1990. Supported by an international network of 95 branches and offices, as well as over 400 correspondent banks, it is poised to build itself into a universal bank with a strong regional presence.

DBS BANK  
DBS Bank is Singapore's largest bank in terms of profits, assets and shareholders' funds. In 1990, it recorded consolidated net profits of US\$164.6 million, a 14.4% increase over 1989. Group assets excluding cortex reached US\$19.3 billion. As at end-1990, the Bank's capital adequacy ratio was about twice the minimum of 8% set for 1992 by the Bank for International Settlements. The Bank is now entering a new phase in its development, where the drive for international business will be pursued vigorously. Its mission for the 1990s is to build on its pre-eminent position in Singapore to be a leading bank in the Asia-Pacific.

## AIRTROPOLIS

## Airport lounge with designs on the future

IS Airtropolis an ambitious name for an airport? The much-lauded Singapore Changi International Airport, which has become a tourist spot, calls for something special.

Changi International has been named the world's best airport so many times that, in the month before the second terminal or T2 started operations last November, more than 100,000 people paid to tour the \$865m wonder.

"The word Airtropolis, with a futuristic feel, is one that connotes a very special and exciting place where things happen," explained Mr Lim Hock San, director-general of the Civil Aviation Authority of Singapore.

The two terminals offer the traveller so many services and facilities that a mini-city has emerged.

It is design, innovation, and state-of-the-art technology providing speed, efficiency and service to cater to the traveller's every need.

Its aim is to allow passengers to clear immigration, collect their baggage and pass

through customs in 20 minutes.

Those in transit can use the Changi Skytrain, the first high speed automated passenger transit system outside the US, which connects the two terminals and offers 100 shops, 75 dayrooms, 30 restaurants, business centre, and medical centre.

T2 has improved on its predecessor's attractions - from fitness centre, the first in an Asia-Pacific airport, to a multi-purpose hall, valet parking and air-conditioned taxi stand. The secret of Airtropolis is that it was designed with the family in mind. Bored youngsters can use the playroom or Science Discovery Corner while mothers relax at the beauty salons and fathers at the lounge.

Business executives can hold conferences or even meet local clients without leaving the terminal.

The main complaint about T2 is its size - it is too large, necessitating some walking. However, more space was incorporated into its design. Although it handles the same

number of passengers, T2 has 30 per cent more space, some baggage retrieval belts are longer to accommodate baggage from future larger aircraft - its gatehold rooms hold 500, not 300 passengers.

The ambience exudes the feeling of space with high ceilings, increased to filter daylight, and glass abounding where possible. Light, warm colours, omnipresent tropical plants and waterfalls banish the sterile, cold look of many airports. T2 was designed to comfortably cope with 10m passengers with Asia-Pacific's largest passenger handling capacity. It is built to 63 airlines flying to 111 cities in 53 countries.

In 1990 there was a 10.5 per cent growth in passengers to 15.6m, passenger handling capacity increased to 24m with the opening of T2, to 36m with T3 by the turn of the century and to 50m with T4.

Changi is not resting on its laurels. T1 will undergo a \$221m upgrading to match T2 and cope with a forecast 26m passengers in 1995.

■ **TOURISM:** in a good position to play the role of an usher

## An alliance of regional rivals

SINGAPORE is facing the challenges posed by some of its neighbours in the tourism industry in an unusual way.

It has developed a two-pronged response to the challenge of regional and global tourism. It aims to consolidate and further strengthen its own tourism product while playing its part to market the broader attractions of its Asian neighbours. The authorities believe this to be in the interests of the region.

The Singapore Tourist Promotion Board's (STPB) stance is that the true tourism competition comes not from its neighbours but from other regions of the world, particularly well-established tourist destinations.

### Singapore continues to develop its own tourism infrastructure and attractions

such as the Caribbean or the Mediterranean.

The mood in Asia being currently co-operative, the concept of marketing the

region as an alternative to the Caribbean or the Mediterranean has merit.

The appeal of Asean as a region is much greater than any single country. And yet, diversity is available in a compact geographical area where tourism infrastructure and of air access has improved immensely over the past five years.

So the city-state does not apply the traditional definition of competition to its neighbours. Instead, co-operation in developing the region's tourism potential is at the core of the STPB's tourism strategy - part of its marketing effort to assist visitors to Singapore to explore the attractions of neighbours Malaysia and Indonesia to further vary their experiences.

Together with its Asean neighbours, the republic is promoting the multi-faceted through the VIII Asian Year 1990 campaign.

Economic co-operation is evident in the Growth Triangle where multinationals in Singapore unwilling to upgrade and automate in the light of higher wages are steered to Johor,

	Arrivals		Room inventory	
		% change		% change
1984	2,981,430	4.8	18,440	13.8
1985	3,030,870	1.7	19,018	3.1
1986	3,191,028	5.3	22,020	16.1
1987	3,878,808	15.3	23,481	6.1
1988	4,188,081	13.6	24,888	5.8
1989	4,829,950	15.4	22,457	-9.0
1990	5,310,998	10.0	23,507	4.7

Source: Singapore Tourist Promotion Board

Malaysia, and the Riau Islands of Indonesia, which have lower land and labour costs.

Singapore benefits by offering its marketing, management and financial expertise. The idea of multilateral co-operation was mooted on the basis that Singapore prospers with, rather than at the expense of, its neighbours.

The republic is in an excellent position to play usher. Last year, visitors to Malaysia doubled from 3.7m in 1989 to 7m arrivals, of which 65 per cent came through Singapore.

The republic enjoyed a 20 per cent increase in earnings in 1990 to \$47.6m or 8 per cent of its gross domestic product.

Though he disagrees with the Caribbean comparison, Johor's chief minister, Mr Tan Sri Muhyiddin Yassin, expects more tourism for the Growth Triangle. He is assuming the opening up of a market in cash-rich visitors from Japan, Taiwan and South Korea on the back of their strong economies. Based on this assumption, the triangle partners are forecasting 22.5m visitors yielding some \$12bn in 1992.

The Asean Tourism Information Centre's preliminary 1990 report on the industry concluded that the region will continue to be its own best tourism market as the importance of intra-Asean travel grows

and the regional economies strengthen.

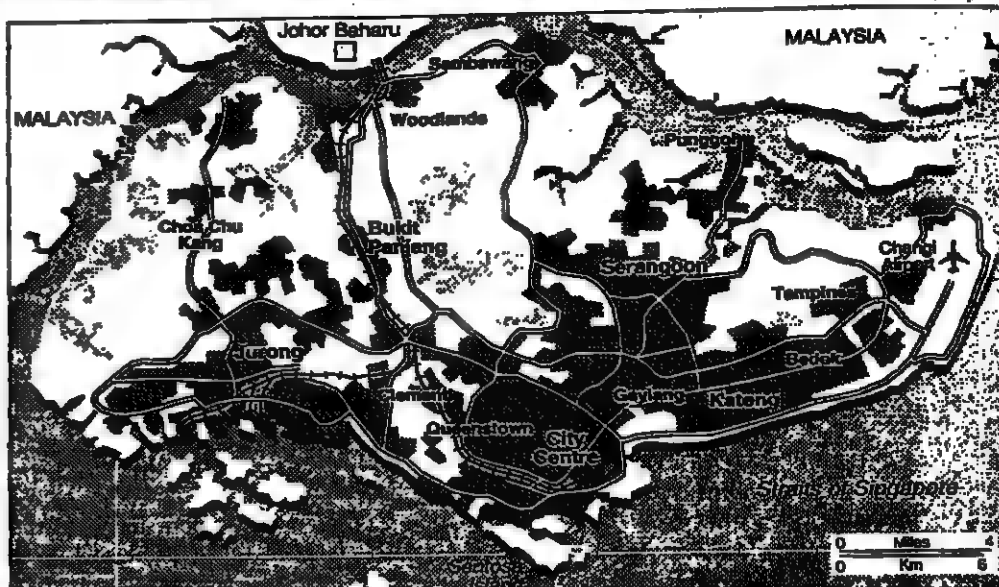

In 1989, the five Asean countries, excluding Brunei, earned \$10.2bn in tourism with 35.5 per cent of the 16.4m arrivals being intra-Asean travel. Asean nations experienced 15-30 per cent growth in arrivals in 1990, which recorded more than 17m visitors.

Singapore was not spared the sharp worldwide drop in tourist arrivals during the Gulf War.

Hotel occupancy rates sank as low as 30 per cent before recovering back to the 70 per cent levels. Special discounts are being offered for the next few months to attract local and foreign custom.

Even the finance minister, during his budget speech in March, gave some help to the hotels, restaurants and tourist-related shops adversely affected by the Gulf War's secondary effects. He reduced the tourism excise rate from 4 to 3 per cent for a year to tide them over their difficulties. The STPB expects the industry to pick up soon while others forecast recovery around the year-end.

Meanwhile, Singapore con-

times to invest in developing its own tourism infrastructure and attractions. The \$78m tourism development plan nearing fruition sees a new generation of tourism attractions coming onstream.

The heritage attractions include some of the island's old buildings restored to their former glory, such as Raffles Hotel, the Somerset Maugham and Alkaff Mansions, a grand gateway house on a hill formerly owned by a pioneer.

The conservation efforts, which also include Chinatown and Tanjong Pagar, have

played a prominent role as part of urban redevelopment plan in the late 1980s and 1990, the tourism industry having been

style bell, and the Underwater World at Sentosa, widen fun options.

At the infrastructural level, new resort hotels on Sentosa Island diversify the range of accommodations available in the Lion City. The completion of the Singapore International Convention and Exhibition Centre at Suntec City, a project sponsored by the Who's Who of Hong Kong's business moguls, adds to the industry's capabilities and underscores Singapore's position as Asia's leading convention city.

New theme parks such as Haw Par Villa's combination of high-tech heaven and Chinese-

## ■ COMMUNICATIONS: doubts about controls

# Services open up an undesirable world

NOTHING has struck home as vividly to some people in Singapore as the often-told tale of traders who sold US dollars immediately after watching on Cable News Network the faces of Mr James Baker, US Secretary of State and Mr Tariq Aziz, Iraq's then foreign minister, after failure to resolve the Gulf crisis. Singapore bankers and businessmen, on the other hand, bought US dollars and went left, "holding the baby", as one observer put it.

The difference in reactions was that the sellers could see and size up instantly what was happening based on real time information.

The difference from hearing of the event minutes later on the radio could mean millions of dollars lost.

This fact was noted by those promoting Singapore as a leading financial exchange and financial futures centre, one whose traders require up-to-date news.

The fast pace of technology is forcing Asian governments to re-think their control over what is seen by their populace. Most are wary of the unsettling effect of undesirable western influences portrayed on entertainment programmes and films.

However, control is becoming increasingly moot when technology can make receivers small enough to fit into a suitcase.

In deciding to open up to more instant and global communications, Singapore acknowledges that rapid advances in broadcast technology will force the examination of its policies on trans-boundary broadcasting and cable television.

The republic boasts many world firms in introducing the latest in telecommunications but is lagged in the areas of privately-installed satellite dishes, cable and global television. By contrast, satellite dishes are operating in Hong Kong, Indonesia, South Korea and the Philippines.

The acting minister for information and arts

(Mita) Mr George Yeo said: "One day it may not be possible for the government to regulate but, for as long as it is possible, let's have some controls in place."

The trade-off was that, for the controls to work, there had to be more choices for the public. Hence, the scheme to introduce two or three more ultra high frequency television channels within a year, later moving on to microwave and cable.

Many will be pay channels charged on a subscription basis to meet the needs of specific segments of the community. An arrangement may be negotiated with the BBC's World Service TV.

Mita's reckoning of 10 to 15 years before regulations against household satellite dishes become impractical is too long, argued outspoken government MP, Mr Lim Boon Keng.

He believes that global television must come soon because "if we aim to be a global city, it is to be soon or in 10 to 15 years' time".

In response to repeated lobbying by the financial community for access to CNN and other foreign news stations, the government will be issuing temporary licences of \$81,000 to financial institutions and government bodies to operate satellite television receive-only dishes to get live news broadcasts.

The republic has many world firms in telecommunications

All institutions, except hotels and households, can now apply for annual satellite dish licences from May 1. However, the strait-laced thinking persists in the barring of households in case "one day, someone were to put up a pornographic channel and all Singaporeans are able to receive it. Is it good or not good?" Mr Yeo explained.

However, it is a good enough to just get on-line real time market-sensitive information, there has to be an accompanying liberalisation of censorship of news and entertainment programmes.

The long awaited film classification system begins on July 1 with a restricted category barring viewers under 18 years old, and X-rated films that are banned. Censorship rules for publications and performances will be revised.

Mr Goh Chok Tong, prime minister, set up Mita to help inform, educate and entertain as part of Singapore's goal to make the republic a hub city of the world; and to build an economically dynamic, socially cohesive, and culturally vibrant society.

He wants to pay more attention to public and media relations to better explain public policies at home and abroad. This and the relaxation of censorship acknowledges the growing sophistication of a people who travelled widely and often enough to know what the West offers.

As for the communications infrastructure, the business-like nation has strived to make it easy for multinationals to do business in Singapore. "We have no natural resources. To make a living, we have to find a market for our goods and services. They have to be of quality and at competitive prices. To do that, we need a good communications infrastructure. Whether you are a manufacturer, trader or service dealer, you need good communication links to compete worldwide," said Mr Tan Goong Ching, permanent secretary at the communications ministry.

Singapore has invested heavily in its communications infrastructure and stressed excellent service. To maintain its advances in communications, it is building a third air terminal, reclaiming land for a fourth terminal and third runway; building a new container port at Pulau Brani; and participating in an Asean all-optical fibre cable network.

Singapore was the first to offer nationwide Integrated Services Digital Network (ISDN) where a Group 4 fax machines sends messages five

INSIDE

PepsiCo beats off a snack attack

A strong performance from PepsiCo, the world's second biggest drinks company, has helped it to beat its rivals in the first quarter. The rise was largely due to growth in the soft drinks and snack businesses, offsetting lower earnings from PepsiCo's food operations. Karen Zager reports. Page 24

Timberland

Timberland, the world's largest outdoor clothing company, has reported a strong first quarter. The company's sales rose 10% on a like-for-like basis, driven by growth in its footwear and apparel divisions. Bernard Simon reports. Page 24

Few American business leaders have been battered harder than the forestry industry over the past year. The time is now ripe for a major shake-up and it appears likely that a series of acquisitions, financial restructurings, mill closures and product-mix adjustments is on the cards. Bernard Simon reports. Page 24

Bundaberg hits at Tate bid

Bundaberg Sugar, Australia's third-largest sugar producer, yesterday fired another volley in its battle to fend off Tate & Lyle's hostile bid. Directors of the Australian group said the UK company's offer was pitched at a level that would leave the company following a valuation by Macquarie Bank. Page 25

Looking for signs of life

Lafarge Coppée, the largest cement and construction materials group in France, is looking for signs of recovery in its main North American and European markets. Despite a bright outlook for profitability - such as Spain - Lafarge also has to cope with difficulties in the cement and construction industries. George Graham reports. Page 22

Things hot up in the drought

Things have been rising in the drought-hit farmlands of England's south-east since the National Rivers Authority warned farmers that it might restrict irrigation in daylight hours in some cases until late in the afternoon. Page 22

Tight times for suits

It's been tough on the High Street as the clothing and menswear shops as 1,500 outlets closed in the last year. Mose Bros Group, the menswear retailer and hirer, saw its pre-tax profit tumble by 41.5 per cent, largely as a result of a fall in interest income and property profits. Turnover, however, advanced 7 per cent and its share price rose 1.5 per cent. Jane Fuller looks at the reasons behind the group's fall. Page 27

French store's stake triggers bid

By George Graham in Paris

THE COMPLEX interlocking family and shareholding structure of France's largest retail store sector appear to be on the point of being unravelled, triggering the prospect of a FF5.4bn (\$800m) bid for the Nouvelles Galeries group.

The acquisition takes Galeries Lafayette's overall stake to 39 per cent, past the 33.3 per cent level at which a full bid must normally be triggered under French law, but the company had hoped to be exempted from the obligation on the grounds that control of Nouvelles Galeries remains in the hands of the Devanlay textile group headed by Mr Léon Cligman, which has 47.5 per cent of the voting rights.

Galeries of FF950 a share, the price Galeries Lafayette paid for its 33.3 per cent stake, unless it can appeal successfully to the ruling.

The origins of this upheaval go back to the acquisition two and a half years ago of stakes in Galeries Lafayette, Nouvelles Galeries and Bazar du Hôtel de Ville (BHV) by Sir Ron Brierley, New Zealand investor.

This week's developments, however, provide belated recognition for his analysis that the sector was ripe for restructuring.

IBM warns on outlook for world computer business

By Martin Dickson in New York

INTERNATIONAL BUSINESS Machines, which earlier this month reported a 10 per cent drop in first-quarter earnings, said yesterday that it had not yet seen any sign of a market improvement.

The downturn in global business conditions by the world's largest computer manufacturer has led to expressions of doubt from companies in several leading US sectors about the strength of an economic recovery.

John Akers, IBM chairman, told the company's annual meeting that the war in the Gulf and economic problems worldwide had made the business environment increasingly difficult - not just in North America, but in Europe and Asia as well.

During the first quarter, turnover around the world had deferred decisions on buying and product installations.

The effects of this were fairly uniformly across IBM's product line and in the international markets. However, areas which suffered the most were the US and IBM's large

"How long this cautious approach by our customers will last is hard to tell," Mr Akers said. "Our operating rates will only improve when our customers' confidence about their business improves."

"We have seen no evidence yet to indicate any improvement in the near term, and consequently, the year remains uncertain," he added.

For the first quarter, IBM reported net earnings of \$500m, down from \$1bn earned in the same quarter of last year. Revenues were down 4.5 per cent at \$10.7bn.

The figures disappointed Wall Street, despite IBM's warning of a sharp drop. Analysts were particularly surprised at the sharp fall in its hardware sales.

Some analysts questioned whether this decline was temporary due to general economic conditions.

Yesterday Mr Akers said the future of the computing industry remained bright for those who managed their business well.

IBM must be prepared to take best advantage of the eventual economic improvement, Mr Akers said.

IBM shares rose 1 1/2 in morning trading on the New York Stock Exchange to stand at \$107 1/2 at lunchtime.

Marks and Spencer adopts a harsh diet

John Thornhill and Diane Summers look at reasons for the UK retailer's cutbacks

JUST one month into his tenure at the helm of Marks and Spencer, Mr Rick Greenbury has made it abundantly clear that a new regime reigns at Britain's best-known retailer.

Although the review of head office staff was begun six months ago under Mr David Sieff, the director of corporate affairs, few in the City of London were in the City yesterday about who was the driving force behind the changes.

Uncertainty about the economic climate has also had an effect on the company's staff. They are not so keen to take a chance by leaving to join other less solid companies.

A spokesman for M and S said yesterday: "We have had exceptionally low turnover in junior management over the last 18 months which has led to over-staffing and meant that we cannot progress these people through to a meaningful management position."

This low turnover had already forced the company to postpone the entry of 100 of the 150 graduate trainees it was due to take on this September.

It is not yet clear what other areas may be affected by the restructuring of M and S's business structure. But one possibility is a review of staff benefits.

Ever since the establishment of the company's welfare department in 1934, for example, M and S has set the gold standard in occupational healthcare.

The seventh floor of the Baker Street head office houses a gym, a dentist, doctors, nurses, an osteopath, physiotherapists and health administrators.

Breast and cervical screening are available to female staff and

from its financial prudence during the 1980s. It had retained the freeholds on most of its properties rather than indulge in the fashionable sale-and-leaseback schemes which enabled other companies to fund their great expansion drives.

A big investment in information technology - estimated at \$300m (\$507m) during the last three and a half years - has also enabled the company to increase its productivity levels and trim its cost structure.

Its total payroll costs as a percentage of sales - at 9.9 per cent - is second only to Argos in the retailing sector and way ahead of such competitors as Burton at 14.3 per cent and Boots at 15.1 per cent.

But despite these undoubted strengths, the company cannot expect to combat the general industrial trends indefinitely. As Joan D'Olier, retailing analyst at County NatWest, says: "Although M and S is well-placed

Marks and Spencer: determined to keep control of costs

also to wives of male employees. Even ex-employees may, some years after they have ceased to work for the company, be entitled to follow-up healthcare.

Exhibitions, videos, health literature form part of the extensive preventative programme, a video and leaflet, for example, on testicular self-examination were designed to make sure male employees did not feel excluded.

Most of this provision is an act of faith. When asked why the company spends so lavishly on the health of its employees, managers reply that it "feels right" to do so.

There is no doubt that occupational healthcare of such a high standard cuts down on absenteeism and increases productivity. But there is unlikely to be much

hard financial evidence of this within the organisation, due to the long-term nature of the provision. At least some pruning of healthcare would, therefore, not be unexpected.

The same could be the case for other staff benefits, where a trend away from paternalism is already in evidence: hairdressing and chiropody, for example, are less popular perks than they once were, particularly among younger staff.

"To a certain extent, M and S has always been carrying a lot of fat and it is the first time that it has gone on a diet," says Mr Henson of Warburg Securities. The new dietary regime may be overdue, but under Mr Greenbury's direction, it seems likely to prove a rigorous one.

Siemens plans to take over Texas Instruments unit

By Andrew Fisher in Frankfurt

SIEMENS, the German electrical and electronics group, is to acquire the industrial controls subsidiary of Texas Instruments, the US electronics company.

The German group, which is headed by chairman Mr Karlheinz Kaske, says the takeover would enhance its automation technology activities, in which it claims to be one of the world's leaders.

concentrated mainly in western Europe, the US, and Japan.

The German company has about 20 per cent of this market, equivalent to a turnover of around DM1.5bn. Among its subsidiaries are Allen-Bradley of the US, Fanuc of Japan, and Germany's AEG.

The Texas Instruments subsidiary employs 900 people in the US at its Johnson City, Tennessee, plant and 300 elsewhere in the US and abroad. No turnover figure was given, but analysts said revenues of the unit were around \$120m.

After the transaction, Siemens will continue to sell both companies' products in parallel. Texas said it was also considering the sale of its process automation business.

Neither side would give a price for the deal with Siemens, but

## Etam rebuffs renewed bid from South African group

By Jane Fuller in London

THE FAMILY that controls one of South Africa's largest women's fashion chains has taken the first public step towards a possible bid for Etam, the UK fashion chain.

Oceana Investment Corporation, a vehicle for the Lewis family which owns the 700-store Foschini chain in South Africa, has made a tender offer of up to 22.3m (£37.68m) for 18.5 per cent of Etam's shares. This would take its stake to 25.1 per cent.

The maximum price offered is 185p per share, putting a market value of £121m on Etam. This compares with £114.3m at yesterday's closing price of 179p, up 15p.

Mr Michael Lewis, a director of Oceana and Foschini, said Oceana was considering making an offer for the whole of Etam. It did not want to make a hostile bid and the tender offer was a way of gauging shareholder response.

Etam responded angrily to the move, describing it as "an attempt to gain back-door control at an unacceptably low price". The board had already rebuffed a cash and shares takeover proposal, worth about 150p a share, from Oceana.

Over the past four years Etam has invested £78m to increase floor space by 60 per cent. It has added the Snob teenage fashion and Peter Brown menswear shops to its portfolio as well as expanding the established Etam and Tammy Girl chains. Turnover has increased by more than 80 per cent to £206.5m.

But the 1990-91 results announced last week showed a 51 per cent fall in profit to £8.5m from £17.5m, which compares with the record £17.5m set in 1987-88. The figure was the worst since 1983-84. However, after a first-half loss of £1.1m, Mr Howard said the management had proved its ability by effecting a dramatic second-half recovery in adverse market conditions.

The offer for up to 12.1m shares in Etam is being made by Campbell Lutyens Hudson, the investment bank on behalf of Oceana Retail Holdings, set up for the purpose. The closing date is May 7 and the striking price will depend on the number of shares subscribed. Oceana is seeking a minimum additional stake of 5 per cent.

## Management buy-out offer at British leisure group

By Philip Rawstone in London

MANAGEMENT at Brent Walker, the heavily-borrowed leisure group, yesterday offered to buy out the company's borrowing operations and several pubs.

Mr Alistair Arkley, managing director of Brent Walker Brewing and Trading, said it was hoped that "the company will view favourably this offer against other options which it is understood to be considering".

Allied-Lyons, the food and drink group, said last week it had been discussing a possible deal with Brent Walker. One suggestion was that Allied could agree to supply Brent Walker's 1,122 pubs, putting extra revenue through its own six breweries.

Such a move might involve the closure of Brent Walker's Cameron's brewery in Hartlepool, which employs 400. Union representatives from the brewery yesterday delivered to the company a petition against such a move, signed by 26,000 Hartlepool residents.

Cameron's main beer brand, Strongarm, is sold mainly through pubs, grocers, and off-licences in the Teesside area.

Mr Arkley said yesterday his buy-out team, which includes the division's finance, production and commercial directors and is being advised by accountants, Price Waterhouse, had secured support from several banks and institutions.

An "indicative offer" had been made to Brent Walker for the brewery and several pubs in the locality.

Brent Walker, which is due to publish its 1990 accounts next month, is working with its bankers on a restructuring of liabilities. The leisure group must raise cash and prune operations to service its £1.4bn (£1.36bn) debt.

There have been reports that some bankers are pressing Brent Walker to sell the William Hill betting shops chain. The group still owes Grand Metropolitan, the UK drinks, food and retailing group, £50m of the £615m purchase price.

Allied-Lyons' results, Page 22

## Looking for something to build on

Lafarge Coppée seeks to cement its future, writes George Graham

Watching the economy for signs of an upturn can be hard enough at any time, but with weather fluctuations and the Gulf crisis disturbing the signals, the task becomes even more unsettling.

"I would love to have a clear model to hang on to," says Mr Bertrand Collomb, chairman of Lafarge Coppée, the largest French cement and construction materials group.

For 1990, the impact was clear enough. The recession in North America, especially in Canada, made a dent in Lafarge's earnings. Lafarge Corporation, the group's US offshoot, suffered an 8 per cent drop in operating profits, with net profits stable at FF2.19bn (\$360m) thanks to higher exceptional and s tax charges.

Europe, on the other hand - especially Lafarge's domestic market in France - showed only a slight downturn. In Spain, Lafarge's Asland subsidiary, acquired in 1989, continued to produce strong profits despite a flattening of the cement market and an increase in competition from imports.

Mr Collomb does not expect much of a pick-up in business in North America before the end of the year, although he notes significant regional variations.

Florida, he is now a disastrous market for cement, as bad as Ontario was last year, whereas the Great Lakes have resisted the recession better and Texas is now recovering.

More disconcerting, however, were Lafarge's difficulties in two other markets which are expanding rapidly: plasterboard and biotechnologies.

In plasterboard, where the group ranks second in Europe with a 25 per cent market share since it teamed up last year with Redland of the UK, overcapacity has led to price-cutting wars. Operating profits in this sector halved last year to FF186m.

"It is clear prices are at levels where no-one earns any money, but we consider that we are among the most competitive," he says.

Over the long term, Lafarge expects the plasterboard market to show annual growth of 5 per cent. For the immediate future, Mr Collomb draws encouragement from a recent price rise introduced in the UK by BFB, the market leader, but still expects 1991 to be a difficult year.

Lafarge's bio-technologies division, meanwhile, sank back to an operating loss of FF65m last year, after profits of FF212m in 1989. Buffeted by

Bertrand Collomb: plans to develop seeds sector

the decline in the dollar, the lysine business, making animal feedstuffs, saw prices plunge by 30 per cent, although Mr Collomb says demand is still strong for products like monosodium glutamate, and the soda division showed a slight improvement.

This division is the one which financial analysts have always had the most difficulty in reconciling with Lafarge's core businesses in the construction materials sector, but Mr Collomb appears ready to persevere with this diversification.

Seeds, however, are one sector where Lafarge is rethinking its position. Mr Collomb plans to continue developing its vegetable and flower seed sector, but he is now seeking a partner in the cereal seeds business to enable the group to take better advantage of the research it has put in.

For 1991, Mr Collomb denies adopting a defensive posture, although he admits to a prudent approach. He plans to continue exploiting the reserves of profitability in the company. Lafarge has acquired over the last two years - which he says are already making a positive contribution to earnings after financing costs - by bringing productivity up to the group's normal levels, and to maintain industrial investments.

The overall investment budget will be restricted to what Lafarge can cover with its own cashflow, or around FF75bn, but the acquisitions budget will be retained in after the FF12bn spending spree of the last two years, although there could still be room for acquisitions up to around FF2.5bn, perhaps in Lafarge's developing paints and special building materials division.

"We are expecting a miraculous economic upturn, but we are not going into hibernation," Mr Collomb says.

## Christiania Bank suffers loss

By Karen Mill in Oslo

CHRISTIANIA, Norway's second biggest bank, yesterday unveiled a first-quarter net loss of Nkr279m (\$40.9m), compared with a net profit of Nkr280m in the same period last year.

The setback stemmed mainly from lower net interest income, which fell to Nkr724m from Nkr883m, and higher loan loss provisions, which more than doubled to Nkr610m from Nkr267m in the quarter of 1990.

Group operating profit, before credit losses, fell to Nkr351m in the quarter from Nkr546m.

Mr Sverre Walter Rostoft, president, admitted the result is weak but said that the bank had started 1991 better than it had ended 1990.

One bright spot was an increase in non-interest income which rose Nkr496m from Nkr468m last year, mainly due to an increase to Nkr108m in gains on foreign exchange trading from Nkr68m last year.

Profits on securities trading rose slightly to Nkr110m from Nkr107m.

Costs rose to Nkr897m in the quarter from Nkr878m last year, mainly due to restructuring. The bank forecasted that 1991 will be less than in 1990 when they reached Nkr935m.

Mr Rostoft said the bank's old headquarters is for sale which could produce a profit of up to Nkr400m.

## Banco Hispano sells stake

By Peter Bruce in Madrid

BANCO HISPANO Americano, one of Spain's large commercial banks, has taken a further step towards protecting itself from unfriendly takeovers with the agreed purchase of 2.76 per cent of its capital by the Mexican group, Banifera, which has interests in industry and retailing.

Banco Hispano also recently announced that it hoped to conclude an asset swap with Banco di Roma later this year, which would result in each bank holding some 5 per cent of the other.

## Novo Nordisk rights issue

By Xueling Lin in Copenhagen

NOVO Nordisk, the Danish pharmaceutical company specialising in insulin production and diabetic care, plans a Dkr1.5bn (\$223m) rights issue.

At the annual general meeting on April 24, the board won agreement to increase share capital by up to a total of nominal Dkr190m in one or more stages, distributed proportionally between A and B shares.

The ceiling on increases in share capital in connection with acquisitions was raised from nominal Dkr80m to Dkr100m.

The company said group sales for 1990 rose by 10 per cent to Dkr8bn while pre-tax earnings grew by 8 per cent to Dkr1.1bn. Insulin sales grew 19 per cent and the company reported significant market share gains in key areas such as the US and Japan.

Results for the first quarter of this year, which are due in mid-May, are forecast to follow this favourable trend and based on this the company has opted for a pre-emptive rights issue.

In the short term it expects investment needs to be substantial.

## Philips to take over east German lamp maker

By Ronald van de Krol in Amsterdam

PHILIPS of the Netherlands, the world's biggest lighting manufacturer, is to take over Narva Lamp Factory, a maker of vehicle and other types of specialty lamps in eastern Germany.

The Dutch company declined to say how much it will pay for the company but it said that it will be making substantial investments in modernising the factory over the next few years.

Narva Lamp, located in Plauen, has annual sales DM40m (\$22.6m). The company exports a large part of its output to other parts of Europe, where they tend to be sold in shops which cater for the lower end of the price range.

Philips will retain the Narva name for the factory's internal lighting products. Philips and Germany's Tishman, the handling of privatisation of German industry, Narva's workforce will number 500 when Philips assumes formal control on May 1.

## French insurer turns in annual profits up 23%

By George Graham in Paris

AXA, the French insurance group, has reported a 23 per cent rise in net profits last year to FF3.35bn (\$560m).

The group, including the former Compagnie du Midi but not the Normandy mutual companies which are its ultimate owners, said insurance premium income rose by 9 per cent to FF38.4bn, with gross revenue from banking and financial services rising 25 per cent to FF7.1bn.

Direct earnings from AXA's insurance activity dropped, while the group benefited from capital gains on the sales of some of the substantial industrial stakes held by the former Midi, including Brasseilles at Glacière International, the African brewing group, and Garonor, the huge

transport depot north of Paris.

Mr Claude Béar, AXA's chairman, is still looking at a number of possible acquisitions in the US insurance market after the collapse last year of his proposed \$4.5bn takeover of Farmers Group, which lapsed when Sir James Goldsmith's Hoylake consortium failed in its bid for Farmers' parent, BAT Industries.

State-controlled Banca Commerciale Italiana expects net profit to grow by around five per cent in 1991, slower than last year's 10 per cent, Baster reports from Milan.

Mr Sergio Siglienti, the president, told the annual meeting that the cost of financing new investments would slow profits this year.

All of these securities have been sold. This announcement appears as a matter of record.

## INTERNATIONAL COMPANIES AND FINANCE

## Axe falls on N American forestry

A big shake-up looms in the battered industry, writes Bernard Simon

The harsh bite of recession, plus far-reaching changes in the market for wood products, are creating the need for a big shake-up in the North American forestry industry.

A spate of acquisitions, mergers, financial restructurings, mill closures, and production adjustments are among the likely outcomes as US and Canadian companies, some of them heavily burdened with debt, ponder their response to the unexpectedly severe downturn.

In a typical comment, Mr. Amik Wahman of M.J. Whiteman & Co., a New York securities firm, said: "You've seen some, and you're going to see some unwinding."

For several other than real estate, have been battered harder than the forestry industry over the past year. Its biggest customers - the publishing and construction industries - are the ones that are the most likely to be squeezed victims of the business slowdown.

With the sole exception of Kimberly-Clark, the tissue maker which is as much a consumer products company as a forestry one, the industry has suffered steep declines in quarterly earnings. Several are down in the red (see table).

The \$7m loss posted by Georgia-Pacific, the biggest producer, would have been \$50m were it not for the sale of containerboard and corrugated packaging divisions.

Mr. Gary Palmer, analyst at Oppenheimer and Co., estimates that the shares of forestry companies are now at their biggest discount to book value - over 50 per cent on average - in more than 30 years.

No improvement is likely in the second quarter. Mr. Andrew

Source: Company Reports, Research Associates, Riva, Houston

Slater, chairman of Connecticut-based Champion International, sums up the industry's mood with: "The second quarter looks tough, and beyond that it's too soon to tell."

The recession has shaken through the forestry industry like a line of falling dominoes, hitting one product after another. Newsprint was the first, followed by lumber, pulp and, most recently, uncoated white papers. The slump in white papers largely explains Boise Cascade's slide to a \$16.8m first-quarter loss.

The outlook for coated papers is also clouded by overcapacity. Offshore markets, one of the first quarter's few bright spots, will be threatened if the US dollar sustains its recent advances.

Whiting demand is pushing down prices for most products. According to the Canadian Pulp and Paper Association, the US consumed 10 per cent less newsprint in the first two months of this year than during the same period in 1990. A 5.5 per cent price hike which

was supposed to take effect on January 1 has been quietly abandoned. Discounts are the order of the day.

Equally worrying is the industry's growing capacity, caused partly by a recession but also by the start-up of pulp and paper mills conceived during the heady days of the late 1980s. Mr. Palmer estimates, for instance, that US newsprint capacity will grow by almost 5 per cent this year and another 1.8 per cent in 1992.

Meanwhile, the cost of building new mills, modernizing old ones, and of acquisitions has swollen the industry's debt. Georgia-Pacific's long-term debt more than doubled to \$5.2bn last year following its purchase of Great Northern Newsprint.

Stone Container of Chicago, which is widely regarded as one of the weakest companies in the US industry, has \$3.9bn in debt maturing this year, and another \$471m in 1992.

An example of the highly-leveraged new projects is the Ponderay newsprint mill

Washington state, jointly owned by Canadian Pacific Forest Products and various US publishing companies. More than two thirds of the mill's \$350m cost was financed by debt. Cash flow from the project is earmarked for debt repayment until a target debt-to-equity ratio is reached.

Although the industry's fortunes are bound to improve when the economy picks up, producers also face wrenching structural changes.

Those once regarded as more than weeds are increasingly being used in timber products, pulp, and some grades of paper. Producers of high-quality timber from the north-west US and western Canada, battling to remain competitive, are moving as fast as possible away from "commodity" grades to value-added building materials and manufactured paper products.

Environmental pressures are also forcing changes. The growing use of recycled paper is eroding demand for virgin timber. Stricter forest conservation rules threaten to shrink the amount of timber available for cutting, while pushing up transport and logging costs.

Some companies have started to face reality. Weyerhaeuser has sold assets worth \$400m in the past two years, including a hardwood factory and a beauty side centre. Abitibi-Price, the biggest Canadian newsprint producer, will soon shut down one of its mills.

Some are dividing the industry's players into the strong and the weak. The latter group, which includes Stone, Boise Cascade and most of the Canadian companies, are likely to undergo the most radical surgery during the looming shake-up.

## Israel is advised to break bank sale contract

By Judy Maltz in Jerusalem

ISRAEL'S attorney general has advised the government not to sell the Israel Discount Bank group back to its original owner, Mr. Raphael Recanat, because of charges against him for his role in a share price scandal.

The IDB group was the first Israeli bank put up for sale by the government, which hopes to divest itself of its majority shareholding in the country's four leading commercial banks.

The government acquired control of the bank in 1988, when it bailed them out of a share crisis that threatened to topple the banking system. The Recanat family submitted the only bid for IDB.

The attorney general's recommendation is likely to slow down the bank sale process in Israel. The treasury had hoped to finance at least part of the heavy costs of absorbing an influx of Soviet immigrants this year by selling off its assets. It had assumed that at least two big banks would be sold by the end of the year.

In a legal opinion addressed to the finance minister and the central bank governor, the attorney general, Mr. Joseph Harish, stressed that "essential public needs" justified breaking a contract signed by the government and the Recanat family over the sale of IDB.

The opinion noted that the charges pending against Mr. Recanat were especially severe since they related specifically to the areas of banking and securities which, by nature, are based on special relations of trust with the public.

Mr. Harish's legal opinion endorsed the view of Bank of Israel governor Mr. Michael Bruno, who several months ago urged the government to suspend negotiations with the Recanat family until the court had ruled on the case.

A ministerial economics committee, headed by finance minister Yitzhak Mordechai, then rejected the governor's recommendation, on the grounds that it would mean violating the contract signed with Mr. Recanat.

In his legal opinion, Mr. Harish said that although the Recanat family had previously owned the bank, it still needed a permit from the Bank of Israel to purchase the bank. The attorney general recommended that the central bank not grant him this permit.

## Bührmann-Tetterode

## General Meeting of Shareholders

Shareholders and holders of certificates of shares in Bührmann-Tetterode N.V. are invited to attend the Annual General Meeting of Shareholders to be held on Tuesday, May 7, 1991 at 10:30 a.m. in the Okura Hotel, Ferdinand Bolstraat 333, in Amsterdam.

In Amsterdam:  
Algemene Bank Nederland N.V.,  
Amsterdam-Rotterdam Bank N.V.,  
Bank Mees & Hope N.V.,  
NMB Postbank Groep N.V.

In the UK:  
National Westminster Bank PLC,  
Stock Office Services,  
Station Way, Crawley.

The agenda, as well as the Annual Accounts and the Annual Report are available for examination by shareholders and holders of certificates at the offices of the company, Paalbergweg 2, Amsterdam South-East, and at the National Westminster Bank PLC, Stock Office Services, Station Way in Crawley.

Registered shareholders should inform the company (P.O. Box 4021, 1009 AA Amsterdam) in writing, and no later than May 3, 1991, of their intention to attend this meeting; their notification should also list the numbers of their shares.

Holders of certificates of shares who wish to attend the Annual Meeting must deposit their registration papers no later than May 3, 1991, at the indicated offices of one of the following banks:

The Board of Supervisory Directors

Amsterdam, April 30, 1991

## Polish group confident of 1991 results

By Christopher Robinson in Warsaw

UNIVERSAL, a Polish foreign trade company privatised last year, has reported an after tax profit of 25.9bn zlotys (\$22m) for 1990 of which 58 per cent is to be paid to shareholders as a dividend of 8,000 zlotys per share.

The opening price of the shares when the company was privatised last summer was 30,000 zlotys and the current share price is 38,000 zlotys.

The share sale raised some 280bn zlotys. The company plans to spend 115bn zlotys this year on purchases of state sector food processing plants, a metal works, and on property and retail trade investments. Mr. Dariusz Przywilewski, the managing director, said he was "confident" about this year's results.

Mr. Wieslaw Panter, the managing director at the Erono glass works has resigned after trading in the company's shares was suspended during last week's session on Warsaw's new stock exchange. The stipulation came when the number of potential sellers exceeded buyers by over 5 to 1 and the company's share price was fixed at 54,000 zlotys or 10 per cent below the previous week's price to await the next session taking place today.

Business Centres of the US has set up a joint venture with the Warsaw central district authority to put up a new office building in the city.

## Firestone in Argentine tax row

By John Barham in Buenos Aires

THE ARGENTINE subsidiary of Firestone, the Japanese-owned tyre company, has threatened to close down if the government forces a demand for an estimated US\$80m-\$100m in back taxes.

Several other subsidiaries of multinational companies also face heavy tax demands. Among them is British American Tobacco and Perkins.

However, Firestone, headed by Mr. Manuel Balbis, who is also president of Argentina's American Chamber of Commerce, has taken the most aggressive stance towards the DGI, Argentina's tax department. He said: "Our net worth is about \$2m. There is no way we can pay the kind of money they are asking for."

The dispute began in 1988, when companies bought and sold government tax rebates on an apparently legal secondary market. The companies now being pressed for payment paid their taxes with rebates bought from Koner-Salgado, an Argentine conglomerate.

A DGI investigation in 1989 found evidence of fraud in Koner-Salgado's tax rebates. It subsequently rejected payments made with its certificates.

However, Mr. Balbis claims the DGI's findings were not made public until 1990, when Firestone ceased buying from Koner-Salgado.

The case has come to a head since a firm deadline for payment expired last week. The Supreme Court ruled that companies must pay first before negotiating with the DGI.

Growing interest in Argentina by foreign investors could be undermined unless a satisfactory compromise can be found.

Mr. Domingo Cavallo, economy minister, said: "We are prepared to discuss [anything] within the law." He added, however, that "it is not within the powers of the DGI to collect [taxes] that the law requires it to collect."

However, a diplomat monitoring the case said the government would try to put off the problem until its finances were in better shape.

## PT Inco hit by lower deliveries

PT INTERNATIONAL Nickel Indonesia (PT Inco), which was floated on the Jakarta stock exchange in April last year, saw first-quarter earnings fall by half, from US\$18.6m, or 4 cents a share, to \$9.6m, or 2 cents, writes Kenneth Goding, Mining Correspondent.

Lower nickel deliveries, down from 17.7m to 14.9m lbs, as the company was recovering from a boiler explosion which cut output, and higher production costs were only partly offset by higher realised nickel prices.

PT Inco, 88 per cent owned by Inco Canada, realised \$9.02 a lb for the nickel in the quarter, against \$2.74 last time.

## Singapore press group up 30% against trend

By Joyce Quek in Singapore

SINGAPORE Press Holdings (SPH) succeeded in lifting both profits and turnover in the first half, reversing the downward trend set by many publishing and newspaper groups worldwide.

Group turnover for the half-year to February of S\$274.5m (US\$167.2m) was 8.5 per cent higher, while group pre-tax profits jumped 30 per cent to S\$10.6m from \$8.6m.

The improvement came on the back of higher advertising revenues in the first quarter, rationalisation of group operations and cost containment, and lower depreciation charges.

Although investment income of S\$8.4m was posted at the February 1990 level, provisions for a reduction in the value of investments of S\$1.1m last time turned into a writeback of S\$3.2m this half-year. This was due to higher market values.

A writback of similar provisions for long-term investments boosted extraordinary profits by S\$5.4m. This was part of a S\$12.5m provision made for SPH's 5 per cent stake in The South China Morning Post acquired from Mr. Rupert Murdoch.

The move helped offset further losses incurred by an associated company, amounting to S\$2.6m.

Group attributable profits were consequently lifted 6.4 per cent, from S\$57.3m to S\$60.9m in February, while earnings per share rose from 26.3 to 31.3 cents.

The directors forecast that, with the end of the Gulf war, operating results for the second half year are expected to remain satisfactory.

The group's performance was in line with the forecasts of analysts, who expect advertising revenue to increase as the local economy picks up.

An interim dividend of 5 cents per share was declared.

## Advertising decline hurts publishers

By Robert Gibbons in Montreal

CANADA'S longest post-war recession and a drastic decline in advertising continue to take a heavy toll on the country's two largest newspaper publishing groups.

Southern, with 17 dailies, suffered a first-quarter loss of C\$13.4m (US\$11.5m), or 23 cents a share, against a profit of C\$14.7m, or 26 cents, a year earlier. Revenues of C\$412m, against C\$432m.

There is speculation of further staff cuts and possibly asset sales. The group includes Commercial Printing and a large bookstore chain.

Torstar publishes Canada's largest daily, the Toronto Star, and operates Harcourt Books. It earned C\$6.1m, or 16 cents a share, down from C\$20.9m, or 54 cents. Revenues were C\$121m against C\$125m.

Torstar owns 23 per cent of Southern's common shares and Southern 80 per cent of Torstar's non-voting stock.

## WANKIE COLLIERY COMPANY LIMITED

FINANCIAL RESULTS FOR THE YEAR ENDED 28TH FEBRUARY 1991 AND DECLARATION OF DIVIDENDS

The audited results for the year ended 28 February, 1991 with comparative figures for the previous year are as follows:

	1991	1990
SALES		
tonnes	4,785,193	4,499,491
tonnes	154,774	167,101
	\$000	\$000
Sales Value (F.O.R.)	185,348	144,208
Net profit for the year	35,759	20,140
Less Taxation	—	—
Net profit after taxation	35,759	20,140
Extraordinary item	—	9,476
Profit after extraordinary item	35,759	10,664
Retained Profit brought forward	775	813
	36,534	11,477
Appropriations		
To Capital Reserve	8,940	2,666
To General Reserve	20,000	8,036
	28,940	10,702
To dividends		
Interim Paid	2,393	—
Final Proposed	4,785	—
	7,178	—
Retained profit carried forward	416	775
Earnings per share		
Cents	75.0	42.0

The calculation of earnings per share is based on the profit of \$35,759,000 (1990 - \$20,140,000) and the weighted average of 47,852,677 shares (1990 - 47,852,677 shares) in issue during the year. For purposes of calculating the number of shares, effect has been given to the special rights attached to the "A" ordinary shares.

No tax is payable as the company has an assessable loss.

WCC coal sales were 145,146 tonnes or 5.7% above the previous year. HPS coal sales were 140,536 tonnes or 7.1% above the previous year. Whilst this is an improvement, total HPS sales were down by 173,606 tonnes or 10.3%.

Coke sales amounted to 154,774 tonnes were 12,327 tonnes or 7.3% below the previous year. Although the coke oven battery continued to operate at the minimum with operating capacity, the company's stocks have increased due to the static local demand for coke and the stiff competition being experienced in the external markets due to high transport costs.

The Chairman's review together with the Annual Report and accounts for the year ended 28 February, 1991 will be posted to members on or about 30 May, 1991 and the Annual General Meeting will be held on 5 July, 1991.

**FINAL DIVIDENDS**

At a meeting of the board of directors held on 26 April, 1991 it was resolved that final dividends number 124 of 10 cents per share payable on the ordinary shares and number 9 of 13.33 cents per share payable on the "A" ordinary shares be and are hereby declared in respect of the year ended 28 February, 1991. These dividends will amount to \$4,785,000.

The dividends are payable in Zimbabwe currency on or about 7 June, 1991 to shareholders registered in the books of the company on 17 May, 1991. The transfer registers will be closed from 18 May, 1991 to 24 May, 1991 inclusive.

Withholding tax will be deducted from dividends payable. Remittability to external shareholders is subject to Exchange Control approval.

By order of the Board. E.R. Monteiro Secretary

Harare 26 April, 1991

## INTERNATIONAL COMPANIES AND FINANCE

## PepsiCo turns in 13% rise despite snacks setback

By Karen Zagor in New York

PEPSICO, the world's biggest soft drinks company, yesterday turned in a 13 per cent rise in first-quarter net earnings with strong growth in its soft drinks and restaurants businesses offsetting lower results from its snack foods operations.

The figures were at the low end of expectations and shares in PepsiCo fell \$1 to \$31.44 at midday yesterday.

For the three months to March 23, PepsiCo recorded net income of \$205.4m or 25 cents a share, against \$181.9m or 23 cents a year earlier. Sales advanced 12 per cent to \$4.12bn from \$3.68bn.

Pre-tax profits in the first three months of 1991 rose 15 per cent to \$316m from \$274m a year earlier.

PepsiCo's soft drinks business suffered from the loss of the Burger King account and volume in the latest quarter fell 1 per cent.

Sales, however, rose 7 per cent to \$1.4bn and operating profits for the period

increased 8 per cent to \$161.1m. Operating profits from PepsiCo's international soft drinks business surged 45 per cent to \$17.7m on sales which climbed 35 per cent to \$344.6m.

Growth was more modest for PepsiCo's domestic soft drinks operations, where operating profits fell 1 per cent to \$143.4m on sales of \$1.06bn.

PepsiCo's three restaurant chains - Pizza Hut, Kentucky Fried Chicken and Taco Bell - recorded earnings of \$119.2m, up 35 per cent from the previous year, on a 11 per cent increase in sales to \$1.52bn. PepsiCo said the results were driven by the exceptional performance of its US business.

Operating profits from PepsiCo's snack foods fell 4 per cent in the first quarter to \$175.4m on sales which rose 16 per cent to \$1.22bn.

The company attributed the decline to increased promotional spending and a shift into more competitive product categories.

## NCR enlarges board to keep its chief executive

By Nikkai Tani in New York

NCR, the Ohio-based computer manufacturer, engaged in a multi-billion dollar battle with American Telephone & Telegraph (AT&T), has moved to enlarge its board, thus allowing its chief executive, Mr Charles Erley, to remain on it.

In March, NCR shareholders voted in an AT&T motion which sought to replace Mr Erley, together with three other NCR directors, by four AT&T representatives on the board.

As a result, Mr Erley and his three fellow directors were due to leave the board tomorrow when four AT&T nominees would take their places.

However, the NCR board decided at a meeting on Sunday

that it would increase the size of the company's board to 14. It would reappoint Mr Erley to one of the new vacancies, while Mr Gilbert Williamson, NCR's president, would fill the other. Mr Erley would continue as chairman of the board, NCR said.

There was no immediate response from AT&T, and it declined to say whether it had been warned of the changes. After further talks at the weekend, both companies said they were making progress towards an agreed deal, although AT&T yesterday described the state of play as "difficult".

AT&T offered to increase its bid price to \$110 a share earlier this month, but only in an all-paper deal.

## Arco posts decline in line with expectations

By Karen Zagor

ATLANTIC Richfield (Arco), the Los Angeles-based oil and gas company, yesterday posted a decline in underlying first-quarter earnings, in line with its earlier predictions.

Arco's 1990 results were distorted by a \$22m gain from a change in accounting methods and \$23m after-tax charges relating to environmental clean-up costs and tax provisions.

Including these one-time items, Arco's net income for the first three months of 1991 dropped 41 per cent to \$351m or \$2.17 a share from \$582m or \$3.56 a year earlier.

Mr Lodewick Cook, chairman, said the first-quarter results reflected unexpected low natural gas prices, lower average crude oil prices and lower margins and volume for chemical operations. These more than offset stronger refining results and higher crude oil and natural gas output levels.

Arco's worldwide oil and gas exploration and production operations earned \$261m after

tax, down 19 per cent from \$318m a year ago. Refining and marketing earned \$74m against \$72m.

Arco's average price for domestic crude oil slid 8 per cent to \$12.11 a barrel, compared with \$14.72 a year earlier. Average domestic gas prices fell 12 per cent to \$1.08 per thousand cubic feet from \$1.29.

First quarter after-tax earnings from Arco's 83.4 per cent interest in Arco Chemical dropped to \$32m from \$71m.

The results included a \$9m pre-tax charge related to a shutdown of an Arco Chemical plant in Texas.

National Intergroup has signed a definitive agreement to sell its Permian oil distribution subsidiary to Ashland Oil for about \$75m in cash and 2.2m Ashland common shares, Bender reports. It said Ashland would also assume about \$32m in debt and Permian would forgive about \$14m in debt owed it by National Intergroup.

## LTV hit by downturn in cars and appliances

By Martin Dickson in New York

LTV, the third largest US steel group, yesterday reported a first-quarter net loss of \$46.3m, which it blamed on a slump in demand for cars and household appliances.

LTV, which has been operating under the protection of the US bankruptcy courts since 1986, is the latest in a succession of US steel manufacturers to report first-quarter losses stemming from its North American economic downturn.

The net loss, on sales of \$1.1bn, compared with income of \$4.1m on sales of \$1.46bn last year. The loss per share was 48 cents, against 78 cents a year earlier.

LTV's steel operations reported a first-quarter operating loss of \$46.3m, before restructuring charges, against operating income of \$4.1m in the first quarter of 1990.

Shipments declined by 356,000 tons, due to lower demand for cold-rolled sheets, hot-rolled sheets and galvanized products.

In February the group reached a preliminary agreement on settlement of a long-running pensions liability battle. The deal should eventually pave the way for it to emerge from bankruptcy proceedings.

LTV said yesterday it intended to file a preliminary plan of reorganization by May 5. It stressed that negotiations on many key issues would be needed before its creditors could agree on a package.

## Cominco faces big write-down on smelter snags

By Robert Gibbons in Montreal

COMINCO, the mining and metals group, continues to encounter problems with its zinc-lead smelting operations at Trail, British Columbia, and may write down one-third of the C\$145m (US\$125m) value of its new lead processing unit.

The German-designed lead smelter, an important environmental advance, was started-up at the end of 1989 but rapidly ran into operating problems. The unit had to be brought back into production after extensive repairs but the new unit then had to be shut down completely for major modification.

In the first quarter, Cominco posted a net loss of C\$10.2m, or 14 cents a share, against a profit of C\$17.1m, or 20 cents, a year earlier, on sales of C\$273m, against C\$309m. The first two quarters are normally the worst for the group since it ships concentrates from its two Arctic mines only in the second half.

Mr Robert Halbaner, Cominco president, says the group will make a profit for all 1991 if base metals and fertilizer prices stay at current levels.

He added that it will probably be known by the end of May what modification has to be made to the smelter.

Teck, the Vancouver-based mining group which effectively controls Cominco, reported first-quarter profits of C\$11m, or 14 cents a share, down 54 per cent from a year earlier, on revenues of C\$104m, down nearly 14 per cent. Besides the Cominco loss, Teck had lower production and prices for its gold.

## US legal eagles may clip Schneider's wings

Barbara Durr on the challenge for Square D

The takeover battle being waged by Groupe Schneider of France for Square D of Illinois is about to enter a critical phase. During the next two weeks, two key legal decisions will be made that could spell the French company's plans.

At hearings on May 9 and May 12, Judge Leonard Sand, of the US District Court for the Southern District of New York, is scheduled to decide whether there are grounds to Square D's allegations that a takeover by Schneider would violate American anti-trust laws.

Square D has asked for preliminary injunctions against Schneider to halt its proxy solicitation and tender offer of \$78 per share or \$1.9m. Both Schneider and Square D make electrical equipment.

If Judge Sand were to find in favour of Square D, Schneider would find it difficult to resolve the legal challenge in time for the US company's annual meeting on May 24, when proxy votes will be cast for the board of directors.

A simple majority would win the proxy fight and allow Schneider to replace the current board. The replacement Schneider-affiliated board could then clear the way for the takeover.

The board would have to remove the company's poison pill provision and waive Square D's obligation under the law of the state of Delaware, which requires that the

shareholders acquire 85 per cent of the company's shares. This done, Schneider could then purchase the shares tendered to it.

At the last count, on April 12, Schneider said that some 78 per cent of Square D's shares had been tendered to it. While falling short of the 85 per cent requirement, Schneider's chances of obtaining at least a simple majority of proxies would appear to be rather good.

Square D has spurred anti-trust reviews of Schneider's bid in the US, Canada, Britain, and Italy, according to a letter from Square D chairman, Mr Pierre Pinaud-Valencia.

Square D's US anti-trust allegations rest principally on one point. It charges that Schneider's state of non-residence for the board, submission in February, violates the provision of American law regarding interlocking directorates.

The state contains directors, officers and consultants of Schneider and its affiliates.

While Schneider has argued there is no merit to these legal challenges, it submitted an alternative state of board candidates in early April. While these nominees apparently would not violate US laws on interlocking directorates, it was received too late to qualify under company by-laws, Square D says.

The deadline for board of director's nominations was at the end of February, which is

when Schneider sent in its original list.

Besides trying to thwart Schneider's takeover by legal means, Square D has been pursuing other options. It was reported last week to have sought \$1bn in financing for a leveraged recapitalisation.

Although the company would not comment on its intentions, the loans could be used to pay shareholders a special dividend. This could at least cover the tender offer's price and thus convince shareholders to stay on board with the current management.

A Square D's financing proposal to banks was reported last week. Mr Pinaud-Valencia offered to raise the tender offer's price to \$80 a share, but the banks would come quietly to the table. But relations between the two chairmen are now so embittered that even a sweeter deal is considered unlikely to be persuasive.

Analysts believed the original Schneider offer of \$78 was a lowball. This is partly because they feel Square D, while weathering a difficult economic period relatively well, has not lived up to its own assessments of success.

After a possible price increase from Schneider last week, the market boosted Square D shares to \$81.25, a premium over the tender price. They closed last week slightly down from that peak, at \$80.15.

## Control Data advances smartly on one-off gain

By Louise Kehoe in San Francisco

CONTROL DATA, the US computer manufacturer, reported stronger than expected first-quarter results, boosted by a one-time restructuring gain.

The company warned, however, that it did not expect to be able to maintain this pace of recovery.

First-quarter net earnings were \$7m, or 16 cents per share, compared with \$6.8m, or 16 cents, in the same period last year. Revenues fell to \$406.6m from \$421.6m in the first quarter of 1990.

First-quarter earnings per share from operations were 8 cents per share, compared with 5 cents per share in 1990.

Revenues in the 1990 period included contributions from several operations that have since been sold or discontinued.

"We are pleased with Control Data's operating progress in the first quarter, but mindful that revenues from ongoing businesses were essen-

tially flat and lower than anticipated as a result of the difficult economy," said Mr Lawrence Perlman, president and chief executive.

"Given the uncertain economic conditions that exist worldwide, particularly as they affect the computer industry, we do not expect the company's operations to sustain the pace of improvement recorded in the first quarter. However, we remain optimistic that Control Data can achieve better results in 1991 than it did in 1990."

In 1990, Control Data reported earnings of \$2.7m, or 6 cents per share, on revenues of \$1.69bn.

Net earnings in the 1991 first quarter include a net pre-tax restructuring gain of \$5.6m.

The gain resulted in part from the sale of an equity stake in Permatex Technology, but was balanced by restructuring charges of \$40.5m.

## UK COMPANY NEWS

## Moss Bros trimmed 42% at £2.4m

By Jane Fuller

MOSS BROS Group, the menswear retailer and hirer, saw pre-tax profit for the 12 months to January 26 fall by 42 per cent to £2.38m after a sharp reversal in interest income and property profits.

The comparative figure of £4.05m for the year to January 27 1990 had been helped by an exceptional profit of £210,000 on the sale of a central London property.

A £2m tax payment on a 1988 property sale - of a Covent Garden site which netted £21m - helped interest received during the year to £785,000 (£1.6m).

Mr Rowland Gee, managing director, said those two factors accounted for about £1.8m of the £1.7m fall in pre-tax profit. Operating profit declined by 11 per cent to £1.68m (£1.88m).

Turnover advanced by 7 per cent to £54.76m (£51.11m). The company opened a net five stores, bringing the total to 52 covering 150,000 (140,000) sq ft.

Mr Gee said a further 10,000 sq ft of planned expansion was shelved until conditions improved.

He claimed the company's share of the men's suit

Roland Gee expansion shelved until conditions improve

market had risen from 5 to 6.5 per cent as 1,500 menswear shops had closed during the year.

Most of the expansion had come from the Suit Co shops, in the mainstream division, where sales rose by just over

19 per cent to £22.2m (£18.6m).

The more up-market Savoy Tailors Guild chain - the classic division - grew to about £17m (£16.1m).

Mr Gee said it had been affected by what Austin Reed described last week as the

white-collar recession in the south-east of England.

Cecil Gee, the fashion division and the only one of the three chains not to include a suit hire service, inched ahead to £13.7m (£13.5m).

Costs had, however, been hit by rent reviews where Mr Gee said the Next expansion of the late 1980s had pushed up the "rental evidence".

Another adverse factor was the uniform business rate, where increases had often been 30 per cent.

Payroll costs had been controlled, partly because they were sales and profit related. "Staff will accept a reduction in numbers more readily if they are paid on commission," he said.

Net cash held on January 26 amounted to £5m (£14m). Capital spending had fallen to £3.8m (£5m) and would be down again this year.

Earnings per share fell to 9.45p, compared with 16.35p including property profit and £1.1p without it.

The final dividend is held at 3.5p to give an unchanged total of 5p.

The Moss and Gee families hold 49 per cent of the equity.

## Corporate side buoys Wensum

By Michio Nakamoto

THE RESILIENCE of its corporate clothing business helped Wensum, the clothing company, report a 17 per cent rise, from £235,000 to £274,000, in annual pre-tax profits.

The improvement for the year to January 26 1991 came on turnover of £2.95m (£2.55m) which included a 33 per cent sales increase in its corporate wear division.

This side of the business was not subject to the same degree of slowdown seen on the retail side, said Mr Andrew Hughes, chairman.

Operating profit in the corporate clothing business was up to £472,000 (£311,000). Although deemed satisfactory, results for the clothing side were not as buoyant. Turnover was up by 9 per cent to £5.38m and operating profit by 7 per cent to £450,000 (£415,000).

Gearing was reduced from 28 per cent to 13 per cent.

Earnings per share rose 13 per cent to 6.62p (5.85p) and a final dividend of 2.35p is recommended, making a total of 3.6p. The company was floated in July 1989.

## Warringtons shares suspended pending finance statement

By Clare Pearson

SHARES IN Warringtons were suspended at 174p yesterday morning pending clarification of the commercial property company's financial position.

Alfred McAlpine, the construction group which last week announced a 1-for-2 rights issue and which owns 87 per cent of Warringtons' ordinary shares, immediately said that it had made full provision against investment in its 1990 accounts.

Warringtons' announcement comes some two months after it had first revealed it was attempting to refinance its business. Executives of the company were not available for comment yesterday.

In February's statement, Warringtons said the marked decline in the UK property market together with high interest rates had had a considerable effect both on the capital value of its developments and its ability to dispose of them.

In its 1990 accounts, McAlpine made a £20m below-the-line provision against its investment in the company. The shares were obtained

when it injected its property activities into Warringtons in June 1988. Later it also acquired £2.5m worth of preference shares in the company.

Warringtons has not reported results since June last year, when it announced a 28 per cent rise, from £1.03m to £1.3m, in pre-tax profits for the half year to March 31.

The shares, down from 68p in April last year, hit a low of 7p on the statement two months ago.

The company expanded rapidly into property development

and away from contracting after new management led by Mr Graham Jackson, chairman and chief executive, took over early in 1987.

As at September 1989, before it expanded further partly by acquiring more properties from McAlpine, net assets per share stood at 100p. Shareholders' funds then totalled £38m. The company had £26.13m worth of secured short-term bank loans and overdrafts, and some £2m worth of long-term bank and mortgage loans. Midland is its principal banker.

## Mayflower back in black

THE Mayflower Corporation, which disposed of its Tri-ang toy interests last September, yesterday reported a swing from losses of £1.1m to profits of £449,000 pre-tax for 1990.

Profits were achieved in the second half. At the year-end all group companies were trading profitably. The 12 months totalled £13.77m (£16.2m) - the

group has interests in manufacturing, marketing, life assurance and pensions.

The results benefited from lower interest charges of £205,000 (£420,000) and exceptional income of £102,000 (provisions £747,000).

Earnings worked through at 1.56p (losses 6.45p). Extraordinary charges of £1.85m (£296,000) related mainly to the disposal of Tri-ang Leisure.

We've made things more reliable, efficient and productive.  
And that includes our company.

Today, around the world, Honeywell Control Technology is helping make homes more comfortable, industry more productive, aircraft more efficient, and buildings more energy-wise.

And, as we continue to improve the world around us, we continue to improve ourselves.

Which is why we've left computers behind. Reduced our dependency on defence to about

10% of sales. And given the Controls business our undivided attention.

We're already the world leader in Controls. And with this renewed and total focus, we're able to offer a better balance of solid, stable, less cyclical businesses. Businesses that capitalise on global demand and will, as the world industrializes, continue to grow.

And our increased attention to shareholders assures you of our commitment.

So when people depend on you, depend on Honeywell.

For more information, write to Honeywell Investor Relations, Honeywell Plaza, Minneapolis, Minnesota 55408, USA or call 0101-612-870-2121 (fax 0101-612-870-3875).

Helping You Control Your World

## UK COMPANY NEWS

## Bundaberg Sugar attacks value of Tate &amp; Lyle bid

By Kevin Brown in Sydney

**DIRECTORS OF Bundaberg Sugar, Australia's third largest raw sugar producer, claimed yesterday that Tate & Lyle's hostile takeover bid was pitched at least 44 Australian cents a share too low.**

In the defence document, they said Bundaberg's shares had been valued by Macquarie Bank at between \$4.54 and \$5.16, valuing the company at \$455m (£185m) and \$402m.

Tate's offer - recently increased from \$4.37 to \$4.41 per share - values Bundaberg at \$432m.

Macquarie said it was inappropriate to value a commodity stock like Bundaberg on the basis of a weak point in the commodity price cycle, and claimed Tate had undervalued the strategic advantage it would gain from Bundaberg's milling and refining capacity.

The bank's report concluded that the implied value being offered for Bundaberg's core milling and refining businesses was less than the prices paid in comparable international acquisitions in the sweeteners industry, and in Australian agricultural and food industry takeovers.

In particular, Macquarie said the offer was not in line with prices paid by CSR, the Australian sugar and building materials group, for Pioneer Sugar in 1987, and by Tate & Lyle for Redpath and Amstar in the US.

Mr Roy Diecke, Bundaberg chairman, said shareholders should reject Tate's offer because it undervalued the company and was an opportunistic attempt to take advantage of the weakness of the world sugar market.

He said Tate had not given shareholders "the whole story" in its offer document, and claimed Tate had quoted sugar prices selectively to play down Bundaberg's performance over the last decade.

"The profitability of the company will follow the sugar price cycle, but the company has progressed through difficult times in the past," Mr Diecke said.

Mr Geoff Mitchell, managing director, said Bundaberg had outperformed the Consumer Prices Index and the Australia's 50 most traded shares since its formation in 1972.

Mr Paul Keating, the federal treasurer (finance minister) signed an order yesterday giving the Foreign Investment Review Board another 90 days to decide whether to approve Tate's bid if it is accepted by shareholders.

The bid has prompted strong local opposition in Queensland, where Bundaberg is based, but neither the federal government nor its board has any indication of their likely response.

Bundaberg's shares closed at \$3.85 on the Australian Stock Exchange yesterday. The shares were \$3.52 immediately before Tate launched its bid.

## Deceleration at Bletchley Motor

Increased interest charges of \$1.43m, against \$1m, pushed pre-tax profits at Bletchley Motor Group, the car parts and accessories firm, down by 12 per cent to \$223,000 for 1990. Turnover was ahead 17 per cent at \$1.75bn (75p) total.

## Boosting the spirits of a shaken giant

Philip Rawstone examines measures being taken to rebuild confidence in the £4bn Allied-Lyons group

**ALLIED-LYONS, the UK drinks and food group, has discovered that six months can be a long time in business as well as in politics.**

Last October, brewing industry analysts were bailing the emergence of a more active management style and the prospect of accelerating growth from the group's array of spirit brands, pub property, and food.

The £150m foreign exchange loss is expected to reduce pre-tax profits for the year ended February 28 1991 by 15 per cent to \$478m. Group debt - nearly \$1.5bn - will be reduced by less than forecast. Gearing, which had been expected to come down from 90 per cent to 60 per cent is likely to remain about 70 per cent.

That may impose some constraints this year, but most analysts are predicting a strong resumption of growth, with pre-tax profits in 1991-92 rising to \$500m.

Allied has suffered to some extent from the market focus on its traditional brewing operations during the past five years as one of the world's leading spirits companies.

It was a shaky bid from Elders, now Foster's Brewing, which triggered Allied's acquisition in 1986 of the Canadian spirits business, Hiram Walker, and put it on the international map.

The group then consolidated its position with the \$150m purchase of Whitebread's spirits operations in late 1989.

More than half the group's profits now come from its spirits divisions - "and this is the major attraction of Allied's shares," says Mr John Wakely, analyst at Shearson Lehman.

It has taken time to bed down its acquisitions but

management is now tightly focused on markets, distribution - including a joint venture with Suntory, the Japanese drinks giant, and realising brand potential as consumers worldwide drink less but drink better.

Ballantine's, its top-selling Scotch whisky, has achieved rapid growth in Europe and Japan and makes an estimated profit of \$22m a year.

Courvoisier last year recorded a bigger sales growth than any other cognac. Kabina, one of the world's best-selling liqueurs, made \$10m in profit. Canadian Club is the third-largest Canadian whisky brand. Beehive, the traditional gin brand, is also doing well.

The international brands are as good as those of Guinness, says Mr Wakely. "And eventually, Allied is going to be as much as Guinness does. I believe they will be contributing 60 per cent of the group's profits by the end of the year."

Within the UK, however, it is still a brewing business that seems to command more attention.

The group is widely regarded - by Mr Peter Lilley, secretary for industry, among others - as having been slow to react to the changes being forced upon the industry by the Monopolies and Mergers Commission.

Uncertainty persists about its intention to remain in both brewing and pub retailing.

It has held abortive talks with Whitebread about a merger of their brewing businesses. Rumours are rife about its interest in acquiring both breweries and pubs from Brent Walker. It has tried to

many well-sited pubs whose potential is being developed with a shift towards food and premium drinks.

Brewing and pub retailing contributes about 30 per cent of Allied's profits.

The Lyons food business, which contributes 17 per cent of group profits, has tended to be dismissed because its focus on "core markets" such as tea.

But the operations were subjected to an intensive strategic review in 1989 and have been reorganised under Mr Tony Hales, now one of the front-runners for the post-of-chief executive. Allied disposed of its UK cereals and US frozen food businesses, and has focused on four pillars: franchising, beverages, bakery and ingredients.

Its franchising activities include Baskin Robbins, the world's leading ice cream store operation, and Dunkin' Donuts, the US doughnut chain which it acquired 18 months ago for \$150m.

Tate provides 75 per cent of the profits of the beverages sector. Tateley is a £100m grocery brand in the UK, which makes it bigger than Kellogg's corn flakes or Heinz baked beans. Market share is increasing following the introduction of round tea bags in mid-1989.

Here, as in its other operations, there is evidence that Allied was developing, if sometimes slowly, a sound sense of direction and purpose before the unexpected shock of the foreign exchange losses.

If management can recover its poise, the potential remains to be unlocked and the progress of recent years resumed.

## COMPANY NEWS IN BRIEF

**CENTURY OILS:** Offer from Fuchs (UK) declared unconditional and remains open until further notice.

**CLARKSON (HORACE)** is acquiring ABC Holdings, holding company for Brothers Contingency, for \$1.2m to be satisfied by the issue of 328,019 shares. ABC reported a loss of \$110,000 for 1990.

**DAVIS (GODFREY)** is seeking to change its name to Davis Group.

**HARTSTONE GROUP:** Acceptance of its 1-for-1 rights issue have been received in respect of 96.4 per cent of the shares on offer.

**LAPORTE** is to expand its business in printed wiring board chemicals into south east Asia via the purchase of Taipei-based Taiwan Specchem for \$4m (£2.8m).

**MICRO FOCUS** has purchased the source code and complete rights to CICS/VS8, a CICS application development and

testing environment, from Innovative Solutions for \$2m (£1.7m) cash.

**NO PROBLEMS:** The acquisitions of Pergamon Press by Elsevier and Camford Engineering by Hochtief are not to be referred to the Monopolies and Mergers Commission.

**PENTON** has bought The Economist Bookshops, which operates six shops on higher education campuses in London, for \$650,000 cash plus stock at valuation.

**RADIO CLYDE** is offering for sale its radio business, which is not to be referred to the Monopolies and Mergers Commission, has been declared unconditional following acceptance in respect of 99 per cent of the ordinary shares.

**REDLAND** said there were acceptance in respect of 99.19 per cent of its 14.5m shares in recent rights issue.

**RIS GROUP** (UK) has acquired environmental services company, has taken over Edinburgh and Belfast-based WJ Cairns and Partners.

**SENIOR ENGINEERING** has expanded its Spanish heat treatment operations with the purchase of Metalgrafica del

Centro, 76 per cent of Metalgrafica de Aragon and the outstanding minority holding of Industrias Trater.

**TOMORROWS LEISURE** is seeking authority to buy-in up to about 15 per cent of its shares.

**TRIBUNE NEWSPAPERS:** Rights issues raised \$972,884 before expenses. It was oversubscribed and some applications were scaled back.

**UNITED PROVINCIAL Newspapers,** a subsidiary of United Newspapers, is seeking offers for its Scottish regional newspaper business based in Greenock, Paisley and north of the Clyde. UPN is not committed to a sale but is prepared to sell at the right price. Withdrawal from Scotland will enable UPN to concentrate on profitable areas where growth is expected.

## UK COMPANY NEWS

## TR High Income joins the rights issue bandwagon

By Philip Coggan, Personal Finance Editor

TR High Income Trust yesterday became the latest investment trust to join the rights issue bandwagon with a 28.1m offer.

The issue is the first rights offer ever made by a trust managed by Touche Ross. The High Income Trust, which was launched in November 1989, was specifically targeted at private investors, who currently own about 75 per cent of the equity.

The attraction of income-bearing shares, particularly allied to the tax advantages of a Personal Equity Plan, means that the trust has regularly been able to trade at a premium to net assets.

There are two classes of shares in the trust, ordinary and subscription. The latter can be converted into ordinary

shares at 100p and are also entitled to a dividend of 1.5p.

Shareholders are being offered one new ordinary share for every two ordinary and/or subscription shares they currently hold and one new subscription share for every 10 ordinary and/or subscription shares they own. The issue is being underwritten by Credit Lyonnais Laing.

The ordinary shares are offered at 100p and the subscription shares at 27p each, compared with an estimated net asset value per ordinary share of 101p.

Directors said they intend to pay further interim dividends of 1.4p for July 31, October 31 and January 31 1992. The ordinary shares closed 4p lower at 106p and the subscription shares fell 2p to 30p.

## Two more directors resign from Next

By John Thornhill

TWO MORE directors have resigned from the board of Next, the fashion retailing group which recently said its Grattan mail order business to "stave off financial ruin".

Mr Brian Marber, a non-executive director who runs his own foreign exchange consultancy, resigned because of his "other business commitments".

However, no explanation was provided for the resignation of Mr John Roberts, the director listed in the company's annual report as being responsible for retail and property services.

A short statement from the company said Mr Roberts would remain with the company for two years in an advisory capacity.

The departures follow the resignation of Mr Peter Lomas, finance director, earlier this month. Mr Lomas is to become Gratian's finance and computer services director.

Following their departure the Next board will be left with two executive directors and four non-executive directors.

## AB Electronic sells Page offshoots to reduce gearing

By Andrew Bolger

AB ELECTRONIC Products, the Welsh electronic components manufacturer, has sold its aerospace and defence subsidiaries, Page Engineering (Holdings) and Page Aerospace, to reduce gearing and concentrate on its core business.

Both Page companies, based at Sunbury-on-Thames, have been bought for £6.25m by a consortium led by Lloyds Development Capital which includes the existing management.

Earlier this month AB passed its interim dividend after announcing a pre-tax loss of £3.02m for the six months to December, compared with profits of £5.38m last time. It also said group debt had increased to £26m, representing 50 per cent of shareholders' funds.

Page, which employs about 260 people, made pre-tax profits of £1.7m in the year to June 30 1990 on turnover of £12.1m. Pro-forma net assets at that date were £6.35m.

Sir Peter Phillips, AB chairman, said: "Page's markets have little overlap with the rest of the group. The board believed that it should be sold and the proceeds redeployed to assist the redevelopment of AB's core business."

Mr Peter Brooks, investment director of Lloyds Development Capital, said: "Despite the current risks in the aerospace sector, we believe, in the long term, Page offers an attractive investment. It has prudent sales forecasts, positive cash flow, solid forward order books and a strong experienced management team."

## PPP to launch life subsidiary

By Richard Lapper

PRIVATE PATIENTS Plan, the second largest UK medical insurer behind BUPA, is planning to launch a life insurance company, PPP Lifetime, in 1992, in a bid to increase its share of the market for private medical insurance and long-term care.

Six million people - about 12 per cent of the population - are currently covered by private health care schemes. With 985,000 subscribers (or policyholders) PPP provides cover for 1.6m people.

The high cost of medical

insurance premiums is one of the factors holding up the market's growth. The fact that subscribers must pay higher premiums as they get older has been a particular disincentive. PPP's life subsidiary will offer schemes designed to confront this difficulty by funding the increased cost of future premiums, smoothing the cost of medical insurance over an individual's life.

Mr Roy Forman, chief executive of PPP, also hopes to offer means of funding possibly expensive long-term residential

and nursing care in later life. PPP announced the new development when reporting that its premium income had grown by 19 per cent during 1990 to reach £365m, yielding a surplus of £16m, 80 per cent more than in 1989. The underwriting surplus amounted to £5.8m. Operating expenses rose by only 4 per cent per subscriber. Although reserves were hit by the fall in equity markets, they remained at £170m, a drop of 4 per cent, allowing the solvency margin to remain strong at 52 per cent.

## Notice to Lombard Depositors

The following interest rates will apply from 29/4/91

14 DAYS NOTICE		Minimum Initial deposit £5,000
	GROSS % PA	GROSS DAR % PA
When the balance is less than £5,000	8.25	8.51
When the balance is £5,000 and above	10.50	10.92
CHEQUE SAVINGS ACCOUNTS		
	GROSS % PA	GROSS DAR % PA
When the balance is £1,000 - £4,999	5.00	5.09
When the balance is £5,000 and above	7.25	7.45

The above gross rates assume no deduction of basic rate income tax. The corresponding annual rate (DAR) is achieved if the quarterly interest credited is not withdrawn.

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

Prices are determined for each month-day by the average of the following three prices:

- the average of the 10 highest and 10 lowest prices in the month
- the average of the 10 highest and 10 lowest prices in the month

## FT LAW REPORTS

# No breach of contract damages for berthing delay

WORLD NAVIGATION  
Court of Appeal (Lord Justice Parker, Lord Justice Staughton and Sir David Croom-Johnson): April 12 1991.

DAMAGES FOR breach of contract are assessed on the basis of what is required to put the plaintiff in the same position as if there had been no breach and the defendants had performed their obligations in the way they were contractually entitled to perform them, not as if there had been no breach and they had performed their obligations in the way they did in fact perform them. Accordingly, where cargo sellers delay the vessel's berthing for loading, but load within the sale contract time at a faster rate than the contractual minimum, the buyers cannot claim on the basis that loading would probably have been at that faster rate had there been no delay, and that the vessel would therefore have been freed earlier thus diminishing their demurrage costs.

The Court of Appeal so held when allowing an appeal by Ropack Enterprises SA, sellers of maize shipped on World Navigation, from Mr Justice Phillips's decision in favour of the claimant buyers, Ernst & Becher GmbH, on their appeal from the Board of Appeal of the Grain and Feed Trade Association (Gafsa).

LORD JUSTICE PARKER said that three contracts for the sale of maize provided for shipment by instalments in April, May and June 1988. The quantity to be shipped in June was 12,000 tonnes.

Each contract was on Gafsa 64 terms and Argentine Clause terms.

Clause 7 of Gafsa 64 provided that the vessel should load "in accordance with the custom at port of loading unless otherwise stipulated".

The Centro clauses provided that buyers should give 15 days' notice of readiness to load; and that once the vessel was berthed "sellers guarantee... a minimum average loading rate of 500 tonnes per weather working day, Sundays, holidays and Saturday afternoons excepted".

On May 24 1988, buyers nominated World Navigation to load the June portion.

She reached Zona Comon on June 13 and tendered readiness to load.

She would have berthed on June 25 had the shippers' loading documentation been in order. It was not. She was bypassed by other vessels next in line, and did not berth until July 18.

Between July 18 and July 22 she loaded 24,000 tonnes, including the 12,000-tonne June portion.

The buyers claimed the sellers were in breach of contract in not having the goods ready to load. They contended that damages consisted in demurrage they had had to pay under the charterparty by which they had provided the vessel.

The sellers disputed the claim. They said they were not in breach of any obligation and even if they were, the buyers had suffered no damage, because if the vessel had kept her turn on June 25 they would have had 45 days to load the 24,000 tonnes, and loading had been completed within that time. Alternatively, to load the 12,000 tonnes they had 24 days, and had completed it in time.

Arbitrators upheld the buyers' claim. The Gafsa Board of Appeal allowed an appeal on the ground that the vessel was less than 18 days late, whereas the contract allowed 24 days. Mr Justice Phillips allowed the buyers' appeal and awarded the award in the Board of Appeal for reconsideration in the light of his judgment. The award was now appealed.

Assuming that the sellers were in breach of contract in not having the necessary documentation in order on June 25, the first question was what was their obligation with regard to rate of loading once she had berthed?

The buyers contended that although the Centro clause provided for a minimum average of 500 tonnes per weather working day, the Gafsa obligation was to load according to the custom of the port. They said port custom might be to load by a method which would produce a faster rate.

Mr Justice Phillips rightly rejected that contention. The Gafsa provision was that the vessel was to load in accordance with port custom "unless otherwise stipulated". The Centro clause did otherwise stipulate.

Under that clause, a buyer would not be in breach if he obtained an average of at

least 500 tonnes a day.

Accordingly, the sellers were entitled, once the vessel was in berth, to take up to 45 counting days to load the complete cargo, counting days to load the three

Assuming again that the sellers were in breach in not having the documentation ready, the next question was on what basis should damages be assessed?

The buyers contended that, given that the vessel was delayed by the breach, the proper course was to consider what would probably have happened had there been no breach.

If the probability was that she would have loaded at the same rate as she actually did unload, they were entitled to damages because, but for the breach, the vessel would have been free and demurrage would have ceased to accrue by July 1.

Their damage, argued the buyers, was the demurrage incurred between July 1 and July 22 when the vessel was finally free. What they claimed was the value of the lost chance of freeing the vessel earlier.

The sellers contended that no damage had been suffered because, had the vessel berthed on June 25, they would not have been obliged to complete loading and free the vessel any earlier than they did.

In *Lovrack v Woods* (1967) 1 QB 278 Lord Denning MR in minority said that a wrongfully dismissed servant was entitled to bonuses he might reasonably have expected to receive, because the employer had deprived him of the chance of receiving them.

He said "he is entitled to compensation for the loss of the chance", even though he had no legal right to receive the bonuses.

The majority would have none of that. Lord Diplock said "The law is concerned with legal obligations only... not with expectations, however reasonable".

The buyers relied on *Paula Lee v Robert Zehil* (1983) 3 All ER 390, 397, 399 where the defendants wrongfully repudiated a contract to buy 18,000 garments each season from the plaintiff dress manufacturer. The plaintiff contended that damages should be assessed on the average of all his garments.

Mr Justice Mustill concluded that damages should be assessed in terms of such reasonable selection of garments as would "yield the lowest price".

Earlier, however, he said that inquiry into the plaintiff's actual position in face of the breach and his position if the contract had been performed, involved "identification of the promise, followed by a valuation of its promised worth to the promisee". He said each part of the inquiry might involve considering a choice which would have been open to the promisee.

Mr Justice Phillips identified the broken obligation as a single discrete obligation to procure appropriate loading documents. He said the inquiry concerned valuation.

He said that when assessing damages the board must ask how long loading would have taken had World Navigator berthed promptly; and that the question was to be answered, not by assuming that the sellers would have loaded at the slowest permissible rate, but by considering all factors that would have been likely to influence their conduct.

The judge was right that the breach was of a single discrete obligation. One must, however, consider the consequences to the buyers of the breach and what was required to put them in the same position as if it had not occurred.

In that event, loading would have begun to run on June 26. The sellers' obligation would have been to load in the number of counting days under the Centro terms, but no more.

They did so. Despite the breach the buyers got that to which they would have been entitled had there been no breach.

To accept the buyers' contention would be to make the sellers pay damages for failing to do that which they were not obliged to do.

In the light of those conclusions it was unnecessary to decide the extent of the sellers' obligation to enable the vessel to reach berth.

The appeal was allowed. The award of the Board of Appeal was affirmed. Their Lordships gave concurring judgments.

For the buyers: Martin Moore-Bick QC and Geraldine Clark (Richard Butler).

For the sellers: David Johnson QC and Mark Hazell QC (Alan Sinclair Roche & Temperley).

# AE MAGNUM. TRUCK OF THE YEAR.

One look at the Renault AE Magnum will stop most people in their tracks — but what was it that caught the imagination, as well as the eyes, of the 13 international judges? Quite simply: an outstanding combination of advanced technology, practical design and engineering. A vehicle which sets world class standards for operational efficiency, performance and comfort. Standards that others will struggle to match. In a nutshell, a profitable investment in the future. The Renault AE Magnum is much more than just a truck and more than just Truck of the Year. It is the first of a new generation.

## RENAULT TRUCKS — A LEGEND IN THE MAKING

Notice to the Holders of  
**£125,000,000 6 per cent.  
Guaranteed Exchangeable Bonds Due 1998**

Issued by  
**Bond Finance (Europe) Limited**  
(the "Issuer")

Exchangeable into Ordinary Shares of Allied-Lyons PLC  
and guaranteed on a subordinated basis by  
**Bond Corporation Holdings Limited**  
(the "Guarantor")

NOTICE IS HEREBY GIVEN to the holders (the "Bondholders") of the above Bonds (the "Bonds") constituted by a Trust Deed dated 30th March, 1991 (the "Trust Deed") and made between the Issuer (1), the Guarantor (2) and Bankers Trust Company Limited (the "Bankers") (3) (copies of which may be obtained from the Trustee) that on Friday 8th March, 1991 pursuant to Clause 15 of the Bonds, and an event within Condition 15(1)(a) of the Bonds, the Trustee gave notice to the Issuer and the Guarantor that the Bonds were immediately due and payable and demanded payment by the Issuer of all sums outstanding in respect of the Bonds by 3pm London time on Monday 11th March, 1991. The Issuer failed to pay such sums by the time specified (or at all) and accordingly on Monday 11th March, 1991, after 3pm London time, the Trustee elected by notice in writing to the Issuer and the Principal Paying and Exchange Agent named below to exercise its rights pursuant to Clause 9(C)(i) of the Trust Deed and Condition 6(1) of the Bonds. On Tuesday 12th March, 1991 pursuant to Clause 9(C)(i) of the Trust Deed and the said Condition 6(1) of the Bonds the Trustee contracted to sell the 93,095 Ordinary Shares of Allied-Lyons PLC then charged to it in trust for the Bondholders pursuant to the Trust Deed and which then formed the Exchange Property (as defined in the Trust Deed). The net proceeds of sale of the 93,095 Ordinary Shares of Allied-Lyons PLC were £205,423.93.

Pursuant to Clause 18(A)(ii) of the Trust Deed the costs, charges and expenses incurred by the Trustee under the Trust Deed including remuneration payable to the Trustee have been deducted from such net proceeds of sale and pursuant to Clause 9(C)(ii) of the Trust Deed the amount of £205,423.93 has been paid to the Principal Paying and Exchange Agent named below (whose receipt will be an absolute discharge to the Trustee) and is available to be distributed equally and rateably pursuant to Clause 9(C)(iii) of the Trust Deed and Condition 6(1) of the Bonds to holders of Bonds not surrendered for redemption by the close of business London time on Monday 11th March, 1991 ("Unpresented Bonds"). Subject as specified below the amount of £1,247.03 is payable to the holder of a Bond of nominal value £1,000.

Payments will be made in accordance with Condition 12 of the Bonds against due surrender of Unpresented Bonds with the relevant Unpresented Coupons (as defined in the Trust Deed) and for this purpose any Coupon expressed to be payable on or after Monday 11th March, 1991 will be treated as an Unpresented Coupon. If any Unpresented Bond is surrendered without all Unpresented Coupons an amount equal to the face value of any missing Unpresented Coupon will be deducted from the sum due for payment. Any amount so deducted will be paid in the manner provided in Condition 12 against surrender of the relevant Unpresented Coupon. The amount of such net proceeds of sale (less the amounts paid thereon in respect of the Trustee's costs, charges, expenses and remuneration as aforesaid) shall be treated for all purposes as the full amount owing by the Issuer in respect of the Unpresented Bonds (for this purpose treating any Coupon expressed to be payable on or after Monday 11th March, 1991 as an Unpresented Coupon). Pursuant to Clause 9(C)(iii) of the Trust Deed the Principal Paying and Exchange Agent will be instructed by the Trustee to pay any balance of such net proceeds of sale (less the amounts aforesaid) in respect whereof the relative Unpresented Bonds become void pursuant to Condition 14 of the Bonds to the Issuer.

## Dollar finishes below peak

THE DOLLAR touched a peak of DM1.7825 in Europe yesterday after the weekend Group of Seven meeting failed to press a united front aimed at limiting the currency's advance.

The market took the green light to push it higher, suggesting that the dollar was heading for DM1.80, but it ran out of steam before the close of trading in London. There was some uncertainty about direction in the early European morning, but when the central banks did not intervene, the dollar moved up sharply.

Its failure to break DM1.80 and a lack of follow through in the commercial market led to a retracement later in the day. The downward trend continued in New York, immediately after the London close, taking it down to DM1.7600, and leading to a recovery that the currency peaked at for the time being.

At the London close the dollar had climbed to DM1.7645, from DM1.7545, and to DM1.7645 from DM1.7545, and to DM1.7645 from DM1.7545.

The D-Mark remained among the group of weaker currencies in the European exchange rate mechanism, losing ground to

the pound, French franc and Italian lira. It also fell to Y77.80 from Y78.75 against the Japanese yen.

Uncertainty continues about the prospects for interest rates. A joint report from Germany's leading research institutes said continuing threats to inflation were no reason for tighter monetary policies from the Bundesbank.

Referring to the problems of unification, it argued that a rise in indirect taxation produces a one-off rise in prices and did not represent a sustained acceleration in inflation, while high budget deficits were also a factor for the Bundesbank to reduce the supply of money.

The report also warned that higher interest rates would slow economic growth and claimed that high wage claims, which outstripped productivity, would be inflationary only if financed by the injection of

extra funds from the central bank.

At the same time Mr Helmut Geiger, president of the German Association of Savings Banks, said a cut in rates will not take place this year, and "next year too there will be considerable easing."

At this week's securities repurchase agreement tender the Bundesbank has offered one-month money at an unchanged fixed rate of 8.60 per cent.

Sterling fell 90 points to 169.70 and declined to Y230.75 from Y231.50, and to SF2.4875 from SF2.4925, but rose to DM2.9675 from DM2.9625 and to FF10.0025 from FF9.9900.

The pound's index eased 0.1 to 90.7, but it rose to third from fourth strongest in the ERM. Trading was nervous ahead of Thursday's local government elections in England and Wales.

## Dow makes steady gains on March economic data

## Wall Street

ECONOMIC statistics which showed signs of a recovery in economic activity during March lifted share prices yesterday morning, writes Patrick Harrison in New York.

By 1:30 pm the Dow Jones Industrial Average was up 12.13 at 2,924.51, having risen steadily since the opening bell. The more broadly based Standard & Poor's 500 was up 1.38 at 380.40 by 1 pm. The Nasdaq composite of over-the-counter stocks, however, eased 0.61 to 494.03.

Turnover on the New York SE was low at just 78m shares by 1 pm. Advancing issues were outpacing declining issues in early afternoon trading by 738 to 671.

Share prices received their boost after the Commerce Department released figures showing that new home sales rose by 1 per cent in March, and by a revised 18.6 per cent in February. Statistics outlining a 0.2 per cent rise in personal income and a 0.6 per cent rise in personal consumption in March were also released.

Taken together, the data were better than expected, and suggested that economic activity is now picking up, albeit slowly.

Last week the figures might

have depressed prices, because they would have been interpreted as reducing the likelihood of further interest rate cuts. But yesterday investors reacted more favourably to good economic news because the Federal Reserve appears determined for the time being to leave monetary policy unchanged.

Especially slipped 11¢ to \$31 on volume of more than 1.5m shares after reporting a modest rise in first quarter profit to 26 cents a share from 23 cents a share.

A bigger decline was posted by A&P, the supermarket group, which fell 2¢ to \$47 in the wake of Friday night's warning that A&P's first quarter profits might be as much as 30 per cent below the \$1.33 a share earned at the same stage in 1990.

Vista Chemical climbed 2¢ to \$62 in response to the decision by RWE-DEA, the German utility group, to extend the deadline on its \$55-a-share offer for Vista from May 13 to May 21.

Playboy Enterprises jumped \$1 to \$94 after reporting an increase in fiscal third quarter operating profit from 3 cents a share a year ago to 3 cents a share.

Other stocks to rise on news of improved profits included Universal Corporation, up 2¢

at \$31.4, Unum, rising 1¢ to \$63.4, and Good Guys Inc, \$1 higher at \$43. The latter also announced a two-for-one stock split.

Outboard Marine dropped 3¢ to \$14 in the wake of its announcement late last week that it had closed two factories and made redundant about 150 staff because of a slump in demand.

## Canada

NERVOUSNESS over the first budget by Ontario's socialist-oriented New Democratic Party, due later in the day, sent Toronto stocks lower in sluggish midday trade. The composite index fell 13.3 to 3,498.9. Declines led advances by 206 to 159 on volume of 12m shares.

Variety Corp again topped the most active list, jumping 10 cents to C\$8.10 on volume of 3.95m shares.

Northern Telecom surged 3¢ to C\$41.4 on volume of 91,000 shares, continuing an upswing triggered by surprisingly good first quarter earnings last week.

Gold shares traded lower after Comex gold futures slipped. Placer Dome fell 3¢ to C\$14.1, American Barrick eased 2¢ to C\$21.4, Echo Bay dropped 2¢ to C\$9 and Lac Minerals slipped 3¢ to C\$8.9.

THE SHARP rise in the Johannesburg Stock Exchange (JSE) Industrial Index this year reminds local investment managers of the London adage, "sell in May and go away". The index has risen 25.8 per cent from 2,829 on January 16 to a record high of 3,559 on Friday. It slipped to 3,535 yesterday.

Industrial stocks, on an average price/earnings (p/e) ratio of 11.3 and an earnings yield of 8.8, are not expensive compared with some overseas shares, but they are high by South African standards.

Fund managers agree that the index, if not overvalued, is at least fully valued. They may not yet be thinking of selling, but they will certainly be doing less buying, as value is becoming increasingly difficult to find. Mr Roy McAlpine of Liberty Life comments: "Already we have seen heavier growth from January 1 in the financial and industrial [sectors] than even the most optimistic commentator would have forecast."

## EUROPE

## Activity slows in run-up to May Day break

BOURSES were mostly easier yesterday as activity slowed before the May Day holiday. Paris rose, but trading was thin, writes Our Markets Staff.

PARIS achieved a 1.3 per cent rise, but turnover was light, with only 1.1m shares traded. The CAC 40 index rose 22.98 to 1,797.35, ending below its day's high of 1,801.62.

Michelin picked up another Ffr2.80 to Ffr94.40, with 693,300 shares changing hands; the stock continued to benefit from Friday's brokers' comments. Elsewhere in the motor sector, Peugeot gained Ffr12 to Ffr77.00 on 138,550 shares.

Lyonnais des Eaux-Dumex added Ffr10 to Ffr578. The group has said it will increase its stake in Alfred McAlpine, the UK construction company, to 12 per cent from 9 per cent.

AXA Mid gained Ffr23 to Ffr1,076. The insurer, which took up their options, which expired that day, and immediately sold the underlying stock. Union Bank of Finland was also reported to have been a heavy seller, via Unibank, the brokers, of restricted shares in itself and Kymmene, the forest products group.

However, Mr Bradshaw believes that the new government's adherence to the previous administration's economic policy, as well as promising to lower interest rates, should help the stock market. The government aims to keep the Finnish market strong, avoid currency devaluation, cut interest rates and reduce the current account deficit.

Mr Bradshaw also believes the stock market is emerging from its 18-month trough. Investors have discounted the collapse in Finnish trade with the Soviet Union and are now looking forward to 1992 when the fortunes of Finnish companies are set to recover.

Australia provided the week's biggest rise, of 1.8 per cent in local currency terms, on prospects of further increases in wages, growth and inflation into 1992.

Lending support to the view that the market is due for a breather is the fact that the recent rise in the industrial index has been a rerating - there has been no commensurate rise in earnings or dividends - to which there must be an upward limit.

The outlook for corporate profits suggests that the market is looking two years ahead rather than one. Mr Neil Brown of stockbrokers Simpson McKie says it forecasts 5 to 6 per cent nominal growth in the profits of industrial companies in the next six to 12 months, compared with inflation of 13 to 14 per cent.

What, then, has moved the index? First, expectations of much improved earnings growth from next year onwards. Mr Rob Lee of the Board of Executors, a financial services group, notes: "In the new South Africa one can imagine that the industrial and commercial [sectors] are the ones that potentially can benefit."

Consumer-oriented compa-

## Johannesburg

Indices released

nies, such as Wooltru, Edgars, Pick N Pay and South African Breweries, which are well placed to capitalise upon growth in the urban black market, are all on p/e ratios of close to 30.

A second reason is positive economic sentiment. The recession has bottomed out much earlier than the previous two, meaning that earnings have

not been that badly hit. Mr Lee says it was mostly an inventory and investment recession. Consumer spending has stayed fairly buoyant throughout, and company balance sheets are in much better shape.

While businessmen remain cautiously optimistic about political developments, there is a more definite feeling that things can only improve on the economic front. Interest rates were lowered in March and, although no further cuts are expected in the short term, the trend is downwards. The gradual easing of trade and financial sanctions has also improved sentiment.

The buoyant performance of world markets has also helped the JSE Industrial Index, which traditionally tracks the Dow Jones Industrial Average. The index has benefited from two important features of the JSE: the poor liquidity in the industrial sector and the weight of institutional funds. Exchange control has long created a hothouse effect on the

JSE, with institutions being forced to chase a limited number of marketable stocks.

This has recently been compounded by other factors, including the decline in interest in mining shares as the gold industry's fortunes have waned, which has resulted in an increased focus on industrial stocks. The gold index fell from the year's high of 1,367 in mid-January to a low of 971 on February 25, a drop of 29 per cent. It has since rallied, and closed at 1,026 yesterday.

Also relevant have been the fall in disinvestment, an absence of big rights issues and no major privatisations. These factors, combined with bearish market sentiment, drove institutional liquidity to high levels at the end of 1990.

The return of these funds into equities over the past few months has been a significant factor in driving the market upward, as fund managers rushed to ensure that they did not miss out on the market's strong rise.

## ASIA PACIFIC

## Australia and South Korea rise

BUYING INTEREST lifted the Australian and South Korean markets yesterday, but investors were in a rush to take profits in Taiwan. Most other markets were mixed and without direction, partly owing to the closure of Tokyo for the first of its Golden Week holidays; it will also shut this Friday and Monday next week.

AUSTRALIA advanced on buying by US and domestic investors, encouraged by expectations of lower inflation and interest rates. The All Ordinaries index moved ahead 30.4 to 1,563.3 in turnover of A\$558m, similar to Thursday's level but below Friday's A\$712m, which was boosted by options-related trading.

There was active buying of BHP, which rose 40 cents to A\$12.70, and CRA, the mining group, up 55 cents to A\$13.80. Bundaberg Sugar, the subject of a A\$4.10 a share bid from Tate and Lyle, fell 11 cents to A\$3.86 after saying that Macquarie Bank had valued a possible sumit between the North-South Korean leaders encouraged investors.

SEOUL enjoyed its third successive session of strength, with the composite index climbing 5.89 to 644.60. Trading was active with Won17bn worth of shares exchanged, up from Saturday's Won12bn. Rumours of a possible summit between the North-South Korean leaders encouraged investors. TAIWAN fell sharply in the

most active day's trading since last June, as profit-taking weakened financial and textile shares. The weighted index lost 260.25 or 4.3 per cent to 5,728.00 in turnover of T\$106bn, up from Saturday's T\$59bn.

MANILA consolidated before the talks on US military bases in the Philippines. The composite index retreated 14.89 to 1,033.56 as turnover increased to 91m pesos from 86m.

HONG KONG recouped most of its early losses to close little changed. The Hang Seng index was finally off 1.08 at 3,624.72 after turnover of HK\$1,02bn, down from HK\$1,47bn. SINGAPORE was also mixed, the Straits Times Industrial index ending 0.23 up at 1,568.64.

By Antonia Sharpe

COMMENTS by Mr Alan Greenspan, chairman of the US Federal Reserve, that the current level of inflation did not justify further cuts in interest rates set the tone for equities last week.

The World Index, according to the FT-Actuaries series, declined 1.3 per cent in local currency terms, dragged lower by a 1.4 per cent fall in the US and a 1.7 per cent drop in Japan. The Tokyo fall was accompanied by shrinking volume before the Golden Week holidays, starting yesterday.

The worst performer of the week was Finland. The bourse dropped by 5.3 per cent in local currency terms in daily volume of less than Fm20m (\$49m) on uncertainty about the economic policy of the new centre-right government, which was formed last Friday.

Mr Peter Bradshaw of Swiss Bank Corporation in London says the market came under heavy selling pressure on Thursday, when volume expanded to Fm50.1m as investors

took up their options, which expired that day, and immediately sold the underlying stock. Union Bank of Finland was also reported to have been a heavy seller, via Unibank, the brokers, of restricted shares in itself and Kymmene, the forest products group.

However, Mr Bradshaw believes that the new government's adherence to the previous administration's economic policy, as well as promising to lower interest rates, should help the stock market. The government aims to keep the Finnish market strong, avoid currency devaluation, cut interest rates and reduce the current account deficit.

Mr Bradshaw also believes the stock market is emerging from its 18-month trough. Investors have discounted the collapse in Finnish trade with the Soviet Union and are now looking forward to 1992 when the fortunes of Finnish companies are set to recover.

Australia provided the week's biggest rise, of 1.8 per cent in local currency terms, on prospects of further increases in wages, growth and inflation into 1992.

Mr Bradshaw also believes the stock market is emerging from its 18-month trough. Investors have discounted the collapse in Finnish trade with the Soviet Union and are now looking forward to 1992 when the fortunes of Finnish companies are set to recover.
